

Contents

Summary	1
Zusammenfassung	3
Introduction.....	6
Importance of Aging research.....	6
Enigma of Aging	6
Theories for Aging	7
Different Species: Different Aging.....	8
Aim.....	9
Experimental design	9
Genesis of the study	10
Transcriptional profiling of brain tissue in long-lived mice.....	11
Interdependence of tissue-specific aging to organismal-aging in mice.....	12
Signatures of Aging across species.....	14
Imbalances in Clock genes with aging.....	14
Summary of Manuscripts.....	16
Manuscript I: Transcriptional profiling reveals protective mechanisms in brains of long-lived mice	16
Manuscript II: Tissue-specific gene expression changes are associated with aging in mice... ..	16
Manuscript III: Signatures of Senescence and Inflammation are conserved in Aging Tissues and Species.....	17
Manuscript IV: Inter-species and inter-organ comparisons reveal aging-associated changes in clock gene expression.	18
Closing discussion.....	79
Background knowledge.....	79
Survival curve: An integral part of design	81
Establishing a robust pipeline for big-data analysis.....	81
Comparison of tissues with aging in mice.....	83
Inter-species comparison with aging.....	84
Inflammation: Underpinnings of aging	85
Regulation of spliceosome machinery	86
Regulation through miRNA	87
Effect of aging on core clock genes	88
Bibliography.....	90
Ehrenwortliche erklärung.....	93
Curriculum vitae	94
Angaben zum Eigenanteil	96
Acknowledgement	100
