WINFRIED LAMPERT, Plön

Suspended Particulate Matter in Rivers and Estuaries

Proceedings of an International Symposium
held at Reinbek near Hamburg, Germany

edited by HARTMUT KAUSCH and WALFRIED MICHAELIS

With 355 figures and 68 tables

E. Schweizerbart'sche Verlagsbuchhandlung

Composition and properties of particulates

WALLING, D. E.: Suspended sediment transport by rivers: a geomorphological and hydrological perspective (Keynote lecture) (with 16 figures and 5 tables)	1– 27
LANGEDAL, M., OTTESEN, R. T. & BOGEN, J.: Time variation in the chemical composition of sediment in three Norwegian rivers – natural and anthropogenic causes (with 6 figures and 5 tables).	29– 39
NIEDERGESÄSS, R., EDEN, H. & SCHNIER, C.: Trace element concentrations in suspended particulate matter fractionated according to the settling velocity (with 5 figures and 3 tables)	41– 52
WILTSHIRE, K. H., GEISSLER, C.-D., SCHROEDER, F. & KNAUTH, H.-D.: Pigments in suspended matter from the Elbe estuary and the German Bight: their use as marker compounds for the characterisation of suspended matter and in the interpretation of heavy metal loadings (with 6 figures).....	53– 63
GRESIKOWSKI, S., GREISER, N. & HARMS, H.: Distribution and activity of nitrifying bacteria at two stations in the Ems estuary (with 8 figures).....	65– 76
TEN BRINKE, WILFRIED B. M.: The impact of primarily produced organic matter on the aggregation of suspended sediment (with 10 figures and 2 tables)	77– 91
KIES, L., FAST, T., WOLFSTEIN, K. & HOBERG, M.: On the role of algae and their exopolymers in the formation of suspended particulate matter in the Elbe estuary (Germany) (with 10 figures and 2 tables)	93–103
MALCHOW, H. & SIMON, J.: Non-linear dynamics and transport of interacting species in a model estuary	105–111
ELSTER, M., BOGEN, J. & OTTESEN, R. T.: Sediment transport, depositional processes and particle bound elements on the Vågåvatn delta, Norway (with 3 figures and 1 table).....	113–119
WITTE, G. & KÜHL, H.: Facilities for sedimentation and erosion measurements (with 4 figures).....	121–125
SPOTT, D. & GUHR, H.: The dynamics of suspended solids in the tidally unaffected area of the river Elbe as a function of flow and shipping (with 6 figures)	127–133
HOBERG, M. & NEUGEBOHRN, L.: Characterization of suspended particulate matter of the Elbe estuary (with 5 figures).....	135–139
SCHÄFER, B. & HARMS, H.: Occurrence of different ammonia-oxidizing bacteria in the river Elbe between Hamburg and Glückstadt (with 5 figures).....	141–148
SOWITZKI, S., SOBOTTKA, M. & HARMS, H.: The importance of suspended particulate matter for distribution and survival of fecal coliform bacteria in the River Elbe near Hamburg (with 6 figures)	149–155
MERCIER, P., ROBERT, M., PENVEN, M.-J., ELSASS, F., JAUNET, A.-M., MUXART, T. & LAGADEC, E.: A methodology to study particulate matter (with 11 figures)...	157–167

Spatial and temporal variation of particulate matter including scale effects

SYMADER, W.: Factors controlling riverine sediment associated chemistry (Keynote lecture) (with 3 figures)	169–177
--	---------

VAN LEUSSEN, W.: Erosion/sedimentation cycles in the Ems estuary (with 9 figures and 1 table)	179–193
GRABEMANN, I., KAPPENBERG, J. & KRAUSE, G.: Comparison of the dynamics of the turbidity maxima in two coastal plain estuaries (with 6 figures and 1 table) ..	195–205
FANGER, H.-U., AMANN, V., BROCKMANN, C., BROCKMANN, U., GEGE, P., HERBERS, D., JABLONSKI, R., KAPPENBERG, J., PRANGE, A. & RYBACZOK, P.: Spatial and tidal distributions of suspended particulate matter along the lower Elbe river – first results from a joint venture including airborne remote sensing, helicopter and shipborne investigations: BILEX' 93 (with 11 figures)	207–219
KOENIG, P. & FROHSE, A.: Dynamics and transport processes of suspended particulate matter in the German Bight (with 6 figures)	221–228
BIERL, R., SYMADER, W., GASPARINI, F., HAMPE, K. & UDELHOFEN, TH.: Particle associated contaminants in flowing waters – the role of sources (with 2 figures)	229–234
NIEDERGESÄSS, R., PRANGE, A. & SCHNIER, C.: Variations of trace element content in suspended particulate matter in the Elbe estuary (with 7 figures)	235–246
O'RIORDAN, C.A., MONISMITH, S.G. & KOSEFF, J.R.: The effects of near-bed hydrodynamics on model bivalve filtration rates (with 5 figures and 1 table) ...	247–254
SAAD, M.A.H. & HASSAN, E.M.: Distribution of suspended matter, as well as particulate iron and manganese in the Rosetta estuary of the Nile and the adjacent Mediterranean waters (with 6 figures and 3 tables)	255–269

