ESTUARINE SHORES

Evolution, Environments and Human Alterations

Edited by

Karl F. Nordstrom

*Institute of Marine and Coastal Sciences,
Rutgers University, USA*

and

Charles T. Roman

*National Biological Service,
University of Rhode Island, USA*

JOHN WILEY & SONS

Chichester · New York · Brisbane · Toronto · Singapore

Contents

List of contributors	xvii
Preface	xxi
Acknowledgements	xxiii

Chapter One: Environments, processes and interactions of estuarine shores – *Charles T. Roman and Karl F. Nordstrom*

1.1 Introduction	1
1.2 Environments, evolution and processes	2
1.3 Estuarine shore linkages	7
1.4 Conservation and management of estuarine shores	8
1.5 Prospect	9

PART 1: EVOLUTION OF ESTUARINE SHORES 13

Chapter Two: Evolution of the shoreline of the Dee estuary, United Kingdom – *Kenneth Pye*

2.1 Introduction	15
2.2 Environmental setting and process regime of the Dee estuary	16
2.3 Nature of the estuarine shoreline	23
2.4 Shoreline changes in the historical period	26
2.5 Conclusions	34

Chapter Three: Evolution of estuarine shoreline systems in Sierra Leone – *Edward J. Anthony*

3.1 Introduction	39
3.2 General setting of estuarine systems	40
3.3 Estuarine morphology and sedimentary environments	41
3.3.1 Sherbro Bay	41
3.3.2 The Scarcies estuary	44

3.4 Estuarine shoreline progradation: the role of long-term hydrological, geomorphologic and ecological interactions	47
3.4.1 Tidal flat accretion and progradation of estuarine shoreline systems	48
3.4.2 Tidal flat accretion and ecological change in estuarine systems in Sierra Leone	55
3.5 The present geomorphic status of estuarine systems in Sierra Leone and their response to future sea level rise: a preliminary assessment	57
3.6 Conclusions	58

Chapter Four: Shoreline changes in the bodden coast of northeastern Germany – *Reinhard Lampe*

4.1 Introduction	63
4.2 The genesis of the smoothed bodden coast	64
4.3 Changes in hydrography following isolation of the boddens from the Baltic	69
4.3.1 Wave influence on the bodden coasts	69
4.3.2 Water exchange between the boddens and the Baltic Sea	69
4.3.3 Coast formation by erosion, accretion and phytogenic sedimentation	71
4.4 Examples of processes and forms of coastal evolution	74
4.4.1 The genesis of the bodden waters to the south of the Fischland–Darss–Zingst peninsula	74
4.4.2 Natural and technologically induced changes on the south coast of the Greifswald Bodden	78
4.4.3 The phytogenic sedimentation coast in the Grabow and the Barth Bodden	82
4.5 Conclusions	86

Chapter Five: Late Quaternary infill of macrotidal estuaries in northern Australia – *Colin Woodroffe*

5.1 Introduction	89
5.2 Regional setting	93
5.3 Quaternary sea-level change in the Australian region	94
5.4 Stratigraphy and development of estuarine and coastal plains	98
5.5 Changing environments during the Holocene highstand	101
5.5.1 Coastal plain progradation	102
5.5.2 Floodplain accretion	103
5.5.3 Channel migration and abandonment	104
5.6 Sea level and other boundary conditions	105

Chapter Six: Geomorphology and ecology of New Zealand shallow estuaries and shorelines – *Terry R. Healy, Russell Cole and Willem de Lange*

6.1	Introduction	115
6.2	Previous estuarine research	120
6.2.1	Introduction	120
6.2.2	Hydrodynamics and geomorphology	120
6.3	Physiography of New Zealand estuaries	122
6.3.1	Drowned river valleys	122
6.3.2	Barrier-enclosed estuaries and estuarine lagoons	124
6.3.3	River-mouth estuaries	126
6.3.4	Structurally and tectonically influenced estuaries	126
6.3.5	Glacially excavated fjords	127
6.4	Ecology of New Zealand estuarine shores	128
6.4.1	Organisms of estuaries	129
6.4.2	Spatial variability	129
6.4.3	Temporal variability	132
6.4.4	Hard shores	133
6.4.5	Faunal interactions on estuarine shores	134
6.5	Interrelations of hydrodynamics, sediments and ecology of New Zealand shallow sub-tidal and estuarine shores	135
6.5.1	Estuarine beach form and sediments	135
6.5.2	Hydrodynamics	137
6.5.3	Assemblages of estuarine lagoon beaches and intertidal flats	138
6.6	Examples of human-induced impacts on the shoreline sedimentation and ecology of estuarine lagoons	140
6.6.1	Impact of Kaituna River diversion from Maketu Estuarine Lagoon	140
6.6.2	Maintenance of a beach downdrift from a port	141
6.7	Threats to shallow estuarine shoreline ecology	143
6.8	Future tasks for New Zealand shallow estuarine research	144

