CONTENTS

PREFACE	ix
Part I FOUNDATIONS	1
1 SCOPE OF GLOBAL OPTIMIZATION	3
1.1 Models and Nature of the Problem	4
1.2 Mathematical Structure	10
1.3 Hierarchy of Global Optimization Problems	13
1.4 Transcending Stationarity as the Core of Global Optimization	15
1.5 Problems With Special Structures	18
2 QUASI-CONVEXITY	23
2.1 Quasi-Convex Functions	24
2.2 Quasi-conjugacy	30
2.3 Quasi-biconjugate	39
2.4 Quasi-subdifferential	43
3 D.C. FUNCTIONS AND D.C. SETS	47
3.1 Some Typical Examples	47
3.2 General Properties of D.C. Functions	50
3.3 How to Recognize D.C. Functions	52
3.4 Effective D.C. Representation	56
3.5 D.C. Sets	67
3.6 Global Optimality Criterion	72

4	DUALITY	77
4.1	Quasi-convex Minimization over a Convex Set	78
4.2	Maximization over a Convex Set and Minimization over the Complement of a Convex Set	85
4.3	D.C. Optimization	93
5	LOW-RANK NONCONVEX STRUCTURES	95
5.1	Nonconvexity Rank	96
5.2	Nonconvexity Index	100
5.3	Weakly Convex Functions	108
5.4	D.C. Representation by a Nucleus	113
6	GLOBAL SEARCH METHODS AND BASIC D.C. OPTIMIZATION ALGORITHMS	119
6.1	Outer Approximation	119
6.2	Successive Partition	130
6.3	Dualization	155
Part II	METHODS AND ALGORITHMS	167
7	PARAMETRIC APPROACHES IN GLOBAL OPTIMIZATION	169
7.1	Minimization of a Generalized Linear Multiplicative Function and a Sum of Two Linear Fractional Functions	170
7.2	Rank Two and Rank Three Bilinear Programming Problems	177
7.3	Average Performance of Parametric Algorithms	184
7.4	Minimization of Low-Rank Concave Functions	191
8	MULTIPLICATIVE PROGRAMMING PROBLEMS	203
8.1	Convex Multiplicative Programming Problems	204
8.2	Minimization of a Product of Several Convex Functions	213
8.3	Other Problems Related to Multiplicative Functions	220
9	MONOTONIC PROBLEMS	229
9.1	Quasiconcave Monotonic Functions	230
9.2	Basic Structural Properties	234
9.3	Linearly Constrained Problems	240

9.4	Solution Methods for Monotonic Problems	244
9.5	Decomposition by Polyhedral Annexation	247
9.6	Decomposition by Projection	252
9.7	Problems With Monotonic Constraints	258
9.8	Cases of Polynomial Solvability: Network Constraints	264
10	DECOMPOSITION METHODS BY PRICES	273
10.1	Generalized Dantzig-Wolfe's Decomposition Method	274
10.2	Generalized Benders' Partitioning Method	283
10.3	Alternative Variant	291
11	DYNAMIC PROGRAMMING ALGORITHMS IN GLOBAL OPTIMIZATION	297
11.1	Multi-Echelon Production and Inventory Problem	298
11.2	Lot-Sizing Problems with Generalized Concave Cost Functions	303
11.3	Discrete-Variable Multi-Stage Problems	310
Part III	SELECTED APPLICATIONS	323
12	LOW RANK NONCONVEX QUADRATIC PROGRAMMING	325
12.1	Concave Quadratic Programming Problems and Bilinear Programming Problems	326
12.2	Low Rank Concave Quadratic Programming Problems	331
12.3	Low Rank Bilinear Programming Problems	343
12.4	General Low Rank Nonconvex Quadratic Programming Problems	349
13	CONTINUOUS LOCATION	353
13.1	Unconstrained Location Problems	354
13.2	Solving Unconstrained Location Problems	362
13.3	Constrained Location Problems	367
13.4	Solving General Constrained Location Problems	371

14	DESIGN CENTERING AND RELATED GEOMETRIC PROBLEMS	375
14.1	Design Centering	375
14.2	Related Geometric Problems	389
15	MULTIOBJECTIVE AND BILEVEL PROGRAMMING	397
15.1	Optimization over the Efficient Set	398
15.2	Bilevel Linear Programming	408
15.3	Relationship between Monotonic, Multiobjective and Bilevel Programming	423
	REFERENCES	427
	INDEX	455
