Acknowledgements	15
Abbreviations	17
Preface	21
1 Origins in the dark	29
Virus diseases in the Netherlands before the discovery of viruses	
Smallpox, public health measures and immunization	35
Measles, lack of prevention?	46
Rabies, treatment and public health measures	49
Poliomyelitis, the summer disease	56
Influenza, not just a common cold	58
Human and animal medicine in the nineteenth century	63
Progress from confluence: The meeting of public health and laboratory science	65
2 Redefining viruses	67
The development and reception of the virus concept in the Netherlands	
The discovery of a remarkable anomaly	69
Bacteriophages and the re-definition of viruses	74
Advances in virus research and the rediscovery of Beijerinck's virus concept	77
The relevance of Beijerinck in the Dutch medical context	80
Viruses after the 1930s: New insights in light of technical developments	81
3 On the fringes	87
The Dutch work on viruses, 1900-1950	
In the immediate wake of the first discoveries...	88
The Spanish influenza pandemic of 1918: Its impact in the Netherlands	91
Dutch progress on rabies, smallpox, polio, and measles, 1900-1950	94
The early Dutch centres of activity on virus diseases	96

Amsterdam	97
Laboratory for Hygiene, University of Amsterdam, and Laboratory of the Department for Tropical Hygiene of the Colonial Institute	97
The State Veterinary Research Institute	102
Leiden	103
Laboratory for Tropical Hygiene, Leiden University	104
Laboratory for Bacteriology, Leiden University	106
Laboratory for Bacteriology and Experimental Pathology of the Netherlands Institute for Preventive Medicine	107
Clinic of Internal Medicine of the Academic Hospital	108
Utrecht	109
Laboratory for Hygiene, State University of Utrecht	109
National Laboratory of the National Institute of Public Health in Utrecht	109
Groningen	111
Laboratory for Hygiene, State University of Groningen	111
International developments in techniques	112
4 From cell culture to the molecular revolution	115
The rise of medical virology and its organization	
The first wave: Virus culture	117
First wave developments in Dutch clinical virology	119
The second wave: Immunological and visualization techniques for rapid detection	122
Second wave developments in Dutch clinical virology	124
The third wave: The molecular revolution	125
Third wave developments in Dutch clinical virology	126
Public health laboratories and medical virology	127
The basic and the applied: Separate or joint ways of organization?	130
Dutch Societies and medical virology	130
The Netherlands Society for Microbiology	130
The Netherlands Society for Medical Microbiology	132
The Dutch Working Group for Clinical Virology	132
Expansion of the working group	134
Working group meetings	134
Epidemiological reports	135
Professionalization	137
Standardization and external quality control	137

The Working Group for Molecular Diagnostics of Infectious Diseases (WMDI)	138
European societies and Dutch medical virology	138
European Group for Rapid Viral Diagnosis	138
European Association against Virus Diseases	139
European Society for Clinical Virology	139
European Society for Virology	139
Waves of development and organization of clinical and fundamental virology	140
5 Medical virology in the Netherlands after 1950	143
Laboratories and institutes	
The impact of the AIDS pandemic on Dutch virology	144
Amsterdam	145
University of Amsterdam and the Academic Medical Center (AMC)	145
State Veterinary Research Institute	147
Regional Public Health Laboratory of the Municipal Health Service of Amsterdam	147
Central Laboratory of the Netherlands Red Cross Blood Transfusion Service (CLB) and Red Cross Blood Bank of Amsterdam	148
VU University Medical Center Amsterdam (VUmc)	149
Amsterdam Cohort Studies (ACS)	150
Leiden	154
Leiden University Medical Centre	154
Laboratory of Bacteriology and Experimental Pathology and Central Clinical Virology Laboratory	155
Department of Clinical Respiratory Virology	156
Laboratory for Tropical Hygiene	157
Utrecht/Bilthoven	158
National Institute of Public Health and Environment Bilthoven	158
Laboratory for Medical Microbiology, UMC Utrecht	163
University of Utrecht, Veterinary Faculty	163
Groningen	164
UMC Groningen and Virology Unit of the Regional Public Health Laboratory of the Municipal Health Service	164
Nijmegen/Tilburg	165
Radboud University Nijmegen	165
St Elisabeth Hospital, Tilburg	167

