Biography of Authors.....xxi

Table of Figures.....xxii

Chapter 1 Overview of Distributed Network Systems..... 1

 1.1 Distributed Systems..... 1

 1.2 Computer Networks 2

 1.2.1 Network History 2

 1.2.2 Network Architecture 3

 1.2.3 Network Fault Tolerance..... 4

 1.3 Protocols and QoS 5

 1.4 Software for Distributed Computing..... 6

 1.4.1 Traditional Client-Server Model..... 6

 1.4.2 Web-Based Distributed Computing Models..... 7

 1.4.3 Web-based Client-Server Computing..... 9

 1.5 The Agent-Based Computing Models 10

 1.6 Summary 12

 Exercises..... 13

Chapter 2 Modelling for Distributed Network Systems: The Client-Server Model 15

 2.1 Issues Leading to the Client-Server Model 15

 2.2 The Client-Server Model in a Distributed Computing System..... 16

 2.2.1 Basic Concepts 16

 2.2.2 Features and Problems of the Client-Server Model..... 17

 2.3 Cooperation between Clients and Servers..... 18

 2.3.1 Cooperation Type and Chained Server..... 18

 2.3.2 Multiple Servers 19

 2.4 Extensions to the Client-Server Model..... 20

 2.4.1 Agents and Indirect Client-Server Cooperation..... 20

 2.4.2 The Three-Tier Client-Server Architecture 22

 2.5 Service Discovery 24

 2.5.1 Hardwiring Computer Address..... 25

 2.5.2 Broadcast Approach 25

 2.5.3 Name Server Approach 26

 2.5.4 Broker-Based Location Lookup 27

 2.6 Client-Server Interoperability..... 28

 2.7 The Relationship 29

 2.8 Summary 30

Exercises.....	30
Chapter 3 Communication Paradigms for Distributed Network Systems.....	33
3.1 Introduction	33
3.2 Message Passing Communication	34
3.2.1 What is a Message?	34
3.2.2 Message-Passing Mechanisms	36
3.2.2.1 Basic Message-Passing Primitives	36
3.2.2.2 Direct and Indirect Communication Ports	37
3.2.2.3 Blocking versus Non-blocking Primitives.....	38
3.2.2.4 Buffered versus Unbuffered Message Passing Primitives.....	40
3.2.2.5 Unreliable versus Reliable Primitives	42
3.2.3 Structured Forms of Message-Passing Based Communication	44
3.3 Remote Procedure Calls	44
3.3.1 Executing Remote Procedure Calls	44
3.3.2 Basic Features and Properties.....	46
3.3.3 Parameters and Results in RPCs.....	47
3.3.3.1 Representation of Parameters and Results	47
3.3.3.2 Marshalling Parameters and Results	48
3.3.4 Client Server Binding	48
3.4 Message Passing versus Remote Procedure Calls	50
3.5 Group Communication.....	51
3.5.1 Basic Concepts	51
3.5.1.1 Group Structures	52
3.5.1.2 Behaviour Classification of Process Groups	53
3.5.1.3 Closed and Open Groups.....	53
3.5.2 Group Membership Discovery and Operations	53
3.6 Distributed Shared Memory	55
3.6.1 What is a Distributed Shared Memory (DSM) System?.....	55
3.6.2 Design and Implementation Issues	57
3.6.2.1 Structure.....	57
3.6.2.2 Synchronization Model	58
3.6.2.3 Consistency	58
3.6.2.4 Update Options.....	58
3.6.2.5 Granularity	59
3.6.2.6 Thrashing	60
3.6.3 Consistency Models.....	60
3.6.3.1 Sequential Consistency Model	60
3.6.3.2 Weak Consistency Model.....	61
3.6.3.3 Release Consistency Model.....	61
3.6.3.4 Discussion	62
3.7 Summary	63
Exercises.....	64
Chapter 4 Internetworking	65
4.1 Communication Protocol Architectures	65
4.1.1 The OSI Protocol Architecture	65
4.1.2 Internet Architecture.....	68

4.2 TCP/IP Protocol Suite	69
4.2.1 Communication Protocols	70
4.2.2 Network Layer Protocol: IP	71
4.2.2.1 IP Address	71
4.2.2.2 Domain Name System	73
4.2.3 Transport Layer Protocol : TCP and UDP	73
4.3 The Next Generation Internet Protocol: IPv6	75
4.3.1 Why IPv6?	75
4.3.2 IPv6 Features	76
4.4 Summary	77
Exercises	77

