## **Part I Emerging Research Leaders of Medical Informatics in KANSAI Area**

|                                                                                                                                |          |
|--------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>Prediction of Clinical Practices by Clinical Data<br/>of the Previous Day Using Linear Support Vector Machine . . . . .</b> | <b>3</b> |
| Takashi Nakai, Tadamasa Takemura, Risa Sakurai, Kenichiro Fujita,<br>Kazuya Okamoto and Tomohiro Kuroda                        |          |

|                                                                                                                                  |           |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Method for Detecting Drug-Induced Interstitial Pneumonia<br/>from Accumulated Medical Record Data at a Hospital . . . . .</b> | <b>15</b> |
| Yoshie Shimai, Toshihiro Takeda, Shirou Manabe, Kei Teramoto,<br>Naoki Mihara and Yasushi Matsumura                              |           |

|                                                                                                                       |           |
|-----------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Visualization and Quantitative Analysis of Nursing Staff<br/>Trajectories Based on a Location System . . . . .</b> | <b>25</b> |
| Kikue Sato, Tomohiro Kuroda and Akitoshi Seiyama                                                                      |           |

|                                                                                                                                                                           |           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>A Web-Based Stroke Education Application for Older<br/>Elementary Schoolchildren Focusing on the FAST Message. . . . .</b>                                             | <b>37</b> |
| Shoko Tani, Hiroshi Narazaki, Yuta Ueda, Yuji Nakamura,<br>Tenyu Hino, Satoshi Ohyama, Shinya Tomari, Chiaki Yokota,<br>Naoki Ohboshi, Kazuo Minematsu and Kazuo Nakazawa |           |

## **Part II Biomedical Engineering, Trends, Research and Technologies**

|                                                                                                                  |           |
|------------------------------------------------------------------------------------------------------------------|-----------|
| <b>A Review of Mobile Apps for Improving Quality of Life<br/>of Asthmatic and People with Allergies. . . . .</b> | <b>51</b> |
| Miguel A. Mateo Pla, Lenin G. Lemus-Zúñiga, José-Miguel Montañana,<br>Julio Pons and Arnulfo Alanis Garza        |           |

|                                                                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Physical Implementation of a Customisable System to Assist a User with Mobility Problems</b> . . . . .                                                                      | 65  |
| Sandra López, Rosario Baltazar, Miguel Ángel Casillas,<br>Víctor Zamudio, Juan Francisco Mosiño, Arnulfo Alanís<br>and Guillermo Méndez                                        |     |
| <b>Mobile Applications in Health, Competitive Advantage in the State of Baja California Mexico</b> . . . . .                                                                   | 75  |
| Nora del Carmen Osuna Millán, Margarita Ramírez Ramírez,<br>María del Consuelo Salgado Soto, Bogart Yali Márquez Lobato<br>and Arnulfo Alanís Garza                            |     |
| <b>Mental Activation of Seniors Incorporating ICT in Their Daily Lives</b> . . . . .                                                                                           | 85  |
| Maricela Sevilla Caro, María del Consuelo Salgado Soto,<br>Margarita Ramírez Ramírez, Esperanza Manrique Rojas,<br>Hilda Beatriz Ramírez Moreno and Lenin G. Lemus Zúñiga      |     |
| <b>Quality of Life and Active Aging Through Educational Gerontology in Information Technology and Communication</b> . . . . .                                                  | 93  |
| Esperanza Manrique Rojas, Hilda Beatriz Ramírez Moreno,<br>Margarita Ramírez Ramírez, Nora del Carmen Osuna Millán,<br>Arnulfo Alanís Garza and José Sergio Magdaleno Palencia |     |
| <b>Simulation of Cervical Cord Compression Using Finite Element Method (FEM)</b> . . . . .                                                                                     | 103 |
| Nur Fadhlina Binti Shaari, Junji Ohgi, Norihiro Nishida,<br>Xian Chen, Itsuo Sakuramoto and Toshihiko Taguchi                                                                  |     |
| <br><b>Part III Management for Healthcare</b>                                                                                                                                  |     |
| <b>A Study of Older People's Socializing Form with Others: Comparative Analysis of "Living Alone" and "Living with a Spouse" Using Quantification Theory Type II</b> . . . . . | 115 |
| Takayuki Kawaura and Yasuyuki Sugatani                                                                                                                                         |     |
| <b>Analysis of Japanese Health using Fuzzy Principal Component Analysis</b> . . . . .                                                                                          | 127 |
| Yoshiyuki Yabuuchi and Takayuki Kawaura                                                                                                                                        |     |
| <b>Analysis of Time-Series Data Using the Rough Set</b> . . . . .                                                                                                              | 139 |
| Yoshiyuki Matsumoto and Junzo Watada                                                                                                                                           |     |

