

INDICE

A. DUPASQUIER and A. P. MILLS jr. – Foreword.....	pag.	xv
---	------	----

Gruppo fotografico dei partecipanti al Corso		fuori testo
--	--	-------------

I. INTRODUCTION

P. M. PLATZMAN – Strong and weak probes of condensed-matter systems.

1. What do we want to know about condensed-matter systems.....	pag.	4
1'1. Ground-state properties.....	»	4
1'1.1. Noninteracting electrons	»	4
1'1.2. Correlated electrons	»	5
1'2. Excited states of condensed-matter systems.....	»	6
1'2.1. Phonons	»	7
1'2.2. Electronic excitations.....	»	7
2. Physics of probes.....	»	10
3. X-ray scattering	»	11
3'1. Neutron scattering	»	20
4. Conclusion	»	20

II. ELECTRONIC STRUCTURE

P. E. MIJNARENDs and A. BANSIL – Theory of electron and positron momentum distributions in solids.

1. Introduction.....	»	25
2. Basic considerations.....	»	26
2'1. Positron implantation and thermalization.....	»	26
2'2. The annihilation process	»	27
2'3. High-momentum components	»	30
2'4. Plane-wave model.....	»	32
2'5. Selection rule.....	»	33
2'6. Hybridization.....	»	34
2'7. Many-body effects.....	»	37

3. Band theory of momentum density	pag.	40
3'1. Introduction.....	»	40
3'2. Momentum density in the KKR formalism	»	41
3'3. Examples of momentum density calculations	»	45
3'3.1. Positron density	»	45
3'3.2. Electron-positron momentum density	»	47
4. Fermiology of high- T_c superconductors: $\text{YBa}_2\text{Cu}_3\text{O}_7$	»	54
5. Momentum densities in disordered alloys	»	59
5'1. Modern band theory of disordered alloys: Some basic concepts	»	59
5'2. Electron momentum density in alloys	»	65
5'3. Electron-positron momentum density	»	67
5'4. Illustrative examples: CuGe and CuPd solid solutions	»	69

R. N. WEST – Positron studies of the electronic structure of solids.

1. Introduction.....	»	75
2. The basic measurement problem.....	»	76
2'1. The problem	»	76
2'2. Solutions	»	79
3. Momentum densities	»	81
3'1. The photon pair momentum density	»	81
3'2. The electron momentum density	»	84
3'3. Positron effects.....	»	88
3'3.1. The positron wave function	»	88
3'3.2. Many-electron effects	»	89
3'3.3. Temperature effects.....	»	93
4. 2D ACAR machines.....	»	94
4'1. Generic design considerations	»	94
4'1.1. Geometry	»	94
4'1.2. Symmetry	»	95
4'1.3. Scale.....	»	98
4'1.4. Detectors	»	100
4'1.5. Data collection and processing	»	102
5. Data analysis	»	103
5'1. Preliminary processing, visualization and analysis.....	»	103
5'2. LCW analyses	»	106
5'3. 3D reconstruction (tomography)	»	110
5'4. Further sophistications	»	117
6. Contemporary problems and likely future developments	»	122
6'1. Compounds.....	»	122
6'2. ACAR and positron beams	»	133

B. L. GYORFFY, J. MAJSNEROWSKI, M. B. SUVASINI, Z. SZOTECK and W. TEMMERMAN – Positron annihilation in the superconducting state.

1. Introduction.....	»	145
2. The local-density approximation (LDA) for normal electrons	»	147
3. A semi-phenomenological LDA theory for superconductors	»	148