Chapter 5 Interprocess Communication using Message Passing 79

5.1 Developing Distributed Applications Using Message Passing	79
5.1.1 Communication Services in Message Passing	79
5.1.1.1 Connection-Oriented and Connectionless Communications	79
5.1.1.2 Reliable Communication	80
5.1.2 A Generic Framework for Distributed Applications	81
5.2 Sockets	81
5.2.1 Socket Abstraction	82
5.2.2 BSD Internet Domain Sockets	83
5.2.2.1 Socket Model	83
5.2.2.2 Internet Domain Socket Naming	84
5.2.2.3 Socket Types	85
5.3 Basic Socket System Calls	86
5.3.1 Some Special Functions	87
5.3.2 Socket Creation	90
5.3.3 Name Binding	90
5.3.4 Connection Establishment	91
5.3.5 Transfer Data and Discard Sockets	92
5.4 Examples in C	94
5.4.1 Using Stream Sockets: A Simple Example	94
5.4.2 Using Datagram Sockets: A Simple Example	98
5.5 Summary	102
Exercises	102

Chapter 6 TCP/UDP Communication in Java..... 105

6.1 Java Sockets	105
6.1.1 Java Net Package	105
6.1.2 The Socket Class	106
6.1.3 The ServerSocket Class	107
6.2 Building TCP Clients and Servers	109
6.2.1 Essential Components of Communication	109
6.2.2 Implementing a TCP Client Program	109
6.2.3 Implementing a TCP Server Program	111
6.3 Examples in Java	112
6.3.1 Exchange of Multiple Messages	112
6.3.2 Executing the Programs on Internet Hosts	115

6.3.3 Supporting Multiple Clients	118
6.4 A More Complex Example - A Java Messaging Program using TCP	119
6.4.1 The Design	120
6.4.2 The Implementation.....	121
6.4.3 The Programs	122
6.5 Datagram Communications in Java.....	127
6.5.1 Why Datagram Communication ?	127
6.5.2 Java Datagram-based Classes	128
6.6 Building UDP Servers and Clients	130
6.6.1 Sending and Receiving UDP Datagrams	130
6.6.2 Datagram Server	131
6.6.3 Datagram Client.....	132
6.7 Summary	133
Exercises.....	133
Chapter 7 Interprocess Communication using RPC.....	135
7.1 Distributed Computing Environment (DCE).....	135
7.1.1 The Architecture of DCE.....	135
7.1.2 The Role of RPC	137
7.1.3 The DCE Services	139
7.1.3.1 Directory Services	140
7.1.3.2 Security Services.....	141
7.1.3.3 Time Services.....	142
7.1.3.4 Distributed File Services	143
7.2 The DCE/RPC	145
7.2.1 DCE/RPC Facility	146
7.2.1.1 DCE Application Development.....	146
7.2.1.2 Location Broker	147
7.2.1.3 RPC Handle.....	147
7.2.1.4 Concurrent Programming Support	148
7.2.2 Related Tools.....	149
7.2.3 Exception Handling	150
7.3 SUN/RPC	151
7.3.1 Interface Definition Language.....	151
7.3.2 Security Services	153
7.3.3 Some Issues	154
7.3.3.1 Call Semantics.....	154
7.3.3.2 Exception Handling.....	154
7.3.3.3 Client-Server Binding	154
7.3.4 Critiques of Sun RPC	155
7.4 The Simple RPC.....	155
7.4.1 An Introduction of SRPC	155
7.4.2 Installation	157
7.4.3 The SRPC System Architecture	157
7.4.3.1 The System Library.....	157
7.4.3.2 The Location Server.....	158
7.4.4 The Stub and Driver Generator	159
7.4.4.1 Syntax.....	159
7.4.4.2 Semantics	160

