|----------|---------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Rotational Alignment and Bandcrossings</b>                       | <b>1</b>  |
| 1.1      | Introduction                                                        | 1         |
| 1.2      | Rotational Alignment and Bandcrossings                              | 2         |
| 1.3      | Systematics of Bandcrossings                                        | 7         |
| 1.3.1    | Nomenclature for Quasiparticle Trajectories                         | 8         |
| 1.3.2    | Quasiparticle Trajectories                                          | 9         |
| 1.3.3    | Neutron $vi_{13/2}$ AB Bandcrossing Frequencies in Even–Even Nuclei | 10        |
| 1.3.4    | Evidence of Decreased Pairing Energies in Odd-N Nuclei              | 11        |
| 1.3.5    | Bandcrossings in $A \sim 120$ – $130$ Nuclei                        | 12        |
| 1.3.6    | Delayed Bandcrossings in odd-Z $A \sim 160$ – $170$ Nuclei          | 16        |
| 1.4      | Comments and Conclusions                                            | 20        |
|          | References                                                          | 21        |
| <b>2</b> | <b>Magnetic Rotation</b>                                            | <b>23</b> |
| 2.1      | Introduction                                                        | 23        |
| 2.2      | Magnetic Rotational Bands in the Pb Region                          | 25        |
| 2.2.1    | General Nuclear Structure in Light Pb Nuclei                        | 25        |
| 2.2.2    | The Magnetic Rotational Bands—Experimental Results                  | 26        |
| 2.2.3    | Theoretical Interpretation of the $\Delta I = 1$ Bands              | 44        |
| 2.2.4    | Band Termination                                                    | 49        |
| 2.3      | Antimagnetic Rotation                                               | 50        |
|          | References                                                          | 53        |
| <b>3</b> | <b>Triaxial Strong Deformation and Wobbling Motion</b>              | <b>55</b> |
| 3.1      | Introduction                                                        | 55        |
| 3.2      | Triaxial Strong Deformation                                         | 55        |
| 3.3      | Triaxiality and Wobbling Motion                                     | 59        |
| 3.4      | Experimental Results—Even-N Lu Isotopes                             | 61        |
| 3.5      | Discussion                                                          | 70        |
| 3.5.1    | Experimental Evidence for Wobbling Motion                           | 71        |
| 3.6      | Conclusion, Status and Outlook                                      | 76        |
|          | References                                                          | 78        |

|                                             |           |
