Table of Contents

1. Introduction
 - 1.1. Studies of Incompressible MHD Fluctuations
 - 1.2. Studies of Compressible MHD Fluctuations
 - 1.3. Plan of the Present Review
2. Data Analysis and Basic Observational Results
 - 2.1. Basic Assumptions on Data Sets
 - 2.2. Physical Parameters Used in Data Analysis
 - 2.3. Data Selection and Its Relation with the Scientific Conclusions
 - 2.4. Basic Phenomenological Results
3. Nature and Origin of Incompressible MHD Fluctuations
 - 3.1. Alfvén Waves
 - 3.2. Incompressible Convective Structures or 2-D Turbulence
 - 3.3. Nonlinear Interactions and Turbulence Evolution
 - 3.4. Influence of the Compressible Fluctuations
4. Spectral Transfer and Spatial Transport Theory of Incompressible MHD Fluctuations in Inhomogeneous Flow
 - 4.1. Fluctuation Equations

- 4.2. Convection Theory for Static or Quasi-Static Structures
- 4.3. WKB Theory for Small-Scale Alfvén Waves
- 4.4. Full Wave Theory for Large-Scale Alfvén Waves
- 4.5. WKB-like Turbulence Theory for Alfvénic Fluctuations
- 4.6. Model for ‘Strong’ Isotropic or 2-D Turbulence
- 4.7. Two-Component Model with Superposition of Alfvén Waves and Convective Magnetic Structures
- 4.8. Full Spectrum Transfer Equations for Inhomogeneous MHD Turbulence
5. Nature and Origin of Compressible MHD Fluctuations
 - 5.1. Theoretical Description of the Compressible MHD Fluctuations
 - 5.2. Compressive Structures and Pressure-Balanced Structures
 - 5.3. Magnetosonic Waves and their Superposition on Pressure-Balanced Structures
 - 5.4. Pseudosound and Nearly Incompressible MHD Fluctuations
6. Numerical Simulations and Flow Instabilities
 - 6.1. Advantages and Limitations of MHD Simulations for the Study of Solar Wind Turbulence
 - 6.2. Anisotropy Development Due to a Magnetic Field
 - 6.3. Formation of Magnetic Structures in Relation with a Uniform Magnetic Background Field
 - 6.4. Velocity-Shear Generation of Solar Wind Turbulence
 - 6.5. Decay of Large-Amplitude Alfvén Waves
7. The Random Distributions of Parameters of Solar Wind Fluctuations
 - 7.1. Distribution of the Magnitude of Magnetic Components
 - 7.2. Distribution of the Angle of the Magnetic Vector
 - 7.3. Distribution of the Normalized Magnetic Helicity
 - 7.4. Distribution of the Correlation Length
8. Intermittency of the Solar Wind Fluctuations
 - 8.1. Theoretical Considerations
 - 8.2. Observations
9. The Heating and Acceleration Effects on the Solar Wind
 - 9.1. The Heating of the Solar Wind by Cascade Energy
 - 9.2. The Acceleration Effects on the Solar Wind
 - 9.3. The Preferential Heating and Acceleration Effects on Solar Wind Heavy Ions
 - 9.4. A Possible Common Energy Source of High-Speed Winds and Alfvén Waves
10. Summary and Prospect
