1	Introduction	1
2	Theoretical background	7
2.1	Scanning tunneling microscopy and spectroscopy	8
2.1.1	Spin-polarized tunneling	13
2.2	Kondo physics	17
2.2.1	Single impurity Anderson model	18
2.2.1.1	Symmetric SIAM	20
2.2.1.2	Asymmetric SIAM	21
2.2.1.3	Kondo effect	23
2.2.2	Numerical renormalization group method	26
2.2.2.1	Logarithmic discretization	28
2.2.2.2	Mapping on a semi-infinite chain	30
2.2.2.3	Iterative diagonalization	32
2.2.3	Two impurity Anderson model	34
2.2.3.1	Direct exchange coupling	35
2.2.3.2	Indirect exchange coupling	37
2.2.3.3	Single-particle hopping	38
2.3	Quantum phase transitions	38
3	Transferring spin into an extended π orbital of a large molecule	41
3.1	Introduction	42
3.2	Transferring spin into an extended π orbital of a large molecule	44
4	A chemically driven quantum phase transition in a two-molecule Kondo system	63
4.1	Introduction	64
4.2	A chemically driven quantum phase transition in a two-molecule Kondo system	66
4.3	Supplementary Information to A chemically driven quantum phase transition in a two-molecule Kondo system	77
5	In search of collective spin phenomena	89
5.1	Introduction	90
5.2	Experimental methods	91

5.2.1	Sample preparation	91
5.2.2	Spectroscopy	91
5.3	Structure and electronic properties	92
5.4	Kondo effect	96
5.5	Role of quantum interference	103
5.6	Origin of the side peaks	106
5.7	Collective behavior?	112
5.8	Conclusion	114
6	Formation of a spin hybrid	117
6.1	Introduction	118
6.2	Spin-dependent hybridization of molecules	120
6.3	Sample and magnetic tip preparation	122
6.4	Co islands on Cu(111)	124
6.5	Adsorption of TPT on Co islands	128
6.6	Electronic properties of TPT on Co islands	131
6.7	Magnetic properties of the hybrid system	133
6.8	Conclusion	139
7	Summary and Outlook	141
8	List of publications	145
	Bibliography	147
