

Functional Analysis

Proceedings of the First International Workshop
held at Trier University, Germany,
September 26–October 1, 1994

Editors

Susanne Dierolf
Seán Dineen
Paweł Domański

Walter de Gruyter · Berlin · New York 1996

Table of Contents

Preface	v
<i>A. G. Aksoy and G. Lewicki</i> Modular spaces and K -widths	1
<i>A. A. Albanese, G. Metafunne, and V. B. Moscatelli</i> Representations of the spaces $C^m(\mathbb{R}^N) \cap H^{k,p}(\mathbb{R}^N)$	11
<i>F. Bastin and P. Laubin</i> Singular spectrum and functional properties of kernels	21
<i>Ehrhard Behrends</i> The possibility of finding small blocks implies the existence of norm convergent subsequences	29
<i>Klaus D. Bierstedt</i> The ε -(tensor) product of a (DFS)-space with arbitrary Banach spaces	35
<i>José Bonet and M. S. Ramanujan</i> Two classes of operators between Fréchet spaces	53
<i>Rüdiger W. Braun</i> Surjectivity of partial differential operators on Gevrey classes	69
<i>P. A. Chalov and V. P. Zahariuta</i> Invariants and the quasiequivalence property for families of Hilbert spaces	81
<i>Juan Carlos Díaz</i> Primariness of some universal Fréchet spaces	95
<i>S. Dierolf and Khin Aye Aye</i> On projective limits of Moscatelli type	105
<i>Seán Dineen and Mikael Lindström</i> Spaces of homogeneous polynomials containing c_0 or l^∞	119

Lech Drewnowski

On nonlinear isometries between Banach spaces 129

Lech Drewnowski, Miguel Florencio, and Pedro J. Paúl

Some new classes of rings of sets with the Nikodym Property 143

Uwe Franken and Reinhold Meise

Continuous linear right inverses for homogeneous linear partial differential operators on bounded convex open sets and extension of zero-solutions 153

Leonhard Frerick

A splitting theorem for nuclear Fréchet spaces 163

Leonhard Frerick and Jochen Wengenroth

Weakly acyclic (LF)-spaces 169

Ryszard Grząślewicz and Jolanta K. Misiewicz

Isometric embeddings of subspaces of L_α -spaces and maximal representation for symmetric stable processes 179

Wolfgang Hackenbroch

Product integration for bounded operator measures 183

Peter Harmand and Dirk Werner

The grade of an M -ideal 211

Jerzy Kąkol

Strongly Lindelöf spaces, Baire-type property and sequential closure conditions for inductive limits of metrizable spaces 227

Klaus-Detlef Kürsten

Examples of products in distribution spaces and in partial algebras 241

Michael Langenbruch

Continuation of Gevrey regularity for solutions of partial differential operators 249

Wolfgang Lusky

Growth conditions for harmonic and holomorphic functions 281

<i>E. Mangino, L. Frerick, J. Wengenroth, and S. Dierolf</i>	
Strong regularity conditions for some classes of (LF)-spaces	293
<i>Raymond Mortini</i>	
Completely continuous multiplication operators in uniform algebras	305
<i>Julian Musielak</i>	
Nonlinear integral operators with generalized Lipschitz kernels	313
<i>Marek Nawrocki</i>	
Köthe sequence space representations of some weighted algebras of holomorphic functions	319
<i>Kaisa Nyberg</i>	
Commutativity in cryptography	331
<i>Norbert Ortner and Peter Wagner</i>	
A short proof of the Malgrange–Ehrenpreis theorem	343
<i>Alfredo Peris</i>	
The factorization problem for operators mapping Fréchet spaces into (DF)-spaces	353
<i>Markus Poppenberg</i>	
Tame subspaces of power series spaces	365
<i>W. M. Ruess</i>	
Existence of solutions to partial functional evolution equations with delay	377
<i>Georg Schlüchtermann</i>	
Factorization of operator-valued functions	389
<i>Jean Schmets and Manuel Valdivia</i>	
On the Borel theorem in real Banach spaces	399
<i>Volker Schmidt</i>	
Sequence space representations of $\mathcal{F}(\Gamma+)$ and $\mathcal{D}'(\Gamma+)$	413

Dietmar Vogt

Tame splitting pairs of type 0 and 1 421

Jürgen Voigt

The sector of holomorphy for symmetric submarkovian semigroups 449

Schedule of Lectures 455

List of Participants 461

List of Contributors 469
