

CRYSTAL PROPERTIES VIA GROUP THEORY

ARTHUR S. NOWICK

*Henry Marion Howe Professor Emeritus of Materials Science
Columbia University, New York*

CAMBRIDGE
UNIVERSITY PRESS

Contents

<i>Preface</i>	<i>page</i> xiii
1 Tensor properties of crystals: equilibrium properties	1
1-1 Definition of crystal properties	1
1-2 Physical quantities as tensors; tensor properties	3
1-3 The basic linear relations	4
1-4 Condensation of indices: the 'engineering' stresses and strains	8
1-5 Effect of changing the conditions of measurement	10
1-6 Higher-order effects	12
1-6-1 Permittivity and optical properties	12
1-6-2 Third-order elastic constants	15
1-7 Optical activity: the gyration tensor	16
1-8 Summary of equilibrium properties	17
Problems	19
2 Tensor properties of crystals: transport properties	20
2-1 General theory	20
2-2 Thermoelectric effects	22
2-3 Piezoresistance	24
2-4 Galvanomagnetic and thermomagnetic effects	24
2-5 Summary of transport properties	28
2-6 Properties that cannot be represented by tensors	28
Problems	30
3 Review of group theory	31
3-1 Crystal symmetry and the point groups	31
3-2 Representation theory	40

3-3	The character tables	44
3-4	Concept of symmetry coordinates	46
3-5	Concept of similarity of orientation	53
	Problems	61
4	Linear relations treated group theoretically	64
4-1	Introduction and Neumann's principle	64
4-2	Tensor quantities as hypervectors	65
4-3	The Symmetry-Coordinate Transformation (S-C-T) tables	67
4-4	The Fundamental Theorem	70
4-5	Applications of the Fundamental Theorem	71
4-6	Alternative treatments	76
	Problems	78
5	The magnetic point groups and time reversal	80
5-1	The magnetic point groups	81
5-2	Neumann's principle in space-time	83
5-3	Application to non-magnetic crystals	85
5-4	Application to magnetic crystals	85
5-5	Conclusions	89
	Problems	92
6	Matter tensors of rank 0, 1 and 2	93
6-1	Scalar quantities (rank 0)	93
6-2	Polar vector quantities (rank 1)	93
6-2-1	Form of the K tensor	93
6-2-2	Application to pyroelectric effect; ferroelectrics	94
6-3	Axial vector quantities	95
6-4	Second-rank tensor quantities	96
6-4-1	Forms of the K tensor for various crystal symmetries	96
6-4-2	Property <i>K</i> in an arbitrary direction	100
6-4-3	Further remarks on <i>T</i> (2) matter tensors	101
6-4-4	Application to diffusivity and electrical conductivity	102
6-4-5	Application to the optical indicatrix	104
6-4-6	Application to the Hall tensor	106
6-5	Second-rank axial tensors	107
6-5-1	Forms of the K tensor for various crystal symmetries	107
6-5-2	Application to optical activity: case of quartz	111
	Problems	111

7 Matter tensors of rank 3	113
7-1 Partly symmetric tensors of rank 3	113
7-1-1 Form of the K tensor for various crystal symmetries	114
7-1-2 Application to piezoelectricity: quartz and PZT	118
7-1-3 Application to the linear electro-optic effect	120
7-2 Non-symmetric tensors of rank 3	124
7-3 Axial tensors of rank 3	125
7-4 Polar tensors of rank 3 revisited	128
Problems	131
8 Special magnetic properties	132
8-1 <i>c</i> -tensors of rank 1: the magnetocaloric effect	133
8-2 <i>c</i> -tensors of rank 2: the magnetoelectric effect	135
8-3 <i>c</i> -tensors of rank 3: the piezomagnetic effect	137
8-4 Symmetric <i>c</i> -tensors of rank 3: higher-order magnetic permeability	141
Problems	144
9 Matter tensors of ranks 4 and 5	145
9-1 Relation between $T_s(2)$ and $T_s(2)$	145
9-2 Application to elastic constants	151
9-3 Some applications of non-symmetric $T(4)$ tensors	159
9-4 Relation between $T_s(2)$ and $T(2)$: magnetothermoelectric power	162
9-5 Relation between $T(1)$ and $T_s(3)$: the second-order Hall effect	166
9-6 Other possibilities involving triple products	169
Problems	171
10 Matter tensors of rank 6	173
10-1 Relation between $T_s(2)$ and $T_s(4)$	173
10-1-1 Case of the upper hexagonal groups	176
10-1-2 Case of the upper cubic and isotropic materials	181
10-2 Application to third-order elastic constants	184
10-3 Other cases of $T(6)$ tensors	187
Problems	190
Appendices	192
A Review of tensors	192
B Stress, strain and elasticity	199

C Finite deformation	203
D The great orthogonality theorem	204
E The Symmetry-Coordinate Transformation tables for the 32 point groups and two infinite groups	206
F Proof of the Fundamental Theorem	217
G Theorems concerning magnetic groups	219
 <i>References</i>	 222
 <i>Index</i>	 226