4. The LDA for the 2γ annihilation rate $R_{2\gamma}(\mathbf{p})$ in the normal state	pag. 151
5. The LDA for the 2γ annihilation rate $R_2(\mathbf{p})$ in the superconducting state	» 152
A. A. MANUEL – 2D-ACAR studies and positron beam developments in Switzerland.	
1. Introduction.....	» 155
2. Principles of 2D-ACAR and experimental background.....	» 156
3. Analysis of 2D-ACAR and positron lifetime data	» 157
3'1. Window least-square method applied to statistical noise smoothing of 2D-ACAR data	» 157
3'2. Analysis of positron lifetime spectra using quantified maximum entropy	» 158
3'3. Linear approach to solve the inverse problem.....	» 160
3'4. A generalized linear filter	» 162
4. High-temperature superconductors.....	» 164
4'1. Crystal growth, structure, shape and orientation of $\text{YBa}_2\text{Cu}_3\text{O}_{7-\delta}$ samples	» 164
4'2. Calculation of band structure and positron states	» 165
4'3. Analysis of 2D-ACAR distributions.....	» 166
5. Arsenic vacancies in GaAs.....	» 172
6. An intense micro-beam of monoenergetic positrons.....	» 175
D. R. HARSHMAN – High- T_c superconductivity: applications of μ^+ SR and slow- μ^+ beams.	
Introduction.....	» 179
1. Brief review of slow-muon production.....	» 179
2. Experimental requirements	» 183
3. Applications of slow muons	» 185
3'1. μ^+ SR and superconductivity	» 187
3'2. The nature of high- T_c superconductivity.....	» 197
3'3. Utility of a slow-muon beam	» 203
4. Future directions.....	» 203

III. SURFACE STUDIES

A. P. MILLS jr. – Positron and positronium emission spectroscopies.

1. Introduction.....	» 209
1'1. Spectroscopies	» 209
1'2. Interactions	» 214
1'3. Selection rules	» 216
1'4. Spontaneous-emission rates	» 217
1'5. Thermal-emission rates	» 222
2. Positron emission spectroscopy.....	» 224
2'1. Positron emission mechanisms	» 224
2'2. Work functions	» 229
2'3. Positron tunneling and energy loss spectroscopy.....	» 230
2'4. Intensity correlation microscopy.....	» 237

3. Positronium emission spectroscopy	pag. 237
3'1. Thermal desorption of the surface positron state as positronium	» 237
3'2. Positronium emission from positron states in the bulk solid.....	» 238
4. Exercises	» 248
A. WEISS – Positron-annihilation-induced Auger electron spectroscopy.	
1. Introduction.....	» 259
2. The PAES mechanism	» 260
3. PAES apparatus	» 263
4. Secondary-electron background elimination	» 264
5. Surface sensitivity.....	» 266
6. Theoretical calculations	» 267
7. PAES intensities	» 268
8. Measurement of the temperature dependence of PAES.....	» 270
9. Applications of PAES.....	» 272
9'1. Studies of metal overlayers.....	» 272
9'2. Pd films on Cu(100)	» 272
9'3. Rh on Ag.....	» 273
9'4. Au on Si.....	» 275
10. PAES studies of the positron surface state.....	» 275
11. Future PAES research	» 279
11'1. Background-free line shape measurements	» 279
11'2. Polarized positron-annihilation-induced Auger electron spectroscopy	» 279
11'3. PAES microprobe	» 280
A. RUBASZEK – Effect of electron-positron correlations on the annihilation characteristics for positrons trapped at the surface of simple metals.	
1. Introduction.....	» 285
2. Theory	» 286
2'1. EMD, ACAR spectra and positron lifetime in solids	» 286
2'2. Electron wave functions in the host material.....	» 289
2'3. Positron distribution and electron-positron enhancement effects	» 293
2'3.1. Various approaches to electron-positron enhancement effects.....	» 297
2'4. The ACAR spectra at the surface.....	» 302
3. Calculations and results	» 303
3'1. The model	» 303
3'2. Electron and positron work functions.....	» 304
3'3. Electron-positron correlation effects and positron distribution at the surface	» 306
3'4. Annihilation characteristics at the surface.....	» 309
4. Conclusions.....	» 312

C. B. DUKE – Low-energy positron and electron diffraction by solids: concepts, models, calculations and surface structure analyses.

