

RAPID MRI METHODS FOR FUNCTIONAL BRAIN
IMAGING AT ULTRAHIGH-FIELDS

Dissertation

zur Erlangung des Grades eines
Doktors der Naturwissenschaften

der Fakultät für Mathematik &
Naturwissenschaften
und
der Medizinischen Fakultät
der Eberhard-Karls-Universität Tübingen

vorgelegt
von

Tram Nguyen
aus Cam Ranh, Vietnam

Januar 2011

CONTENTS

Preface	v
Summary	vii
List of Figures	xi
1 Introduction	1
1.1 Motivational Background	2
1.2 Objectives	3
1.3 Outline	4
2 Ultra-High Field MRI	5
2.1 High-Field Aspects	5
2.1.1 The Equilibrium Signal	7
2.1.2 Signal-to-Noise Ratio	9
2.1.3 RF Properties	10
2.1.4 Main-Field Inhomogeneity	13
2.1.5 Relaxation Times	14
2.2 Functional Brain Imaging	16
2.2.1 BOLD contrast	16
2.2.2 BOLD Field-Dependence	18
2.3 Imaging Conditions for fMRI	18
2.3.1 Sequence Performances	19
3 Fast Sampling Methods	21
3.1 Signal Sampling	21
3.1.1 Scan Time Parameters	22
3.2 Fast k -Space Trajectories	23
3.2.1 Conventional Single-Shot Schemes	23

3.2.2	Advanced Single-Shot Schemes	24
3.3	Reduced Encoding	25
3.3.1	Partial Fourier Imaging	25
3.3.2	Segmented k -Space Imaging	26
3.4	Parallel Imaging	26
3.4.1	Acquisition: The Encoding Concept	26
3.4.2	Reconstruction: Unfolding Data	28
3.4.3	Signal-Noise and Field Relations	31
3.5	Other Reduced-FOV methods	32
4	Rapid fMRI Sequences	33
4.1	Basis of Practical Application	33
4.2	Cartesian: EPI Readout	34
4.2.1	Sequence Limitations	35
4.2.2	Correction Strategies	37
4.3	Non-cartesian: Spiral Imaging	38
4.3.1	Sequence Limitations	40
4.3.2	Correction Strategies	42
4.3.3	Experimental Features	43
4.4	Discussion	46
5	Improved Volumetric EPI	49
5.1	Multi-Slice EPI-fMRI	49
5.2	Volumetric Imaging	50
5.2.1	Echo-Volumar Imaging	51
5.2.2	Hybrid 3D-EPI	52
5.3	Two-dimensional Acceleration	53
5.3.1	Reconstructions in 2D-PI	53
5.4	Method Implementation	54
5.4.1	Reconstruction Scheme	55
5.5	Experimental Execution	58
5.5.1	Imaging Schemes and Protocols	58
5.5.2	Practical Measures	59
5.5.3	Image Results	61
5.6	Application to fMRI	63
5.6.1	Brain Activation Detection	64
5.6.2	Data Analysis and Statistics	66
5.7	Overall Sequence Performance	68

5.7.1	Intrinsic Signal-to-Noise Ratios	69
5.7.2	Noise Characteristics	74
5.7.3	Signal-Noise Profiles	77
5.8	Discussion	80
6	Novel Accelerated RASER	85
6.1	Spin-Echo EPI	85
6.2	Adiabatic Principles and Pulses	86
6.2.1	The Adiabatic Passage	86
6.2.2	Frequency-swept RF Pulses	88
6.3	The RASER Sequence	91
6.3.1	Time-encoding	92
6.3.2	Data Reconstruction and Correction	92
6.3.3	Sequence Limitations	93
6.4	Accelerated RASER	94
6.4.1	Multiband Frequency-swept Pulses	95
6.4.2	PI Reconstruction	98
6.5	Experimental Multiband Implementations	100
6.5.1	RF Pulse Simulations	102
6.5.2	Interleaved Multiband Implementation	104
6.6	Imaging Experiments	105
6.6.1	Schemes and Imaging Protocols	105
6.6.2	Data Acquisition and Reconstruction	107
6.6.3	I. Image Results: Blipped G_{te}	108
6.6.4	II. Image Results: Constant G_{te}	110
6.6.5	III. Image Results: Interleaved Scheme	112
6.7	Performance Evaluation	113
6.8	Discussion	115
7	Conclusions	117
7.1	Future Perspectives	119
A	PI Algorithms	121
A.1	SENSE Image Reconstruction	121
A.2	GRAPPA Data Reconstruction	124
B	SNR Estimations for PI	127

C Experimental Settings	131
C.1 Spiral Imaging Experiments	131
C.2 Accelerated 3D-EPI Experiments	132
C.3 Accelerated RASER Experiments	133
D Subject Results: EPI-PI	135
E Subject Results: RASER-PI	139
Publications	141
References	143
