Bottom-Up Self-Organization in Supramolecular Soft Matter

Principles and Prototypical Examples
of Recent Advances

Contents

1	Hierarchical Self-organization and Self-assembly: Metal Nanoparticles in Polymer Matrices.	1
	Tomohiko Yamaguchi, Nobuhiko Suematsu and Hitoshi Mahara	
1.1	Introduction	1
1.2	Self-organization in Chemistry	2
1.2.1	Self-assembly and Dissipative Structure	2
1.2.2	Advantages of Each Self-organization	2
1.2.3	Self-organization of Hierarchy by Mutual Assistance Between Self-assembly and Dissipative Structure	3
1.3	Self-organization of Hierarchic Structure	5
1.3.1	Metal Nanoparticle as Conducting Material	5
1.3.2	Dissipative Structure-Assisted Self-assembly of Metal Nanoparticles	6
1.4	Conclusions	9
	References.	9
2	Aggregate Structure and Dynamic Percolation in Microemulsions.	11
	Martin Kraska, Björn Kuttich and Bernd Stühn	
2.1	Introduction	11
2.2	Nanoscopic Structure of Microemulsions	12
2.2.1	Stability and Phase Diagrams	12
2.2.2	Droplet Phase: Tuning of Droplet Size and Concentration	16
2.2.3	Temperature Stability of the Droplet Phase	23
2.2.4	Critical Behaviour—Aggregation in the Droplet Phase	27

2.3	Conductivity in Microemulsions: Aggregation and Dynamic Percolation	31
2.3.1	Introduction: Static and Dynamic Percolation	31
2.3.2	Dielectric Properties of Microemulsions	34
2.4	Tuning of Droplet-Droplet Interaction	46
2.4.1	Shifting the Percolation Threshold by Changing the Continuous Phase	46
2.4.2	Polymeric Additives I: Homopolymers Confined in Droplets	48
2.4.3	Polymeric Additives II: Droplet Bridging Versus Decoration	53
	References	61
3	Electric Field Effects in Chemical Patterns	65
	Patricia Dähmlow, Chaiya Luengviriya and Stefan C. Müller	
3.1	Introduction	65
3.2	Experimental	67
3.2.1	One- and Two-Dimensional Systems	67
3.2.2	Three-Dimensional Geometry	67
3.2.3	Microemulsions	69
3.3	Results	70
3.3.1	One-Dimensional Waves	70
3.3.2	Two-Dimensional Waves	72
3.3.3	Three-Dimensional Experiments	73
3.3.4	Microemulsions	77
3.4	Discussion	79
	References	81
4	Charge Transport in Chain of Nanoparticles	83
	L.V. Govor and J. Parisi	
4.1	Introduction	83
4.2	Positioning of Nanoparticle Chains in Between Nanogap Electrodes	85
4.3	Electrical Field Dependence of Charge Transport in Chain of Particles	88
4.4	Analysis of the Conductivity in Chain of Particles	93
4.5	Conclusion	98
	References	98
5	Influence of Nanoparticles on the Mechanism and Properties of Nanocomposites Obtained in Frontal Regime	101
	A.O. Tonoyan, S.P. Davtyan and S.C. Müller	
5.1	Introduction	101

5.2	Polymerization Acrylamide (AAM) Under Different Thermal Conditions	102
5.2.1	Polymer Nanocomposites with a Uniform Distribution of Nanoparticles in a Polymer Matrix Synthesized by Frontal Polymerization	102
5.2.2	The Influence of Thermal Conditions of Polymerization on the Structure of Polymer Nanocomposites with Polyacrylamide Binder	104
5.3	Frontal Polymerization of MMA in the Presence of SiO ₂ Particles	105
5.3.1	The Influence of the Filling Degree of SiO ₂ Particles on the Frontal Polymerization Mechanism	105
5.4	The Thermo-Physical Characteristics of Nanocomposite Samples Obtained Under Conditions of Frontal Polymerization	108
5.5	Influence of Single-Wall Nanotubes on the Stability of Frontal Modes and Properties of Polymer Nanocomposites	111
5.6	Influence of Amounts of SWCNT on the Characteristics of Frontal Copolymerization	112
5.7	Physico-Mechanical, Dynamic-Mechanical and Thermo-Chemical Properties of Nanocomposites	115
5.8	SiO ₂ Nanofiller Impact on Crystallization Kinetics During Adiabatic Anion Polymerization of ϵ -Caprolactam	118
5.8.1	Separation of Polymerization and Crystallization Processes	118
5.9	Conclusions	123
	References	124
6	Nonlinear Dynamics of Reactive Nanosystems: Theory and Experiments	127
	Y. De Decker, D. Bullara, C. Barroo and T. Visart de Bocarmé	
6.1	The Chemical Master Equation	129
6.1.1	The Chemical Fokker-Plank Equation	132
6.2	Field Emission and Field Ion Microscopy	135
6.3	Bistability in the H ₂ + O ₂ /Rh System	137
6.4	Oscillations During the NO ₂ + H ₂ Reaction on Platinum	143
6.5	Discussion and Conclusions	149
	References	149

7	Automated Polarized Microscopy Analysis of Fluorescent and Birefringent Nano- and Microfibers	151
	Frank Balzer and Manuela Schiek	
7.1	Introduction	151
7.2	Organic Micro- and Nanofiber Formation	153
7.3	Polarized Fluorescence	155
7.4	Birefringence and Bireflectance	166
7.5	Summary	171
	References.	172
8	Colloidal Copper Sulphide Based Nanocrystals as Building Blocks for Self-assembled Nanostructures	177
	Joanna Kolny-Olesiak and Jürgen Parisi
