

Contents

1	Motivation for IDS	1
1.1	History	1
1.1.1	Menial Tasks	1
1.1.2	Managerial Tasks	2
1.1.3	Entrepreneurial Tasks	3
1.2	“Intelligent” in IDS	3
1.2.1	The Meaning of “Intelligent” in IDS	3
1.3	Risks in “Intelligent” IDS	4
1.4	IDS Scope	6
1.4.1	Strategic IDS	6
1.4.2	Tactical IDS	7
1.4.3	Operational IDS	7
1.5	Summary	8
2	Modelling and Choices	9
2.1	Some Example Problems and Their Solutions	9
2.1.1	Selecting Numbers from a Set	9
2.1.2	The Knapsack Problem	11
2.1.3	Breaking Chocolate	12
2.2	The Basics of Problem Modelling	13
2.2.1	Fundamental Concepts and Definitions	13
2.2.2	Definitions of Modelling Concepts	14
2.2.3	Modelling Some Example Problems	15
2.2.4	Modelling with Arrays	20
2.3	Summary	26
3	Examples of Industrial Decisions	27
3.1	Strategic Optimisation Examples	27
3.1.1	Case Histories	27
3.1.2	Issues in Strategic Planning	29

3.2	Tactical Decision Support	30
3.2.1	Case Histories	30
3.2.2	Issues in Tactical Scheduling	31
3.3	Operational Control	32
3.3.1	Case Histories	32
3.3.2	Issues in Operational Control	34
3.4	Intelligent Decision Support in Practice	34
3.5	Summary	35
4	Problem Modelling in MiniZinc	37
4.1	Variables, Constraints and Parameters	38
4.1.1	A Model for a Simple Problem	38
4.2	Modelling the Knapsack Problem	39
4.2.1	Arrays	39
4.2.2	Data	40
4.2.3	Knapsack with Item Weights and Values	41
4.3	Assignment and Travelling Ecologist	42
4.3.1	Constraining All the Items in an Array with “forall”	42
4.3.2	Assignment Problem	42
4.3.3	Travelling Ecologist Problem	44
4.4	Summary	45
4.5	Exercises	45
4.5.1	Worker Task Assignment Exercise	45
4.5.2	Knapsack Exercise	46
5	Algorithms and Complexity	49
5.1	Combinatorial Problems	49
5.1.1	Chess	49
5.1.2	The Number of Candidate Solutions for Larger Problem Instances	50
5.2	Generate and Test	52
5.2.1	A Method for Testing a Finite Number of Candidates	52
5.2.2	Lazy and Eager Generate and Test	53
5.3	The Concept of Algorithmic Complexity	54
5.3.1	Can We Measure Problem Difficulty?	54
5.3.2	Complexity Is a Measure of Scalability	54
5.3.3	Complexity Is an Approximation	55
5.4	Measuring Complexity	57
5.4.1	Worst-Case Performance	57
5.4.2	Constant Complexity	57
5.4.3	Logarithmic Complexity	58
5.4.4	Linear Complexity	59
5.4.5	Exponential Complexity	60
5.4.6	Polynomial Complexity	61
5.5	P and NP	62

5.6	Problem Complexity	64
5.6.1	Algorithms for Solving IDSS Applications	64
5.6.2	NP Complete Problems	65
5.6.3	Complexity Class <i>NP-hard</i>	67
5.6.4	Relating the Different Complexity Classes.....	67
5.7	Summary.....	68
6	Constraint Classes	69
6.1	Introduction.....	69
6.1.1	Five Classes of Constraints.....	69
6.2	Finite Domain Constraints	70
6.2.1	Finitely Many Combinations to Check	70
6.2.2	Logical Combinations of Constraints.....	72
6.3	Propositional Constraints	74
6.4	Linear Constraints	75
6.4.1	Floating Point Expressions.....	75
6.4.2	Expressive Power and Complexity of Floating Point Constraints	77
6.4.3	Linear Expressions and Constraints	77
6.5	Linear Constraints over Integers and Floats.....	79
6.6	Nonlinear Constraints	80
6.6.1	Nonlinear Functions and Expressions	80
6.6.2	Nonlinear Problems	81
6.7	Summary.....	84
7	Constraint Classes and Solvers	85
7.1	Linear Programming Models	85
7.1.1	Linear Expressions and Constraints	85
7.1.2	Solving Linear Problems	86
7.2	Propositional Models.....	89
7.2.1	Proposition Expressions and Propositional Clauses	89
7.2.2	Benchmark Results	89
7.2.3	Converting a Propositional Model to Propositional Clauses	90
7.2.4	Resolution for Solving Clausal Models	93
7.2.5	Encoding Numbers in Propositional Models	94
7.2.6	Lazy Clause Generation	94
7.3	Finite Integer Models	95
7.3.1	Finitely Many Combinations to Check	95
7.3.2	Tables	95
7.3.3	Minimising the Number of Rows in Intermediate Tables	97
7.3.4	Minimising the Number of Columns	98
7.3.5	Dynamic Programming.....	99
7.3.6	Complexity of Finite Integer Models	101
7.3.7	Answer to Minimising Intermediate Table Widths.....	102