PART 2: ENVIRONMENTS AND PROCESSES **155**

Chapter Seven: Hydraulic processes affecting the morphology and evolution of the Westerschelde Estuary – *Jan H. van den Berg, Claire J.L. Jeuken and Ad J.F. van der Spek*

7.1	Introduction	157
7.2	Palaeogeographical background	160
7.3	Hydraulic evolution of the tidal basin	163
7.4	Long-term sediment import and tidal asymmetry	167
7.5	Recent morphological behaviour of the channels and shoals in the Westerschelde	173

7.6 Further deepening of channel bars in the near future	181
7.7 Conclusions	182

Chapter Eight: The geomorphology of mudflats – John S. Pethick

8.1 Introduction	185
8.2 Estuaries and mudflats	186
8.2.1 Mudflat location and extent	186
8.2.2 Tidal resonance models	187
8.2.3 Tidal prism models	190
8.2.4 Cross-sectional form	191
8.2.5 Sedimentary processes	192
8.3 Waves on mudflats	193
8.3.1 Waves and intertidal profiles	193
8.3.2 Morphological response to wave return intervals	194
8.4 Temporal changes	196
8.4.1 Short-term periodic changes	196
8.4.2 Medium-term changes	199
8.4.3 Long-term changes	203
8.5 Mudflats and saltmarshes	204
8.6 Further Research	206
8.6.1 Mudflats and estuarine morphodynamics	207
8.6.2 Process studies	207
8.6.3 Temporal development	207
8.6.4 Predictive models	207
8.7 Conclusion	208

Chapter Nine: Wave and current processes and beach changes on a microtidal lagoonal beach at Fire Island, New York, USA –

Karl F. Nordstrom, Nancy L. Jackson, James R. Allen and

Douglas J. Sherman

9.1 Introduction	213
9.2 Field sites and methods	215
9.2.1 Field sites	215
9.2.2 Data collection and analysis	217
9.3 Results	220
9.3.1 Wind, wave and current characteristics	220
9.3.2 Beach characteristics	223
9.3.3 Sediment transfers from foreshore to bars	226
9.4 Discussion	228
9.5 Summary and implications	229

Chapter Ten: Shoreline dynamics on the windward and leeward shores of a large temperate estuary – J. Court Stevenson and Michael S. Kearney

10.1 Introduction	233
10.2 Shoreline change and sea level rise	236
10.3 Impact of sea level rise on marshes	238
10.3.1 Submerged upland marshes	239
10.3.2 Estuarine meander and tidal fresh marshes	240
10.3.3 Processes of interior pond formation	241
10.4 Rates of shore erosion	243
10.4.1 Processes of shoreline retreat	246
10.4.2 Processes of island formation	248
10.5 Chesapeake sediment balance: an estuary at the crossroads	249

Chapter Eleven: The role of seagrasses in nearshore sedimentary processes: a review – Mark S. Fonseca

11.1 Introduction	261
11.2 The presence of seagrass cover and its geomorphological consequences	262
11.3 Factors affecting seagrass coverage: consequences for sedimentary processes	264
11.3.1 A short history: studies of seagrass coverage and hydrology	264
11.3.2 Alternative sources of bed pattern	268
11.4 Hydrodynamics of seagrass beds and associated processes	269
11.4.1 Effect of fluid motion on seagrasses and sedimentary processes	269
11.4.2 Role of root-rhizome system in seagrass bed roughness/stability	277
11.4.3 Effects of sedimentation on seagrasses	277
11.5 New directions: contributions from landscape ecology	280

Chapter Twelve: Interception of freshwater and nitrogen transport from upland to coastal waters: the role of saltmarshes – Brian L. Howes, Peter K. Weiskel, Dale D. Goehring and John M. Teal

12.1 Introduction	287
12.2 Site descriptions	289
12.3 Whole marsh nitrogen balance	289
12.4 Pathways of freshwater entry	294
12.5 Nitrogen dynamics of marsh subsystems and marsh nitrogen balance	300
12.6 Conclusions	306

Chapter Thirteen: Direct nekton use of intertidal saltmarsh habitat and linkage with adjacent habitats: a review from the southeastern United States – Carole C. McIvor and Lawrence P. Rozas	
13.1	Definitions, regional marsh characterization and large-scale patterns 311
13.1.1	Introduction 311
13.1.2	Characterization of saltmarsh development in different ecoregions 312
13.1.3	Major families using marsh-surface habitats 314
13.1.4	Patterns of resident versus transient use among marsh microhabitats 315
13.2	Smaller scale correlates of patterns of composition and numerical abundance 320
13.2.1	Subtidal geomorphology 320
13.2.2	Stream order 321
13.2.3	Submergence time (elevation) 323
13.2.4	Edge (drainage density) 324
13.3	Landscape-level processes 327
13.3.1	Linkage of adjacent habitats 327
13.3.2	Nekton as agents of export from the intertidal marsh 329
13.4	Summary 329
 Chapter Fourteen: Fishes of polyhaline estuarine shores in Great Bay–Little Egg Harbor, New Jersey: a case study of seasonal and habitat influences – Kenneth W. Able, David A Witting, Richard S. McBride, Rodney A. Rountree and Kelly J. Smith	
14.1	Introduction 335
14.2	Methods 336
14.2.1	Habitat evaluation methods 337
14.3	Results and discussion 341
14.3.1	Seasonal dynamics 341
14.3.2	Faunal composition 343
14.3.3	Faunal composition by habitat 346
14.3.4	Linkages across the estuarine shore 348
14.4	Conclusions 348
 Chapter Fifteen: Ecological dynamics of a tropical intertidal mudflat community – José A. Vargas	
15.1	Introduction 355
15.2	Seasonal trends in population and community dynamics 357
15.3	Ecological roles at different latitudes 360
15.4	Experimental manipulation of the community 362
15.5	Tidal flats and linkages to nearby ecosystems 366

