CONTROLLED DRUG RELEASE OF ORAL DOSAGE FORMS

Professor JEAN-MAURICE VERGNAUD
Faculty of Sciences, University of Saint-Etienne,
France

ELLIS HORWOOD

NEW YORK LONDON TORONTO SYDNEY TOKYO SINGAPORE

Table of contents

PREFACE.....	vii
ACKNOWLEDGEMENTS.....	xiii
1 THE DIFFUSION EQUATIONS AND BASIC CONSIDERATIONS.....	1
1.1 Introduction.....	1
1.1.1 Process of diffusion.....	2
1.1.2 Diffusion of a substance through a polymer.....	2
Polymer in the rubbery state (Case I).....	2
Polymer in the glassy state (Case II).....	3
Absorption of liquid in Case III.....	3
1.1.3 Steady and non-steady conditions.....	3
1.1.4 Initial conditions.....	4
1.1.5 Boundary conditions.....	4
1.1.6 Volume of the surrounding atmosphere and partition factor..	5
1.2 Equations of diffusion for various shapes.....	6
1.2.1 Equations of diffusion for a thin sheet.....	6
1.2.2 Equations of diffusion for a rectangular parallelepiped.....	7
Isotropic materials.....	7
Anisotropic materials.....	8
1.2.3 Cylinder of infinite and finite length.....	9
Cylinder of infinite length.....	9
Cylinder of finite length.....	9
1.2.4 Radial diffusion in a sphere.....	10
1.3 Methods of solution when the diffusivity is constant.....	10
1.3.1 Kinds of solution.....	10
1.3.2 Method of separation of variables.....	11
1.3.3 Method for the Laplace transform.....	15
1.3.4 Method of reflection and superposition.....	17
Plane source.....	17
Reflection at a boundary.....	19
Extended initial distribution of the substance.....	19
2 MATHEMATICAL TREATMENT OF DIFFUSION IN A PLANE SHEET.....	21
2.1 Introduction.....	21

8.2	Radial diffusion through a sphere with constant diffusivity.....	150
8.2.1	Infinite coefficient of matter transfer on the surface.....	150
8.2.2	Finite coefficient of matter transfer on the surface.....	154
8.3	Radial diffusion through a sphere with concentration-dependent diffusivity.....	155
8.3.1	Infinite coefficient of matter transfer on the surface.....	156
8.3.2	Finite coefficient of matter transfer on the surface.....	157
8.4	Hollow sphere with constant concentration on the internal surface, and constant diffusivity.....	159
8.4.1	Infinite coefficient of matter transfer on the external surface.....	160
8.4.2	Finite coefficient of matter transfer on the external surface..	161
8.5	Hollow sphere with constant concentration on the internal surface, and concentration-dependent diffusivity.....	162
8.5.1	Infinite coefficient of matter transfer on the external surface.....	162
8.5.2	Finite coefficient of matter transfer on the external surface..	163
8.6	Conclusions.....	164
9	NUMERICAL ANALYSIS WITH CYLINDERS.....	167
9.1	Introduction.....	168
9.2	Solid cylinder of infinite length.....	169
9.2.1	Constant diffusivity.....	173
9.2.2	Concentration-dependent diffusivity.....	176
9.3	Hollow cylinder of infinite length.....	177
9.3.1	Constant diffusivity.....	177
9.3.2	Concentration-dependent diffusivity.....	179
9.4	Solid cylinder of finite length.....	181
9.4.1	Constant diffusivity.....	181
9.4.2	Concentration-dependent diffusivity.....	193
9.5	Conclusions.....	196
10	DRUG DELIVERY FROM DOSAGE FORMS CONSISTING OF A DRUG DISPERSED IN A NON-ERODIBLE POLYMER.....	199
10.1	Introduction and definitions.....	199
10.1.1	Problems of the drug passing through the body.....	199
10.1.2	Pharmacokinetics, pharmacodynamics and biopharmaceutics.....	203
10.1.3	Conventional dosage forms.....	205
10.1.4	Oral therapeutic systems.....	206
10.1.5	Simple monolithic devices with a polymer matrix.....	208
10.1.6	Processes with a double matter transfer.....	212
10.2	Drug-Eudragit sheet in gastric liquid.....	215
10.2.1	Introduction.....	215
10.2.2	Theoretical aspects.....	216
10.2.3	Experimental.....	219
10.2.4	Results obtained with Eudragit as polymer matrix.....	221
10.2.5	Conclusions with Eudragit as polymer matrix.....	224
10.3	Drug-Carbopol sheet in gastric liquid.....	225
10.3.1	Introduction.....	225
10.3.2	Theoretical aspects.....	226
10.3.3	Experimental.....	226
10.3.4	Results with Drug-Carbopol devices.....	227

