Contents

	PAGE
1. Introduction	1
2. Quantum dots	7
2.1. One-electron systems	12
2.1.1. Energy spectrum	12
2.1.2. Single electron states	15
2.2. Dipole matrix elements	17
2.3. Basic properties: Experiments	18
2.3.1. Single-electron capacitance spectroscopy	21
2.3.2. Optical transitions	26
2.4. Transport Spectroscopy	34
2.4.1. Charging effects	35
2.4.2. The diamond diagrams	38
2.4.3. Magnetic field effects	38
2.4.4. Electron turnstiles	40
2.4.5. Photon-assisted tunneling	43
2.4.6. Vertical tunneling	44
2.5. Many-electron systems	51
2.5.1. Interaction matrix elements	53
2.5.2. Many-electron spectra	55
2.5.3. Electronic heat capacity	67
2.5.4. Magnetization	67
2.5.5. Spin transitions	69
2.5.6. Quantum-Hall dots	70
2.5.7. Coupled quantum dots	73
2.6. Electron-impurity systems	76
2.6.1. Energy spectrum	78
2.6.2. Optical absorption spectrum	80
2.7. Exciton spectrum	87
2.8. Tilted field effects	94
2.9. Spin blockade in quantum dots	95

	PAGE
2.10. Quantum dot molecules	96
2.11. Non-circular dots	100
2.11.1. Elliptical quantum dots	100
2.11.2. Other asymmetric potentials	105
2.11.3. Quantum dot stadium	107
3. Related topics	109
3.1. Quantum antidots	109
3.1.1. Commensurability oscillations	109
3.1.2. Electron correlation effects	119
3.2. Quantum corrals	122
3.3. Self-assembled quantum dots (SAQD)	126
4. Summary and outlook	129