|                                                                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Study on Multi-Period Transportation Problem Considering Opportunity Loss and Inventory</b> . . . . .                                                      | 149 |
| Shinichiro Ataka and Hisayoshi Horioka                                                                                                                        |     |
| <b>Diagnosis of ECG Data for Detecting Cardiac Disorder Using DP-Matching and Artificial Neural Network</b> . . . . .                                         | 161 |
| Mohamad Sabri bin Sinal and Eiji Kamioka                                                                                                                      |     |
| <b>Smart Technology for a Smarter Patient: Sketching the Patient 2.0 Profile</b> . . . . .                                                                    | 173 |
| Luca Buccoliero, Elena Bellio, Maria Mazzola and Elisa Solinas                                                                                                |     |
| <b>Construction and Evaluation of Bayesian Networks Related to the Specific Health Checkup and Guidance on Metabolic Syndrome</b> . . . . .                   | 183 |
| Yoshiaki Miyauchi and Haruhiko Nishimura                                                                                                                      |     |
| <b>Medical Care Delivery at the XXVII World Summer Universiade Kazan 2013</b> . . . . .                                                                       | 195 |
| Timur Mishakin, Elena Razumovskaya, Michael Popov and Olga Berdnikova                                                                                         |     |
| <br><b>Part IV Advanced ICT for medical and Healthcare</b>                                                                                                    |     |
| <b>Coccurrence Statistics of Local Ternary Patterns for HEp-2 Cell Classification</b> . . . . .                                                               | 205 |
| Xian-Hua Han, Yen-Wei Chen and Gang Xu                                                                                                                        |     |
| <b>Combined Density, Texture and Shape Features of Multi-phase Contrast-Enhanced CT Images for CBIR of Focal Liver Lesions: A Preliminary Study</b> . . . . . | 215 |
| Yingying Xu, Lanfen Lin, Hongjie Hu, Huajun Yu, Chongwu Jin, Jian Wang, Xianhua Han and Yen-Wei Chen                                                          |     |
| <b>Supporting Nurses' Work and Improving Medical Safety Using a Sensor Network System in Hospitals</b> . . . . .                                              | 225 |
| Misa Esashi, Haruo Noma and Tomohiro Kuroda                                                                                                                   |     |
| <b>Eye-Hand Coordination Analysis According to Surgical Process in Laparoscopic Surgery Training</b> . . . . .                                                | 237 |
| Takafumi Marutani, Hiromi T. Tanaka, Nobutaka Shimada, Masaru Komori, Yoshimasa Kurumi and Shigehiro Morikawa                                                 |     |