9.2.1 Redundancy	218
9.2.2 Fault Avoidance Techniques	220
9.2.3 Fault Detection Techniques	220
9.2.4 Fault Tolerance Techniques	221
9.3 Software Fault Tolerance	224
9.3.1 Techniques for Software Fault-tolerance	225
9.4 Reliability Modelling	227
9.4.1 Combinatorial Models	227
9.4.2 Markov Models	230
9.4.3 Fault Coverage and Its Impact on Reliability	231
9.4.4 M-of-N Systems	232
9.5 Fault Tolerant Distributed Algorithms	233
9.5.1 Distributed Mutual Exclusion	233
9.5.2 Election Algorithms	236
9.5.3 Deadlock Detection and Prevention	236
9.5.3.1 Distributed Deadlock Detection	237
9.5.3.2 Distributed Deadlock Prevention	239
9.6 Replication and Reliability	240
9.7 Replication Schemes	242
9.7.1 Case Study 1: The Primary-Backup Scheme	243
9.7.2 Case Study 2: The Active Replication Scheme	245
9.7.3 Case Study 3: Two Particular Replication Schemes	247
9.8 The Primary-Peer Replication Scheme	249
9.8.1 Description of the Scheme	249
9.8.2 Replication Transparency	251
9.9 Replication Consistency	251
9.10 Summary	253
Exercises	253
Chapter 10 Security	255
10.1 Secure Networks	255
10.1.1 What is a Secure Network?	255
10.1.2 Integrity Mechanisms and Access Control	256
10.2 Data Encryption	256
10.2.1 Encryption Principles	256
10.2.2 Basic Encryption Techniques	259
10.2.2.1 Code Shifting	259
10.2.2.2 Code Mappings	260
10.2.2.3 Key Application	260
10.2.2.4 Bit Shifting	261
10.3 Cracking the Code	261
10.3.1 Cracking Organizations	261
10.3.2 Cracking Methods	262
10.4 Security Mechanisms on the Internet	263
10.4.1 Digital Signatures	263
10.4.2 Packet Filtering	264
10.4.3 Internet Firewall	264
10.5 Distributed Denial of Service Attacks	265
10.5.1 Launching a DDoS Attack	265

7.4.5 Implementation.....	161
7.4.6 An Application Example.....	162
7.5 Remote Method Invocation (RMI).....	163
7.5.1 RMI Architecture.....	163
7.5.2 RMI Implementation.....	164
7.5.3 Interfaces and Classes.....	167
7.6 An Interesting RMI Application.....	167
7.7 Summary.....	172
Exercises.....	173
Chapter 8 Group Communications.....	175
8.1 Introduction.....	175
8.2 Features of Group Communication.....	176
8.2.1 Message Delivery Semantics.....	177
8.2.2 Message Response Semantics.....	177
8.2.3 Message Ordering in Group Communication.....	178
8.3 Reliable Multicast Protocol.....	180
8.3.1 Reliable Multicast System.....	180
8.3.2 Design Issues.....	181
8.4 Multicast Approaches.....	182
8.4.1 Centralized Approach.....	182
8.4.2 Symmetrical Approach (Decentralized).....	185
8.4.3 Two-phase Approach.....	185
8.5 Multicast in Java.....	186
8.6 Total Ordered Multicast Protocol based on a Logical Ring.....	190
8.6.1 Achieving Total Ordering.....	190
8.6.2 Atomic Message Delivery.....	192
8.6.3 Membership.....	194
8.6.3.1 Membership Construction.....	194
8.6.3.2 Dynamic Membership.....	195
8.6.4 Fault Tolerance.....	196
8.6.4.1 Single Member Failure.....	196
8.6.4.2 Multiple Failures.....	198
8.6.4.3 Network Partitioning.....	198
8.6.5 Efficiency.....	199
8.7 Implementation Issues.....	200
8.7.1 System Structure and Communication Assumptions.....	201
8.7.2 State Machine Approach for Implementing RMP.....	202
8.7.3 Message Packet and Control Information.....	203
8.7.4 Ordering Protocol.....	205
8.7.5 Membership Protocol.....	207
8.8 Summary.....	209
Exercises.....	209
Chapter 9 Reliability and Replication Techniques.....	213
9.1 Basic Concepts.....	213
9.1.1 Fault Tolerance.....	213
9.1.2 Reliability and Availability.....	216
9.1.3 Failure Classification.....	217
9.2 Techniques to Achieve Reliability.....	218