Rotterdam	168
Regional Public Health Laboratory of the Municipal Health Service of Rotterdam	168
Erasmus MC	170
Maastricht	173
Maastricht UMC	173
General hospitals	173
Military Medical Service	174
Commercial companies	174
Philips Duphar	175
Organon Teknika	175
Crucell	176
Delft Diagnostic Laboratory (DDL)	177
Viroclinics Biosciences BV	177
6 Techniques and instruments	179
Their introduction in the Netherlands and the main contributions of the Dutch	
Four types of filters	181
Light microscopy	182
Tissue culture – early days	182
Tissue culture and cell monolayers	185
Cell culture and vaccine production	189
Phase-contrast microscopy	190
Electron microscopy	190
Reception of the electron microscope in the virology field in the Netherlands	193
Immunofluorescence	194
Enzyme-immunoassay or enzyme-linked immunosorbent assay	195
Agar gel electrophoresis	196
Introducing DNA into mammalian cells	197
Pepscan and combinatorial chemistry	198
Nucleic acid purification	199
Nucleic acid extraction and the isothermal nucleic acid sequence-based amplification	200
Excerpta Medica	200
Conclusion: Offstage in the spotlight	201

7 Dutch virology in the tropics	203
From colonial to international virology	
Indonesia and the former Dutch East Indies	206
Smallpox	207
Yellow fever, dengue and scrub typhus	210
Poliomyelitis	212
Rabies	213
Suriname and the Netherlands Antilles, former West Indies	214
Smallpox	215
Yellow fever	216
Dengue	219
Other arboviruses	219
Poliomyelitis	220
Rabies	222
Africa: Kenya, Uganda and Ethiopia and West Africa	223
Kenya	224
Uganda	227
Ethiopia	228
West Africa	229
Accessibility of essential medicines	229
 8 From cancer mice in the roaring 1920s to oncogenes and signalling molecules in the booming 1990s	 231
Amsterdam	233
Netherlands Cancer Institute	233
Laboratory for Hygiene, later the Department of Medical Microbiology and the Department of Virology, University of Amsterdam	242
Department of Pathology, Free University of Amsterdam	243
Leiden	243
Laboratory of Physiological Chemistry, Leiden University	243
Laboratory of Immuno-haematology, Leiden University	244
Utrecht	245
Laboratory of Physiological Chemistry, Utrecht University	245
Nijmegen	246
Laboratory for Biochemistry, Department of Biochemistry, Radboud University	246

Rijswijk	247
Radiobiological Institute and Primate Centre	247
Rotterdam	247
Erasmus MC	247
Groningen	248
Laboratory of Molecular Virology, State University of Groningen	248
Delft/Rijswijk	248
Delft Diagnostic Laboratory	248
Working Group on Persistent Virus Infections and Oncogenesis	249
Conclusion	250
9 Virus vaccines and immunization programmes	253
Introduction	253
Smallpox vaccine	256
Rabies vaccine	258
Poliomyelitis vaccine	259
Rubella, mumps, measles combination vaccine	262
Special Department Immunobiology	263
Influenza vaccine	264
Influenza immunization in specific risk groups	264
Commercial production of influenza vaccines	265
Hepatitis B vaccine	265
Production of hepatitis B vaccine in the Netherlands	267
Occupationally acquired infections in vaccine-production laboratories	267
Cooperation in the development of vaccine-production methods	269
Ultimate sale of public health sector vaccine production	270
Success of the RVP	271
10 Conclusions	273
List of institutes and laboratories	291
References	295
Index	349
Index of names	349
Index of subjects	354
