Introduction	1
Presentation of the Monograph	1
Notations and Preliminaries	3
Part 1. The Asymptotic Traffic Distributions of Random Matrices	7
Chapter 1. Statement of the Main Theorem and Applications	9
1.1. Asymptotic free independence of large matrices	9
1.2. Convergence in traffic distribution	10
1.3. Statements of the results of Part 1	15
Chapter 2. Definition of Asymptotic Traffic Independence	19
2.1. Combinatorial form of traffic distributions and injective version	19
2.2. Asymptotic traffic independence, properties	23
2.3. A criterion of lack of asymptotic free independence	29
2.4. Proof of the main theorem	31
Chapter 3. Examples and Applications for Classical Large Matrices	39
3.1. Wigner matrices	39
3.2. Unitary Haar and uniform permutation matrices	44
3.3. Diagonal matrices and the factorization property	50
Part 2. Traffics and their Independence	53
Chapter 4. Algebraic Traffic Spaces	55
4.1. Non-commutative probability spaces	55
4.2. Algebraic traffic spaces	56
Chapter 5. Traffic Independence and the Three Classical Notions	65
5.1. Definition and statement	65
5.2. Link with free independence	67
5.3. Link with tensor independence	69
5.4. Link with Boolean independence	70
Chapter 6. Limit theorems for independent traffics	75
6.1. Constant traffics and law of large numbers	75
6.2. Central limit theorem	77
Bibliography	87