7.4.5 Implementation	161
7.4.6 An Application Example	162
7.5 Remote Method Invocation (RMI)	163
7.5.1 RMI Architecture	163
7.5.2 RMI Implementation	164
7.5.3 Interfaces and Classes	167
7.6 An Interesting RMI Application	167
7.7 Summary	172
Exercises	173
Chapter 8 Group Communications	175
8.1 Introduction	175
8.2 Features of Group Communication	176
8.2.1 Message Delivery Semantics	177
8.2.2 Message Response Semantics	177
8.2.3 Message Ordering in Group Communication	178
8.3 Reliable Multicast Protocol	180
8.3.1 Reliable Multicast System	180
8.3.2 Design Issues	181
8.4 Multicast Approaches	182
8.4.1 Centralized Approach	182
8.4.2 Symmetrical Approach (Decentralized)	185
8.4.3 Two-phase Approach	185
8.5 Multicast in Java	186
8.6 Total Ordered Multicast Protocol based on a Logical Ring	190
8.6.1 Achieving Total Ordering	190
8.6.2 Atomic Message Delivery	192
8.6.3 Membership	194
8.6.3.1 Membership Construction	194
8.6.3.2 Dynamic Membership	195
8.6.4 Fault Tolerance	196
8.6.4.1 Single Member Failure	196
8.6.4.2 Multiple Failures	198
8.6.4.3 Network Partitioning	198
8.6.5 Efficiency	199
8.7 Implementation Issues	200
8.7.1 System Structure and Communication Assumptions	201
8.7.2 State Machine Approach for Implementing RMP	202
8.7.3 Message Packet and Control Information	203
8.7.4 Ordering Protocol	205
8.7.5 Membership Protocol	207
8.8 Summary	209
Exercises	209
Chapter 9 Reliability and Replication Techniques	213
9.1 Basic Concepts	213
9.1.1 Fault Tolerance	213
9.1.2 Reliability and Availability	216
9.1.3 Failure Classification	217
9.2 Techniques to Achieve Reliability	218

9.2.1 Redundancy	218
9.2.2 Fault Avoidance Techniques	220
9.2.3 Fault Detection Techniques	220
9.2.4 Fault Tolerance Techniques	221
9.3 Software Fault Tolerance	224
9.3.1 Techniques for Software Fault-tolerance	225
9.4 Reliability Modelling	227
9.4.1 Combinatorial Models	227
9.4.2 Markov Models	230
9.4.3 Fault Coverage and Its Impact on Reliability	231
9.4.4 M-of-N Systems	232
9.5 Fault Tolerant Distributed Algorithms	233
9.5.1 Distributed Mutual Exclusion	233
9.5.2 Election Algorithms	236
9.5.3 Deadlock Detection and Prevention	236
9.5.3.1 Distributed Deadlock Detection	237
9.5.3.2 Distributed Deadlock Prevention	239
9.6 Replication and Reliability	240
9.7 Replication Schemes	242
9.7.1 Case Study 1: The Primary-Backup Scheme	243
9.7.2 Case Study 2: The Active Replication Scheme	245
9.7.3 Case Study 3: Two Particular Replication Schemes	247
9.8 The Primary-Peer Replication Scheme	249
9.8.1 Description of the Scheme	249
9.8.2 Replication Transparency	251
9.9 Replication Consistency	251
9.10 Summary	253
Exercises	253
Chapter 10 Security	255
10.1 Secure Networks	255
10.1.1 What is a Secure Network?	255
10.1.2 Integrity Mechanisms and Access Control	256
10.2 Data Encryption	256
10.2.1 Encryption Principles	256
10.2.2 Basic Encryption Techniques	259
10.2.2.1 Code Shifting	259
10.2.2.2 Code Mappings	260
10.2.2.3 Key Application	260
10.2.2.4 Bit Shifting	261
10.3 Cracking the Code	261
10.3.1 Cracking Organizations	261
10.3.2 Cracking Methods	262
10.4 Security Mechanisms on the Internet	263
10.4.1 Digital Signatures	263
10.4.2 Packet Filtering	264
10.4.3 Internet Firewall	264
10.5 Distributed Denial of Service Attacks	265
10.5.1 Launching a DDoS Attack	265

13.3 Agent Advertisement and Solicitation	378
13.3.1 Foreign Agent and Home Agent.....	381
13.3.2 Mobile Node Considerations	382
13.3.3 Move Detection	383
13.3.4 Returning Home	384
13.4 Registration	384
13.4.1 Registration Overview	384
13.4.2 Responses to Registration Request and Authentication.....	386
13.4.3 Registration Related Message Format	387
13.4.3.1 Registration Request	387
13.4.3.2 Registration Reply	388
13.5 Mobile Routing (Tunnelling)	390
13.5.1 Packet Routing when Mobile Node is at Home.....	391
13.5.2 Packet Routing when Mobile Node is on a Foreign Link.....	391
13.5.2.1 Unicast Datagram Routing	391
13.5.2.2 Multicast Datagram Packets Routing	394
13.5.3 Mobile Routers and Networks	394
13.6 Case Study: Mobile Multicast using Anycasting	396
13.6.1 Problems with Mobile IP	396
13.6.2 Mobile Multicast Protocol (MMP)	398
13.6.3 Performance.....	402
13.6.3.1 Analysis.....	402
13.6.3.2 Simulation Model.....	403
13.6.3.3 Simulation Results	404
13.7 Summary	405
Exercises.....	405
Chapter 14 Distributed Network Systems: Case Studies ..	407
14.1 Distributed File Systems	407
14.1.1 What is a Distributed File System	407
14.1.2 A Distributed File System Example -- NFS	408
14.1.3 Processing User Calls	409
14.1.4 Exporting Files	410
14.1.5 The Role of RPC	411
14.1.6 Remarks.....	412
14.2 Network Operating Systems: Unix/Linux	412
14.2.1 UNIX System Concepts.....	412
14.2.1.1 The File System.....	412
14.2.1.2 Process Management.....	413
14.2.1.3 The Shell	413
14.2.2 The UNIX Processes	414
14.2.2.1 Process Address Spaces	414
14.2.2.2 Process Management System Calls	414
14.2.2.3 Process Context and Context-Switching	415
14.2.3 Linux as a UNIX Platform.....	416
14.2.4 Linux Networking	417
14.2.4.1 TCP/IP	417
14.2.4.2 PPP and SLIP	418
14.2.4.3 File Sharing with NFS.....	418