1. Introduction.....	pag. 317
2. Measurements and conservation laws	» 318
3. Positron and electron solid interactions.....	» 323
3'1. Overview: time and length scales	» 323
3'2. Electron (positron)-solid scattering: the model.....	» 327
3'3. Selected ground-state properties: work functions and effective potentials	» 328
3'4. Excited states: diffraction of incident leptons	» 331
3'5. Optical potential	» 333
3'6. Ion core scattering factors	» 335
4. Multiple-scattering theory	» 339
4'1. <i>T</i> -matrix formalism	» 339
4'2. Computer programs	» 341
4'3. Tests of the model: examples.....	» 345
5. Surface structure analyses	» 349
6. Epilogue.....	» 355

K. F. CANTER – Slow-positron optics.

1. Moderator-target characterization.....	» 361
2. Aberrations.....	» 367

K. F. CANTER – Positron annihilation microprobe and re-emission microscope.

1. Positron re-emission microscope (PRM)	» 371
2. Positron annihilation microprobe (PAM).....	» 377
3. Intrinsic resolution limits on positron annihilation microprobes.....	» 378
4. Optical-resolution limits on positron annihilation microprobe resolution	» 378

K. F. CANTER – Experimental considerations for low-energy positron diffraction.

1. Beam requirements for LEPD.....	» 385
2. Beam flux requirements	» 386
2'1. Hitting the sample	» 391
2'2. Beam normalization.....	» 392
2'3. Combined LEED and LEPD measurements.....	» 394
3. Future directions	» 395
3'1. Metals	» 395
3'2. LEPD <i>I-V</i> profile calculation without the muffin-tin model	» 396
3'3. LEPD holography.....	» 396
4. Conclusion	» 397

G. LARICCHIA – Positronium beams and surfaces.

1. Introductory remarks	» 401
2. Fast-Ps production: methods and beam qualities	» 402

3. Applications	pag. 413
4. Outlook	» 416

T. HYODO – Positronium spectroscopies for the study of the surface of fine particles.

1. Introduction.....	» 419
2. Two- γ annihilations of Ps.....	» 421
2'1. Self-annihilation of p -Ps	» 421
2'2. Magnetic-field-induced 2γ annihilation	» 422
2'3. Pickoff annihilation.....	» 423
2'4. 2γ annihilation from spin conversion	» 424
3. Time-selected momentum measurements	» 424
4. Ps spectroscopies of the surface of α -SiO ₂	» 427
4'1. Ps work function	» 427
4'2. Ps energy loss by collisions with the grain surface.....	» 430
4'3. Pickoff spectroscopy of the surface electrons	» 433
4'4. Paramagnetic defects produced on the surface	» 435

IV. DEFECT PROBING

R. M. NIEMINEN – Electronic structure and positron spectroscopy of solids and surfaces.

1. Introduction.....	» 443
2. Total energies and ground-state properties	» 444
2'1. Density-functional theory	» 445
2'2. Beyond the local-density approximation.....	» 448
2'3. Excitations.....	» 450
3. Moving ions: molecular dynamics	» 450
3'1. Molecular-dynamics simulation	» 450
3'2. Molecular dynamics with quantum-mechanical forces	» 452
3'3. More approximate techniques.....	» 453
4. Computation of electron states for low-symmetry systems	» 456
5. Examples of applications.....	» 459
5'1. Defects and impurities in transition metals	» 459
5'2. Defects in semiconductors.....	» 460
5'3. Molecular-dynamics simulation of liquids	» 465
6. Positrons as probes of defects and surfaces	» 466
6'1. Positron implantation.....	» 466
6'2. Epithermal positron motion.....	» 467
6'3. Positron mobility and diffusion	» 468
6'4. Positron trapping	» 469
6'4.1. Resonance trapping.....	» 470
6'4.2. Charged-defect trapping.....	» 470
6'4.3. Surface trapping and quantum reflection	» 472
6'5. Diffusion-annihilation equations	» 473
6'6. Two-component density-functional theory	» 475
6'7. Positron affinities in solids	» 477

6'8.	Applications to defects in metals and semiconductors	pag.	478
6'8.1.	Defect spectroscopy	»	478
6'8.2.	Paramagnetic defects	»	481
6'8.3.	Applications to positron surface states	»	481
6'8.4.	Applications to exotic materials	»	483
7.	Final remarks	»	484

