

**GROUP THEORETICAL
FOUNDATIONS**
of

**QUANTUM
MECHANICS**

R. Mirman

NOVA SCIENCE PUBLISHERS, INC.

Table of Contents

Preface	v
1 Foundations	1
1.1 GEOMETRY, PHYSICS, NECESSITY	1
1.2 NATURE IS QUANTUM MECHANICAL: WHY?	2
1.3 THE FOUNDATIONS OF THE TERMINOLOGY	3
1.3.1 Frameworks and descriptions	3
1.3.2 How objects must be described — and what this implies .	4
1.3.3 Theories fundamental and theories phenomenological . .	5
1.4 WHAT IS A POSSIBLE FRAMEWORK FOR PHYSICS?	7
1.4.1 The Poincaré group and products of its representations .	9
1.4.2 The arguments do not depend on invariance	10
1.4.3 Geometry, not symmetry, eliminates classical physics . .	11
1.4.4 Objects are given by functions, and this is quantum me- chanics	13
1.5 THE POVERTY OF A COMPLETELY CLASSICAL PHYSICS	14
1.5.1 Is a completely classical physics possible?	15
1.5.2 Classical physics in an enclosed tube	18
1.6 IS ELECTROSTATIC ENERGY INFINITE IN QUANTUM MECHANICS?	19
1.7 FUNDAMENTAL ASSUMPTIONS AND CONSEQUENCES	22
2 Why Geometry, so Physics, Require Complex Numbers	25
2.1 WHAT NUMBERS MUST GEOMETRY AND PHYSICS USE?	25
2.1.1 The preeminence of complex numbers in geometry and physics	25
2.1.2 How translations introduce complex numbers	26
2.1.3 Translations must be applied to functions, complex ones .	28
2.1.4 Rotations also give complex numbers	28
2.1.5 Lie groups require complex numbers	29
2.2 SPACE MUST BE REAL, STATEFUNCTIONS COMPLEX	32
2.2.1 The nature of Euclidean geometry	32
2.2.2 Statefunctions are complex	35

2.3	THE NATURE OF THE UNIVERSE AND THE NUMBERS	36
3	Properties of Statefunctions	38
3.1	IS IT A WAVE OR IS IT A PARTICLE?	38
3.1.1	How particle aspects seem to arise experimentally	38
3.1.2	Do cloud-chamber tracks imply particles?	40
3.1.3	Objects are not waves	41
3.1.4	The correct description is that of functions	42
3.2	HOW TO REDUCE A STATEFUNCTION	42
3.2.1	Wavefunction "collapse" in a cloud chamber	43
3.2.2	Does decay cause "collapse"?	46
3.2.3	The process of reduction is given by Schrödinger's equation	46
3.3	HOW STATEFUNCTIONS GIVE PROBABILITY	47
3.3.1	Why group properties require a statistical interpretation	47
3.3.2	Different ways of giving frequency are equivalent	48
3.3.3	Probability is given by the square of the statefunction	49
3.3.4	The probability depends on the absolute square	51
3.4	STATEFUNCTIONS AND EIGENVALUES	52
3.4.1	The uncertainty principle	52
3.4.2	Why observables are eigenvalues	53
3.4.3	State labels are conserved	55
3.4.4	Why statefunctions are eigenfunctions of group invariants	56
4	The Foundations of Coherent Superposition	58
4.1	LINEARITY, SUPERPOSITION AND GROUP REPRESENTATIONS	58
4.1.1	What does coherent superposition mean?	59
4.1.2	Superposition is required by compact groups	60
4.1.3	Why the arguments differ for noncompact groups	62
4.2	ARBITRARY SUPERPOSITIONS	63
4.2.1	Localization leads to coherent superposition	63
4.2.2	Experimental meaning of coherent superposition	64
4.2.3	Possible sums may not be experimentally so	66
4.3	WHAT GETS ADDED?	67
4.4	WHEN NEED LINEARITY HOLD, AND WHEN CAN IT BREAK DOWN?	69
4.4.1	What is the effect of nonlinearity?	69
4.4.2	How do Abelian groups differ?	71
4.4.3	How the type of group affects the type of labels	72
4.4.4	Linearity and the Poincaré group	73
4.5	GRAVITATION AND SUPERPOSITION	74
4.5.1	Gravitational basis states	74
4.5.2	Are coherent superposition and gravitation compatible?	76
4.5.3	The uncertainty principle and gravitation	77
4.5.4	Is gravitational phase meaningful?	78

4.5.5	Are colliding gravitational waves solutions?	78
4.6	LINEARITY AND INTERACTIONS	79
4.7	PROBABILITY AND LINEARITY	80
4.7.1	Probability and gravitation	81
4.7.2	Gravitation illustrates other problems from nonlinearity	82
4.7.3	Gravitation is a model for the effects of interactions	83
5	Geometry, Transformations, Groups and Observers	85
5.1	TRANSFORMATIONS ARE PHYSICS: PHYSICS IS TRANSFORMATIONS	85
5.1.1	What are these transformations?	86
5.1.2	The need for observers	87
5.1.3	What are observers?	88
5.1.4	What equations govern physical objects?	89
5.2	OBSERVATIONS MUST BE CONSISTENT — AND THIS IS SUFFICIENT	90
5.2.1	The stringency of consistency	91
5.2.2	Transformations are expressible as products	91
5.2.3	Behavior in identical situations must be history-independent	93
5.2.4	How electrons relate their observations	94
5.2.5	Mathematical restrictions on observers, observations and equations	96
5.2.6	Transformations restrict governing equations	99
5.3	GEOMETRY RESTRICTS PHYSICS	100
5.3.1	Why physical objects are described by basis vectors	101
5.3.2	Why geometrically is the Poincaré group required?	103
5.3.3	The necessity for Poincaré basis vectors	104
5.3.4	Transformations of observers interacting with objects	106
5.3.5	Algebra, geometry, basis states, statefunctions	107
6	The Poincaré Group and Its Implications	108
6.1	INHOMOGENEOUS GROUPS	108
6.2	THE POINCARÉ GROUP	110
6.2.1	Representations of the Poincaré group	110
6.2.2	Lorentz-subgroup representations	110
6.2.3	Products of Poincaré representations	113
6.3	THE MEANING AND IMPLICATIONS OF THE DIRAC EQUATION	114
6.3.1	The representations giving the Dirac equation	115
6.3.2	Why there is an equation of motion for $\text{spin-}\frac{1}{2}$, only	116
6.3.3	Schrödinger's equation, Newton's law, Hamiltonians, Lagrangians	118
6.4	DOES THE PROTON HAVE INTERNAL STRUCTURE?	119