14.2.4.4 UUCP	418
14.2.5 Software Development in Linux	419
14.3 CORBA	419
14.3.1 What is CORBA?	419
14.3.2 The CORBA Architecture	420
14.3.3 Interface Definition Language (IDL)	424
14.3.4 An Example of CORBA for Java	425
14.4 DCOM	427
14.4.1 COM and DCOM	427
14.4.2 DCOM Facilities and Services	428
14.4.2.1 Location Transparency	428
14.4.2.2 Dynamic and Remote Object Activation	429
14.4.2.3 Security	429
14.4.2.4 Interfaces	430
14.4.2.5 Binary Interoperability	431
14.4.3 Applying DCOM	432
14.5 Summary	432
Exercises	432
Chapter 15 Distributed Network Systems: Current Development	435
15.1 Cluster Computing	435
15.1.1 Cluster Operating Systems	436
15.1.2 Reliable Server Clusters	439
15.2 Grid Computing	440
15.2.1 What is Grid Computing?	440
15.2.2 Background to the Grid	441
15.2.3 Grid Architectures and Infrastructures	444
15.2.3.1 Grid Architectures	444
15.2.3.2 Grid Components	444
15.2.4 Layered Grid Architecture: The Globus Architecture	447
15.2.5 Virtual Machine Environment: The Legion Architecture	449
15.2.6 Cycle Scavenging Schemes: The Condor System	452
15.2.7 Data Grids	453
15.2.7.1 Kangaroo	454
15.2.7.2 Legion	454
15.2.7.3 Storage Resource Broker	455
15.2.7.4 Globus Data Grid Tools	455
15.2.8 Research Issues and Challenges for Grids	457
15.2.8.1 Software Engineering Problems	457
15.2.8.2 Load Balancing and Scheduling	458
15.2.8.3 Autonomic Computing	459
15.2.8.4 Replication	459
15.3 Peer-to-Peer (P2P) Computing	461
15.3.1 What is Peer-to-Peer Computing?	461
15.3.2 Possible Application Areas for P2P Systems	462
15.3.3 Some Existing P2P Projects	462
15.3.4 P2P File Sharing and its Legal implications	464
15.3.4.1 P2P File Sharing Systems	464

	xv
15.3.4.2 Legal implications for P2P File Sharing	465
15.3.5 Some Challenges for P2P Computing	466
15.4 Pervasive Computing	466
15.4.1 Pervasive Computing Characteristics	466
15.4.2 Elite Care: An Application Using Pervasive Computing	468
15.4.3 The Challenges for Pervasive Computing	469
15.5 Summary	470
Exercises.....	470
References	472
Index.....	509

Table of Figures

Figure 2.1. The basic client-server model	17
Figure 2.2. Printing service (a service example)	18
Figure 2.3. Indirect client-server cooperation.....	21
Figure 2.4. Examples of three-tier configurations	22
Figure 2.5. An example implementation of the three-tier architecture	23
Figure 2.6. Service discovery -- broadcast approach.....	26
Figure 2.7. Service discovery -- name server and server location lookup	27
Figure 2.8. A distributed computing system architecture	29
Figure 3.1. CORBA CDR message	35
Figure 3.2. Time diagram of the execution of message-passing primitives.....	36
Figure 3.3. Send primitives: (a) blocking; (b) non-blocking	39
Figure 3.4. Blocked send primitive	39
Figure 3.5. Unbuffered and buffered message passing	41
Figure 3.6. Message passing; (a) unreliable; (b) reliable.....	42
Figure 3.7. Message-passing semantics. (a) at-least-once; (b) exactly-once	43