P. HAUTOJÄRVI and C. CORBEL – Positron spectroscopy of defects in metals and semiconductors.

1.	Introduction.....	»	491
1'1.	On the role of atomic defects in solids	»	491
1'2.	The role of positron annihilation in defect spectroscopy	»	492
1'3.	Organization of the lecture	»	492
2.	Positrons in solids	»	493
2'1.	Stopping and thermalization	»	493
2'1.1.	Stopping profile	»	493
2'1.2.	Slowing down and thermalization time	»	494
2'2.	Positron diffusion and mobility	»	495
2'3.	Positron wave function	»	498
2'4.	Annihilation characteristics	»	499
3.	Experimental techniques	»	500
3'1.	Positron lifetime spectroscopy	»	500
3'2.	Doppler-broadening spectroscopy	»	502
4.	Positron trapping	»	505
4'1.	Trapping model and kinetic equations	»	505
4'2.	Annihilation fractions, momentum parameters and average life-time	»	507
4'3.	Trapping coefficient	»	508
4'4.	Detrapping	»	509
5.	Applications to metals	»	511
5'1.	Trapping rate into vacancies and vacancy clusters	»	511
5'2.	Positron lifetime in vacancies and vacancy clusters	»	513
5'3.	Vacancies at thermal equilibrium	»	514
5'4.	Vacancies after irradiations	»	515
5'5.	Voids and gas bubbles	»	516
5'6.	Precipitates in alloys	»	517
6.	Positrons and defects in semiconductors	»	517
6'1.	Free and trapped positrons	»	517
6'2.	Charge states	»	518
6'3.	Charge state and positron lifetime in vacancies	»	518
6'4.	Trapping in semiconductors: vacancies in various charge states	»	520
6'5.	Positron Rydberg states	»	522
6'6.	Trapping into Rydberg states	»	523
7.	Concluding remarks	»	525
Appendix.	– Positron lifetime spectroscopy and trapping model in practice	»	526
A'1.	Source corrections	»	526
A'2.	Decomposition and the average lifetime	»	526
A'3.	One type of defects, no detrapping	»	527
A'4.	One type of defects with detrapping	»	528
A'5.	Two types of defects, no detrapping	»	528

C. CORBEL and P. HAUTOJÄRVI – Positron annihilation spectroscopy of vacancies and acceptors in semiconductors.

Introduction.....	pag. 533
1. Defects in semiconductors.....	» 535
1'1. Charge states.....	» 535
1'2. Occupancy of a charge state.....	» 537
1'3. Free carriers and Fermi level.....	» 538
2. Charge states of vacancies: thermal transition.....	» 540
2'1. As-grown <i>n</i> -type GaAs: the As vacancy.....	» 540
2'2. As-grown <i>n</i> -type $\text{Al}_x\text{Ga}_{1-x}\text{As}$ layers: the DX deep donor level.....	» 544
2'3. Electron-irradiated Si:P: the vacancy-phosphorus pair.....	» 545
3. Charge states of vacancies: optical transition.....	» 547
3'1. As-grown SI-GaAs: the As vacancy.....	» 548
3'2. As-grown <i>n</i> -type $\text{Al}_x\text{Ga}_{1-x}\text{As}(\text{Si})$ layers: the DX deep donor level.....	» 549
4. Metastable effects after illumination.....	» 551
4'1. As-grown SI-GaAs: the EL2 mid-gap donor.....	» 551
4'2. As-grown <i>n</i> -type $\text{Al}_x\text{Ga}_{1-x}\text{As}$ layers: the DX deep donor level.....	» 554
4'3. The atomic structure of EL2 and DX.....	» 555
5. Acceptor spectroscopy: vacancies or ions.....	» 556
5'1. Electron-irradiated GaAs: the Ga vacancy and antisite.....	» 556
6. Conclusion.....	» 559
Appendix.....	» 560