PART 3: HUMAN ALTERATIONS AND MANAGEMENT**373****Chapter Sixteen: Changes in the morphology and vegetation along the human-altered shoreline of the Lower Elbe – Annick Garniel and Ulrich Mierwald**

16.1 Introduction	375
16.2 The Elbe estuary	376
16.2.1 Morphology	376
16.2.2 Geology	376
16.2.3 Climate and hydrology	379
16.3 Historical development of the shoreline	379
16.3.1 Postglacial movements of sea level	379
16.3.2 Fluvial morphodynamics	381
16.3.3 Morphodynamics through storm surge events	381
16.3.4 Human influences	383
16.4 The vegetation of the Lower Elbe	387
16.4.1 Natural vegetation	387
16.4.2 Human-altered vegetation environments	390
16.5 Restoration of the Alte Süderelbe	393
16.6 Conclusions	394

Chapter Seventeen: Stabilization on the shoreline of Raritan Bay, New Jersey – Nancy L. Jackson

17.1 Introduction	397
17.2 Raritan Bay	398
17.2.1 Study area	400
17.3 Methods	402
17.4 Results	403
17.4.1 Development history	403
17.4.2 Shoreline characteristics	405
17.4.3 Beach characteristics	409
17.5 Implications	415
17.6 Conclusions	417

Chapter Eighteen: Management and use of dynamic estuarine shorelines – J.P. Doody

18.1 Introduction	421
18.2 Implications for management (the coastal squeeze)	422
18.2.1 Human influences – habitat loss	422
18.2.2 Loss of habitat – erosion from the sea	423
18.3 Management options	423

18.3.1 Strengthening the existing line of defence	424
18.3.2 Accretion enhance	426
18.3.3 Storm surge/energy generation barriers	427
18.3.4 Tidal exclusion barrages	427
18.3.5 Set back and managed retreat	427
18.4 Discussion	428
18.5 Conclusion – the case for managed retreat	430
18.5.1 Research needs	430

Chapter Nineteen: A policy orientation toward estuarine shores –

Richard H. Burroughs

19.1 Introduction	435
19.2 The policy process	436
19.3 Problem definition	438
19.4 Problem definition in the Thames Estuary	439
19.4.1 Displacement as a problem definition	439
19.4.2 Treatment as a problem definition	440
19.4.3 Problem evolution	440
19.5 Program evaluation	441
19.6 Program evaluation in Narragansett Bay	443
19.6.1 Environmental monitoring in program evaluation	443
19.6.2 Cause in program evaluation	444
19.7 Conclusions	445

Chapter Twenty: Natural and legal shoreline buffers –

Jonathan D. Phillips

20.1 Introduction	449
20.2 Types and purposes of buffers	450
20.3 Natural buffers	452
20.3.1 Hydraulic model	452
20.3.2 Detention model	453
20.3.3 Subsurface travel time model	454
20.3.4 Ecological buffers	455
20.4 Natural buffers in coastal North Carolina	455
20.4.1 Study area	455
20.4.2 Hydraulic buffers	456
20.4.3 Detention time buffers	457
20.4.4 Subsurface travel time	457
20.4.5 Water quality buffers: synthesis	459
20.4.6 Ecological buffers	460
20.5 Legal buffers	460
20.6 A comparison of natural and legal buffers	462

20.7 Conclusions	463
CONCLUSIONS	467
Chapter Twenty-one: Emerging research needs related to interactions on estuarine shores – Karl F. Nordstrom and Charles T. Roman	
21.1 Introduction	469
21.2 Hydrodynamic, morphologic and biotic linkages	470
21.3 Human impacts and human-altered environments	473
21.4 Environmental regulations, preservation and restoration	475
21.5 Specification of research questions	475
21.5.1 Hydrodynamic and morphodynamic studies	476
21.5.2 Biotic linkages	476
21.5.3 Identifying the changing nature of linkages	476
21.5.4 Human impacts and human-altered environments	477
21.5.5 Environmental regulations, preservation and restoration	477
21.6 Concluding statement	478
Index	481
