

CONTENTS

Foreword	vii
Preface	ix
Charles Stein (photographs)	xiii
Memories of the Stein Workshop (photographs)	xv
Zero biasing in one and higher dimensions, and applications <i>Larry Goldstein and Gesine Reinert</i>	1
Poisson limit theorems for the appearances of attributes <i>Ourania Chryssaphinou, Stavros Papastavridis and Eutichia Vaggelatos</i>	19
Normal approximation in geometric probability <i>Mathew D. Penrose and J. E. Yukich</i>	37
Stein's method, Edgeworth's expansions and a formula of Barbour <i>Vladimir Rotar</i>	59
Stein's method for compound Poisson approximation via immigration-death processes <i>Aihua Xia</i>	85
The central limit theorem for the independence number for minimal spanning trees in the unit square <i>Sungchul Lee and Zhonggen Su</i>	103

Stein's method, Markov renewal point processes, and strong memory-less times <i>Torkel Erhardsson</i>	119
Multivariate Poisson–binomial approximation using Stein's method <i>A. D. Barbour</i>	131
An explicit Berry–Esseen bound for Student's t -statistic via Stein's method <i>Qi-Man Shao</i>	143
An application of Stein's method to maxima in hypercubes <i>Z. D. Bai, L. Devroye and T. H. Tsai</i>	157
Exact expectations of minimal spanning trees for graphs with random edge weights <i>James Allen Fill and J. Michael Steele</i>	169
Limit theorems for spectra of random matrices with martingale structure <i>F. Götze and A. N. Tikhomirov</i>	181
Characterization of Brownian motion on manifolds through integration by parts <i>Elton P. Hsu</i>	195
On the asymptotic distribution of some randomized quadrature rules <i>Wei-Liem Loh</i>	209
The permutation distribution of matrix correlation statistics <i>A. D. Barbour and Louis H. Y. Chen</i>	223
Applications of Stein's method in the analysis of random binary search trees <i>Luc Devroye</i>	247