Y. C. JEAN – Characterizing free volumes and holes in polymers by positron annihilation spectroscopy.

1. The free-volume and hole theory in molecular substrates.....	» 563
2. PAS as a unique probe for free-volume characterization.....	» 564
3. Theoretical aspects of positron annihilation in condensed matter.....	» 566
4. Data analysis of PAL spectra.....	» 569
5. Methods of determining free-volume distributions.....	» 571
6. Examples of experimental free-volume results by PAL.....	» 571
6'1. Mean hole size: temperature and pressure dependence.....	» 571
6'2. Free-volume hole distributions.....	» 574
7. Comparison with free-volume theories.....	» 575
7'1. Simha-Somecynsky's theory.....	» 576
7'2. Turnbull-Cohen's theory.....	» 576
8. Conclusion.....	» 577

A. DUPASQUIER and G. OTTAVIANI – Defect profiling by positron beams and other techniques.

Introduction.....	» 581
PART I. – An overview on subsurface defects: production and detection.....	» 582
I.1. Origin and type of subsurface defects.....	» 582
I.1'1. Polishing and thinning a crystal.....	» 583
I.1'2. Chemical reactions.....	» 583
I.1'3. Ion implantation.....	» 584
I.1'4. Overlayer deposition.....	» 586

I.2.	Simulations of ion-matter interactions	pag.	586
I.3.	Experimental techniques for defect profiling	»	588
I.4.	Rutherford backscattering spectroscopy	»	590
I.5.	Channelling effects on Rutherford backscattering	»	592
I.6.	Elastic-recoil detection analysis	»	597
I.7.	Secondary-ion mass spectrometry	»	599
I.8.	Transmission electron microscopy	»	601
I.9.	Double-crystal X-ray diffraction	»	604
I.10.	Infrared spectroscopy	»	605
I.11.	Deep-level transient spectroscopy	»	608
I.12.	Spreading-resistance measurements	»	610
PART II. – Defect profiling with variable-energy positron beams.			» 612
II.1.	Basic notions on positron annihilation spectroscopy for defect studies	»	612
II.2.	Defect profiling by the Doppler-broadening method	»	613
II.3.	PAS-DB measurements with controlled-energy beams: experimental apparatuses	»	618
II.4.	The back-diffusion method	»	621
II.5.	Thermal-diffusion approximation and analysis procedures	»	624
II.6.	Factors influencing the accuracy of the analysis	»	630
II.6'1.	Diffusion constant D_+ and mobility μ_+	»	630
II.6'2.	Electric fields	»	632
II.6'3.	Positron implantation profile	»	634
II.6'4.	Specific trapping rate ν	»	636
II.6'5.	Characteristic lineshape parameters	»	636
II.6'6.	Cut-off energy $E_{\min}$	»	637
II.7.	Two-group diffusion model	»	638
II.8.	Current research in the field of defect profiling by positron annihilation	»	639
P. ASOKA-KUMAR and K. G. LYNN – Characterization of defects in Si and SiO ₂ -Si using positrons.			
1.	Introduction	»	659
2.	Si grown on Si by low-temperature MBE	»	659
3.	Radiation damage in the SiO ₂ -Si system	»	664
4.	Interface trap behavior under annealing and hydrogenation	»	669
5.	Positron studies of metal-oxide-semiconductor structures	»	672
6.	Model for interface positron trap sites	»	676
7.	Conclusion	»	679
V. J. GHOSH, K. G. LYNN and D. O. WELCH – Positron implantation in solids.			
1.	Introduction	»	683
2.	The Monte Carlo procedure	»	688
3.	Monte Carlo results	»	696
4.	Low-energy contributions to positron implantation	»	704

5. Comparison of Monte Carlo results with experimental data	pag. 707
6. A simple diffusion model for positron implantation.....	» 711
7. Conclusion	» 716
Appendix A	» 718
Appendix B	» 720
Appendix C	» 723
Appendix D	» 724
S. TANIGAWA, A. UEDONO, L. WEI and R. SUZUKI – Defects in semi- conductors observed by 2D-ACAR and by a slow-positron beam.	
1. Introduction.....	» 729
2. The origin of the effect of point defects on the angular correlation of an- nihilation radiation (ACAR) in semiconductors	» 730
3. Near-surface defects observed by a slow-positron beam	» 743
4. Perspective for the use of new positron techniques.....	» 751
APPENDIX – Abstracts of posters presented by participants to the NATO Workshop	» 753
INDICE ANALITICO.....	» 767