Solutes/solids interactions

FÖRSTNER, U.: Solutes/solids interactions of metals in estuaries (Keynote lecture) (with 9 figures and 4 tables)	271–287
VAN BEUSEKOM, J.E.E. & DE JONGE, V.N.: Seasonal cycle in the interaction of suspended matter with dissolved aluminium and iron in the Ems estuary (with 5 figures).	289–293
PETERSEN, W., HONG, J., WILLAMOWSKI, C. & WALLMANN, K.: Release of trace contaminants during reoxidation of anoxic sediment slurries in oxic water (with 9 figures and 2 tables)	295–305
CORTESÃO, C. & VALE, C.: Seasonal and inter-annual variations of particulate metals in a river contaminated with mine drainage (Sado River, Portugal) (with 4 figures and 2 tables)	307–314
SCHMITT, J., GU, B., SCHORER, M., FLEMMING, H.-C. & MCCARTHY, J.J.: The role of natural organic matter as a coating on iron oxide and quartz (with 4 figures) .	315–322

Dynamics and transport processes

KAPPENBERG, J., SCHYMURA, G., KUHN, H. & FANGER, H.-U.: Spring-neap variations of suspended sediment concentration and transport in the turbidity maximum of the Elbe estuary (with 7 figures)	323–332
PENNDORF, K., JUSTIN, J. & KRÜGER, A.: Transport of suspended particulate matter in the Elbe estuary – parametrization of findings from the BILEX-campaign of spring 1990 (with 5 figures and 3 tables)	333–341
MÜLLER, A. & PULS, W.: Modelling of suspended matter transport in tidal rivers (with 7 figures)	343–351
MALCHEREK, A., MARKOVSKY, M. & ZIELKE, W.: Numerical modelling of settling velocity variations in estuaries (with 9 figures)	353–362
LAU, Y.L.: Modelling cohesive sediment settling (with 5 figures and 1 table)	363–371

WESTRICH, B. & DREHER, TH.: Numerical compartment model for contaminant sediment mobility description in rivers (with 10 figures and 2 tables)	373–380
PULS, W. & KÜHL, H.: A settling tube for measuring suspended matter settling velocities in the German Bight (with 7 figures and 1 table)	381–388
PROCHNOW, D., ENGELHARDT, CH. & BUNGARTZ, H.: On the settling velocity distribution of suspended sediments in the Spree River (with 10 figures and 2 tables)	389–400
ALBERTS, J.J. & GRIFFIN, CH.: Formation of particulate organic carbon (POC) from dissolved organic carbon (DOC) in salt marsh estuaries of the south-eastern United States (with 5 figures)	401–409
UNCLES, R.J. & STEPHENS, J.A.: Seasonal variability of fine-sediment in the Tamar estuary (with 1 figure and 1 table)	411–414
JULIEN, P.Y.: Sand particle interaction in moving bed layers (with 2 figures and 1 table)	415–420
SIVAKUMARAN, K., ROSSELLI, A.T. & BALLOFFET, A.: Particulate matter transport in the proposed Sea Level Canal, Panama (with 11 figures and 4 tables)	421–438
ROSS, J. & KROHN, J.: Computation of suspended matter in a Wadden Sea bight (Königshafen, Sylt) (with 10 figures)	439–447
GALAS, J.: Depositional processes and suspension of particulate organic matter in a high mountain stream above the timber line (with 5 figures and 1 table)	449–454
KERN, U. & WESTRICH, B.: Sediment dynamics in a lock-regulated section of the Neckar river, Germany (with 3 figures and 1 table)	455–460
EDELVANG, K.: A study of the significance of flocculation for the in situ settling velocities of suspended particles in a tidal channel (with 6 figures)	461–467
ENGELHARDT, CH., BUNGARTZ, H., THIELE, M., KRÜGER, A. & PROCHNOW, D.: Settling behavior of particulate matter in a slow flow section of a Spree River branch (with 6 figures and 1 table)	469–473
NEHLS, R., GREISER, N. & HARMS, H.: Changes in amount and composition of suspended particulate matter in relation to river discharge in the River Elbe near Hamburg Harbour, indicating changing transport characteristics (with 12 figures)	475–484
ODUYEMI, K.: Sediment transport in the Tamar estuary (with 4 figures)	485–490
ENGGROB, H.G. & OLESON, K.W.: A hybrid sediment transport modelling system for rivers and estuaries (with 3 figures and 1 table)	491–495
SEIBT-WINCKLER, A. & SCHIRMER, F.: Measurements with a three frequency echo sounder for the detection of suspended matter in a river estuary (with 10 figures)	497–506
HAMM, A., GLASSMANN, M. & LIEPELT, A.: Transport of particulate matter in an Alpine river (River Salzach) and its importance for river ecology (with 6 figures and 2 tables)	507–513

Environmental impacts

HOROWITZ, A.J.: Spatial and temporal variations in suspended sediment and associated trace elements – requirements for sampling, data interpretation, and the determination of annual mass transport (Keynote lecture) (with 14 figures and 4 tables)	515–536
FOSTER, I.D.L., CHARLESWORTH, S.M. & PROFFITT, S.B.: Sediment-associated heavy metal distribution in urban fluvial and limnic systems; a case study of the River Sowe, U.K. (with 2 figures and 4 tables)	537–545

FERREIRA, A.M. & VALE, C.: The differences of PCB and lipid levels between settling/ resuspended materials and surface sediments of the Sado estuary (with 3 figures and 3 tables)	547–552
BOTZAN, D., TOMOIAGA, G. & BOTZAN, T.: Environmental effects of alluvial trans- port over the Romanian Danube sector and its catchment area (with 2 figures) ..	553–556
SINGH, R.B. & PANDEY, B.W.: Environmental monitoring of particulate matter and pollution in major rivers of India (with 1 figure and 2 tables)	557–561
YANG, W.: Distribution of metals, causal factors and areal sampling in the Urumqi area, northwestern China (with 2 figures and 2 tables)	563–569
List of participants	571–573
