CHAPTER 1 INTRODUCTION, COMMENTARY AND OVERVIEW

1

1.1	Biosynthesis and the Shikimate Pathway	1
1.2	Evolution and the Shikimate Pathway	5
1.2.1	The metabolic costs of aromatic α -amino acid synthesis	5
1.2.2	Multifunctional enzymes—the <i>arom</i> complex	6
1.3	Developments in Methodology	9
1.3.1	Genetic engineering	10
1.3.2	Organic chemical synthesis	13

CHAPTER 2 CHEMISTRY OF INTERMEDIATES IN THE COMMON PATHWAY

17

2.1	D-Erythrose-4-phosphate	17
2.2	Phosphoenolpyruvate (PEP)	20
2.3	3-Deoxy-D- <i>arabino</i> -heptulosonic Acid 7-Phosphate (DAHP)	26
2.4	3-Dehydroquinic Acid	35
2.5	3-Dehydroshikimic Acid	38
2.6	Shikimic Acid	39
2.6.1	Discovery, isolation and properties	39
2.6.2	Synthesis	50
2.7	Shikimic Acid 3-Phosphate	64
2.8	5-Enolpyruvylshikimic Acid 3-Phosphate (5-EPS-3-P)	67
2.9	Chorismic Acid	75
2.9.1	Isolation, structure and properties	75
2.9.2	Synthesis	79
2.9.3	<i>In vitro</i> conversion to prephenic acid	83
2.10	Quinic Acid	90

CHAPTER 3 ENZYMES AND ENZYMOLOGY OF THE COMMON PATHWAY	103
---	------------

3.1 Introduction	103
3.2 3-Deoxy-D- <i>arabino</i> -heptulosonate 7-Phosphate (DAHP) Synthase	106
3.2.1 Mechanism of action of DAHP synthase	110
3.3 3-Dehydroquinate Synthase	116
3.4 3-Dehydroquinate Dehydratase (3-Dehydroquinase)	123
3.5 Shikimate Dehydrogenase (Shikimate Oxidoreductase)	124
3.6 Shikimate Kinase	126
3.7 5-Enolpyruvylshikimate-3-phosphate (5-EPS-3-P) Synthase	127
3.7.1 Enzymology	127
3.7.2 Glyphosate and the inhibition of 5-enolpyruvylshikimate-3-phosphate synthase	136
3.8 Chorismate Synthase	139
3.9 Inducible Catabolism of Quinic and Shikimic Acids	144

CHAPTER 4 BEYOND CHORISMATE—PRIMARY ESSENTIAL METABOLITES	156
--	------------

4.1 Introduction	157
4.2 Pathways to L-Phenylalanine and L-Tyrosine	160
4.2.1 Pathway diversity and ambiguity	160
4.2.2 Prephenic acid	162
4.2.3 L-Arogenate	164
4.2.4 Monofunctional chorismate mutases	166
4.2.5 Bifunctional chorismate mutases	168
4.2.6 Monofunctional prephenate dehydratase and prephenate dehydrogenase	172
4.2.7 Aminotransferases	173
4.2.8 L-Arogenate ('pretyrosine') metabolism	173
4.2.9 Chorismate mutase—mechanism of action	175
4.3 Pathway to L-Tryptophan	184
4.3.1 Organisation of enzymes—comparative aspects	184
4.3.2 Anthranilate synthase	191
4.3.3 Anthranilate phosphoribosyl transferase, phosphoribosyl-anthranilate isomerase and indole-3-glycerol phosphate synthase	195
4.3.4 Tryptophan synthase	198
4.4 Regulation of Aromatic Amino Acid Synthesis	204
4.5 <i>p</i> -Aminobenzoate Synthesis and the Folate Coenzymes	206

4.6	Benzo- and Naphtho-isoprenoid Quinone Biosynthesis	210
4.6.1	Introduction—structure and function	210
4.6.2	Biosynthetic pathways	213
4.7	Salicylic Acid, 2,3-Dihydroxybenzoic Acid and Enterobactin	223
4.7.1	Siderophores, salicylic acid and mycobactins	223
4.7.2	Enterobactin (enterochelin) and 2,3-dihydroxybenzoate	224
4.8	Aromatic Amino Acid Metabolism	227
4.8.1	Lignin—L-phenylalanine ammonia lyase (PAL) and the hydroxycinnamate pool	227
4.8.2	Mammalian metabolism of aromatic amino acids	238

CHAPTER 5 BEYOND CHORISMATE—SECONDARY METABOLISM

255

5.1	Introduction—Secondary Metabolism	255
5.2	Microbial Metabolites	262
5.2.1	Antibacterial agents	263
5.2.2	Mycotoxins	276
5.2.3	Miscellaneous antibiotics and metabolites	289
5.2.4	Tryptophanase and tyrosine phenol lyase	304
5.3	Plant Secondary Metabolites	307
5.3.1	Plant alkaloids—early biosynthetic ideas	312
5.3.2	Biosynthesis of the benzyloquinoline alkaloids	315
5.3.3	Enzymology of benzyloquinoline alkaloid synthesis	319
5.3.4	Enzymology of monoterpene indole alkaloid biosynthesis	327
5.3.5	Miscellaneous nitrogen-containing metabolites	328
5.3.6	Phenylpropanoid and flavonoid biosynthesis	331

Addendum	365
