|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| J. S. Howland, Spectral Concentration for Dense Point Spectrum .....                                                                                  | 1   |
| E. N. Dancer and P. Hess, Behaviour of a Semilinear Periodic-Parabolic Problem<br>when a Parameter is Small .....                                     | 12  |
| K. Yajima, On Smoothing Property of Schrödinger Propagators .....                                                                                     | 20  |
| G. F. Bachelis and F. J. Massey III, A Coin Tossing Problem of R. L. Rivest .....                                                                     | 36  |
| T. Kato, Liapunov Functions and Monotonicity in the Navier-Stokes Equation ....                                                                       | 53  |
| H. Matano, Singular Solutions of a Nonlinear Elliptic Equation and an Infinite<br>Dimensional Dynamical System .....                                  | 64  |
| T. Suzuki, Introduction to Geometric Potential Theory .....                                                                                           | 88  |
| R. J. Iório, Jr., KdV, BO and Friends in Weighted Sobolev Spaces .....                                                                                | 104 |
| A. McIntosh, The Square Root Problem for Elliptic Operators, a Survey .....                                                                           | 122 |
| C. E. Kenig, G. Ponce, and L. Vega, The Initial Value Problem for a Class<br>of Nonlinear Dispersive Equations .....                                  | 141 |
| A. Iwatsuka, On Schrödinger Operators with Magnetic Fields .....                                                                                      | 157 |
| H. Tamura, Existence of Bound States for Double Well Potentials and the Efimov<br>Effect .....                                                        | 173 |
| A. Jensen, High Energy Asymptotics for the Total Scattering Phase in Potential<br>Scattering Theory .....                                             | 187 |
| T. Ichinose, Feynman Path Integral to Relativistic Quantum Mechanics .....                                                                            | 196 |
| M. Ikawa, On the Distribution of Poles of the Scattering Matrix for Several<br>Convex Bodies .....                                                    | 210 |
| T. Ozawa, Smoothing Effect for the Schrödinger Evolution Equations with<br>Electric Fields .....                                                      | 226 |
| T. Ogawa and Y. Tsutsumi, Blow-up of Solutions for the Nonlinear Schrödinger<br>Equation with Quartic Potential and Periodic Boundary Condition ..... | 236 |
| List of Recent Publications of Tosio Kato .....                                                                                                       | 252 |

Papers are arranged according to the order of talks.