|                                                                                                                                                                    |            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>An Improvement of Surgical Phase Detection Using Latent Dirichlet Allocation and Hidden Markov Model . . . . .</b>                                              | <b>249</b> |
| Dinh Tuan Tran, Ryuhei Sakurai and Joo-Ho Lee                                                                                                                      |            |
| <b>Implementing a Human-Behavior-Process Archive and Search Database System Using Simulated Surgery Processes . . . . .</b>                                        | <b>263</b> |
| Zhang Zuo, Kenta Oku and Kyoji Kawagoe                                                                                                                             |            |
| <b>Unobtrusive Sensing of Human Vital Functions by a Sensory Unit in the Refrigerator Door Handle. . . . .</b>                                                     | <b>275</b> |
| D. Zazula, S. Srkoč and B. Cigale                                                                                                                                  |            |
| <b>Measurement of 3-D Workspace of Thumb Tip with RGB-D Sensor for Quantitative Rehabilitation . . . . .</b>                                                       | <b>287</b> |
| Tadashi Matsuo and Nobutaka Shimada                                                                                                                                |            |
| <b>Automatic Segmentation Method for Kidney Using Dual Direction Adaptive Diffusion Flow . . . . .</b>                                                             | <b>299</b> |
| Xu Qiao, Wujing Lu, Xuantao Su and Yen-Wei Chen                                                                                                                    |            |
| <b>Automatic Registration of Deformable Organs in Medical Volume Data by Exhaustive Search . . . . .</b>                                                           | <b>309</b> |
| Masahiro Isobe, Shota Niga, Kei Ito, Xian-Hua Han, Yen-Wei Chen and Gang Xu                                                                                        |            |
| <br><b>Part V Simulation and Visualisation/VR for Medicine</b>                                                                                                     |            |
| <b>GPU Acceleration of Monte Carlo Simulation at the Cellular and DNA Levels . . . . .</b>                                                                         | <b>323</b> |
| Shogo Okada, Koichi Murakami, Katsuya Amako, Takashi Sasaki, Sébastien Incerti, Mathieu Karamitros, Nick Henderson, Margot Gerritsen, Makoto Asai and Andrea Dotti |            |
| <b>A Study on Corotated Nonlinear Deformation Model for Simulating Soft Tissue Under Large Deformation . . . . .</b>                                               | <b>333</b> |
| Kazuyoshi Tagawa, Takahiro Yamada and Hiromi T. Tanaka                                                                                                             |            |
| <b>Remote Transparent Visualization of Surface-Volume Fused Data to Support Network-Based Laparoscopic Surgery Simulation. . . . .</b>                             | <b>345</b> |
| Rui Xu, Asuka Sugiyama, Kyoko Hasegawa, Kazuyoshi Tagawa, Satoshi Tanaka and Hiromi T. Tanaka                                                                      |            |

**Study of Surgical Simulation of Flatfoot Using a Finite Element Model . . . . .** 353  
Zhongkui Wang, Kan Imai, Masamitsu Kido, Kazuya Ikoma  
and Shinichi Hirai

**A Study of Meditation Effectiveness for Virtual Reality Based Stress Therapy Using EEG Measurement and Questionnaire Approaches. . . . .** 365  
Gamini Perhakaran, Azmi Mohd Yusof, Mohd Ezanee Rusli,  
Mohd Zaliman Mohd Yusoff, Imran Mahalil  
and Ahmad Redza Razieff Zainuddin

**Part VI Statistical Signal Processing and Artificial Intelligence**

**Late Onset Bipolar Disorder Versus Alzheimer Disease. . . . .** 377  
Darya Chyzyk, Marina Graña-Lecuona and Manuel Graña

**Short-term Prediction of MCI to AD Conversion Based on Longitudinal MRI Analysis and Neuropsychological Tests . . . . .** 385  
Juan Eloy Arco, Javier Ramírez, Juan Manuel Górriz, Carlos G. Puntonet  
and María Ruz

**Ensemble Tree Learning Techniques for Magnetic Resonance Image Analysis . . . . .** 395  
Javier Ramírez, Juan M. Górriz, Andrés Ortiz, Pablo Padilla  
and Francisco J. Martínez-Murcia for the Alzheimer Disease  
Neuroimaging Initiative

**Part VII Smart Medical and Healthcare System 2015 Workshop**

**Integrating Electronic Health Records in Clinical Decision Support Systems . . . . .** 407  
Eider Sanchez, Carlos Toro and Manuel Graña

**An Ad-Hoc Image Segmentation of Subcutaneous and Visceral Adipose Tissue from Abdomino-Pelvic Magnetic Resonance Images . . . . .** 417  
Oier Echaniz, Borja Ayerdi, Alexandre Savio and Manuel Graña

**Automated Segmentation of Subcutaneous and Visceral Adipose Tissues from MRI . . . . .** 427  
Borja Ayerdi, Oier Echaniz, Alexandre Savio and Manuel Graña