7.4	Linear Constraints over Integers and Floats.....	103
7.4.1	Unbounded Integer Constraints	103
7.4.2	Branch and Bound	103
7.4.3	Cutting Planes	105
7.4.4	Logical Combinations of Linear Constraints.....	105
7.4.5	Linear Constraints over Integer Variables	107
7.4.6	Complexity of Linear Constraints over Integers and Floats	108
7.5	Nonlinear Constraints	108
7.5.1	Solving Non-linear Problems	108
7.5.2	Complexity of Nonlinear Constraints.....	110
7.6	Summary.....	111
8	Constraint Classes in MiniZinc	113
8.1	Logical Connectives.....	113
8.2	Comprehensions.....	115
8.3	Predicates and Functions.....	116
8.3.1	A Simple Predicate and a Simple Function	116
8.3.2	Predicates and Functions with Local Variables	118
8.3.3	Predicates for Flexibility	119
8.4	Global Constraints and Built-In Functions.....	120
8.4.1	Two Problems Modelled with <i>alldifferent</i> in MiniZinc ...	121
8.5	Constraint Classes.....	122
8.5.1	Reification	122
8.5.2	Unbounded Integer Constraints	123
8.5.3	Floating Point Expressions.....	124
8.5.4	Linear Expressions and Constraints	124
8.5.5	Linear Constraints over Integers and Floats	125
8.5.6	Nonlinear Problems	126
8.6	Specifying the Solver in MiniZinc	128
8.7	Summary.....	129
8.8	Exercises.....	129
8.8.1	Trucking Exercise	129
8.8.2	Tour Leader Exercise	130
9	Integrating Solvers with Search	133
9.1	Generate and Test	133
9.2	Finite Domain Propagation	135
9.2.1	Arc Consistency	137
9.2.2	Bounds Consistency	138
9.3	Tree Search	139
9.3.1	Complete Search Without Following a Wrong Branch ...	140
9.3.2	Depth-First Search with Backtracking.....	141

9.4	Reordering the Search Tree	142
9.4.1	Variable Order	142
9.4.2	Value Order	144
9.4.3	Combining Search Heuristics	145
9.5	Methods of Exploring the Search Tree	147
9.5.1	Hard and Easy Problems	147
9.5.2	Depth-First Search	148
9.5.3	Breadth-First Search	149
9.6	Optimisation	150
9.6.1	Admissible Estimates of Cost	150
9.6.2	Best First Search	151
9.6.3	Branch and Bound	152
9.6.4	Why Optimisation Is Hard	153
9.7	Learning and Restarts	154
9.7.1	Restarts	154
9.7.2	Learning	155
9.8	Incomplete Search Methods	156
9.8.1	Bounded Backtrack Search and Limited Discrepancy Search	156
9.9	Summary of Tree Search	157
9.10	Local Search	157
9.10.1	Hill Climbing	161
9.10.2	Escaping from Local Optima	161
9.10.3	Large Neighbourhood Search	163
9.10.4	Local Search and Learning	163
9.11	Summary	164
10	Search Control in MiniZinc	165
10.1	The Search Annotation	165
10.2	Controlling Variable Order	166
10.3	Controlling Value Order	168
10.4	Combining Multiple Search Variants	170
10.5	Restarting	173
10.6	Summary	174
10.7	Exercises	175
10.7.1	Maximize the Differences	175
10.7.2	Develop a Roster	175
11	Uncertainty	177
11.1	What Is Uncertainty	177
11.1.1	Probability	177
11.1.2	Confidence	178
11.2	Working with Probability	179
11.2.1	Multiplying Probability by Cost	179
11.2.2	Probability Distribution	181
11.2.3	Dependent and Independent Probability Distributions ...	183

11.3	Scenarios.....	184
11.3.1	Two Scenarios	184
11.3.2	Four Scenarios	185
11.3.3	Scenarios Approximating Continuous Probability Distributions	187
11.3.4	Solving Problems with Multiple Scenarios.....	189
11.4	Statistics	190
11.4.1	Sampling	190
11.4.2	The Law of Large Numbers.....	191
11.4.3	Large Numbers and Small Probabilities	193
11.5	Summary.....	193
12	IDSS for Optimisation: The Future	195
12.1	Transport and Congestion.....	195
12.2	Energy	196
12.3	Automation	196
12.4	Integrated Supply Chains	197
12.5	4th Industrial Revolution.....	198
12.6	Learning, Optimisation, and Policies.....	199
12.7	Summary.....	199
Appendix A		201
A.1	Big O Notation	201
A.2	Working Out the Complexity of an Algorithm.....	201
Solutions.....		203
References.....		217