10.3.5	Conclusions with Drug-Carbopol devices.....	230
10.4	Effect of pH on drug release.....	231
10.4.1	Introduction.....	231
10.4.2	Theoretical aspects.....	232
10.4.3	Experimental.....	233
10.4.4	Results with a Drug-Eudragit sheets.....	234
10.4.5	Conclusions.....	240
10.5	Spherical Drug-Eudragit beads in gastric liquid.....	242
10.5.1	Introduction.....	242
10.5.2	Theoretical aspects.....	242
10.5.3	Experimental.....	246
10.5.4	Results with Drug-Eudragit spheres.....	246
10.5.5	Conclusions.....	251
11	DRYING OF DOSAGE FORMS MADE OF A DRUG DISPERSED IN A POLYMER MATRIX.....	261
11.1	Introduction.....	261
11.2	Drying dosage forms in a surrounding atmosphere of infinite volume..	263
11.2.1	Theoretical.....	263
11.2.2	Experimental.....	267
11.2.3	Results with a constant temperature.....	268
11.2.4	Effect of temperature.....	274
11.3	Drying with a programmed temperature	277
11.3.1	Theoretical.....	279
11.3.2	Experimental.....	280
11.3.3	Results with a programmed temperature.....	280
11.4	Drying in a surrounding atmosphere of finite volume.....	286
11.4.1	Theoretical of drying in a surrounding atmosphere of finite volume.....	286
11.4.2	Experimental.....	291
11.4.3	Results.....	291
11.5	Drying with a controlled vapour pressure.....	300
11.5.1	Theory of the process with controlled vapour pressure.....	301
11.5.2	Simulation of the process.....	302
11.6	Conclusions.....	308
12	DRUG DELIVERY FROM DOSAGE FORMS CONSISTING OF A DRUG DISPERSED IN AN ERODIBLE POLYMER.....	313
12.1	Introduction.....	313
12.2	Theoretical aspects.....	314
12.2.1	Diffusional process.....	314
12.2.2	Polymer erosion is the driving force.....	317
12.3	Experiments.....	318
12.4	Results.....	320
12.4.1	Results with the diffusion process.....	320
12.4.2	Results with the erosion process.....	322
12.5	Conclusions.....	327
13	DOSAGE FORMS MADE OF A CORE AND SHELL, WITH AN ERODIBLE SHELL. CONSTANT RATE OF DELIVERY.....	329
13.1	Introduction.....	329
13.2	Theoretical aspects.....	330
13.3	Experimental.....	333

13.4	Results.....	334
13.4.1	Results with sodium salicylate.....	334
13.4.2	Results with sulfanilamide.....	338
13.5	Conclusions.....	341
14	DOSAGE FORMS MADE OF CORE AND SHELL, WITH A NON-ERODIBLE POLYMER.....	345
14.1	Introduction.....	345
14.2	Theoretical.....	346
14.3	Experimental.....	352
14.4	Results.....	352
14.4.1	Data.....	353
14.4.2	Validity of the model.....	354
14.4.3	Effect of parameters.....	354
14.4.4	Profiles of concentration.....	357
14.5	Conclusions.....	358
15	CONTROLLED RATE OF DELIVERY WHEN THE SOLUBILITY OF THE DRUG IS LOW, BY USING A SWELLING POLYMER.....	363
15.1	Introduction.....	363
15.2	Dosage form with a polymer matrix and a swelling polymer.....	364
15.2.1	Theoretical.....	364
15.2.2	Experimental.....	365
15.2.3	Results.....	366
15.3	Dosage forms with gelucire and a swelling polymer.....	373
15.3.1	Theoretical.....	373
15.3.2	Experimental.....	373
15.3.3	Results and discussion.....	376
15.4	Dosage form with a core (swelling Polymer-Drug-Eudragit) and an erodible polymer.....	380
15.4.1	Theoretical.....	380
15.4.2	Experimental.....	382
15.4.3	Results.....	383
15.5	Conclusions.....	390
16	DOSAGE FORMS WITH A DRUG ATTACHED TO A POLYMER DISPERSED IN A NON-ERODIBLE POLYMER MATRIX.....	393
16.1	Introduction.....	393
16.2	Theoretical.....	394
16.3	Experimental.....	395
16.4	Results.....	397
16.5	Conclusions.....	404
INDEX.....		409
