

Contents

<i>Contributors</i>	<i>xv</i>
<i>Preface</i>	<i>xxi</i>
1. Aging and the hypothalamic-pituitary-thyroid axis	1
Leonidas H. Duntas	
1. Introduction	2
2. Search strategy and selection criteria	3
3. Is aging a disease?	3
4. The field of geroscience and the thyroid	4
5. HPT axis morphology in aging	6
6. Hypothalamic and pituitary physiology and rhythmicity	6
7. Thyroid diseases and the hypothalamic-pituitary axis	8
8. Conclusions	11
References	11
2. Hypothalamic aging and hormones	15
Zi-Jian Cai	
1. The introduction	16
2. The senescent degeneration of reproductive system	17
3. The special aging of skin and its causing SCN aging via SWS	20
4. The peripheral aging under the regulation of the GH/IGF1 axis	22
5. The peripheral aging under the regulation of PVN	24
6. The aging later in brain and later off leptin	27
7. The preliminary classification	28
8. The conclusions	30
The conflict of interest	31
References	31
3. Hypothalamic gene transfer of BDNF promotes healthy aging	39
Lei Cao, Seemaab Ali, and Nicholas J. Queen	
1. Metabolic problems of aging	40
2. CNS energy regulation and the hypothalamic-sympathoneural-adipocyte axis	43
3. Molecular therapy of obesity with an autoregulatory BDNF vector	47
4. Hypothalamic gene transfer of BDNF promotes healthy aging	49

5. Conclusions and future directions	52
Acknowledgments	57
Declaration of interests	57
References	57
4. Melatonin and healthy aging	67
Daniel P. Cardinali	
1. Introduction	68
2. Melatonin as a chronobiotic	69
3. Use of melatonin in sleep aging	74
4. Cytoprotection by melatonin in animal models of MS and AD	78
5. Use of melatonin in MS and AD patients	80
6. Conclusions	82
Acknowledgments	83
Conflict of interest	83
References	83
5. Luteinizing hormone and the aging brain	89
Megan Mey, Sabina Bhatta, and Gemma Casadesus	
1. Introduction	90
2. Central LH synthesis in aging and CNS function as a unifying hypothesis	97
3. Conclusion	98
References	99
Further reading	103
6. Leptin regulation of hippocampal synaptic function in health and disease	105
Kirsty Hamilton and Jenni Harvey	
1. Leptin	106
2. Leptin receptor and its signaling pathways	107
3. Leptin regulation of hippocampal synaptic function	109
4. Leptin and the aging brain	113
5. Leptin and Alzheimer's disease risk	116
6. Neuroprotective actions of leptin	116
7. Therapeutic potential of leptin	121
References	122
7. Endocannabinoids and aging—Inflammation, neuroplasticity, mood and pain	129
Yongsoon Park and Bruce A. Watkins	
1. Endocannabinoids	130
2. Neuroinflammation, disease, eCB and oxylipins	135

Contents

3. Exercise effects on eCB: Differences and similarities in human and animal studies	139
4. The role of N-3 PUFA in brain and aging	147
5. Conclusions	156
Acknowledgment	158
References	158
8. Parathyroid hormone levels and aging: Effect on balance	173
Lavanya Murthy and Gustavo Duque	
1. Aging, frailty and sarcopenia	173
2. Falls and balance	174
3. Aging and parathyroid hormone (PTH) levels	175
4. The biological effects of PTH on muscle	176
5. What is known about the role of PTH in balance?	177
6. Conclusion	180
References	180
9. Insulin and aging	185
Mirian Ayumi Kurauti, Gabriela Moreira Soares, Carine Marmementini, Gabriela Alves Bronczek, Renato Chaves Souto Branco, and Antonio Carlos Boschero	
1. Introduction	186
2. Insulin secretion and aging	186
3. Insulin clearance and aging	192
4. Insulin sensitivity and aging	197
5. Insulin action in the healthy longevity	206
6. Conclusion	209
Acknowledgments	209
References	209
10. Sirtuins and the prevention of immunosenescence	221
Denise Lasigliè	
1. Immunosenescence	222
2. Hematopoiesis in young and old age	223
3. Innate immunosenescence	226
4. Hormones and immunosenescence	228
5. Sirtuins	233
6. Future directions and perspectives	246
Aknowledgments	247
References	247

11. Alterations in cyclic nucleotide signaling are implicated in healthy aging and age-related pathologies of the brain	265
Nicole Gorny and Michy P. Kelly	
1. Introduction	266
2. Healthy aging	268
3. Alzheimer's disease, dementia, and mild cognitive impairment (MCI)	276
4. Parkinson's disease	285
5. Huntington's disease	288
6. Conclusions and future directions	290
Acknowledgments	291
References	291
12. Aging and FGF23-klotho system	317
Makoto Kuro-o	
1. Discovery of the <i>klotho</i> gene	318
2. Klotho protein function	319
3. Structure of Klotho protein	320
4. FGF23 and kidney	321
5. FGF23 and parathyroid	324
6. FGF23 and chronic kidney disease	325
7. Evolution of Klotho	326
8. Phosphate and aging	327
9. Concluding remarks	328
References	329
13. Aging and sex hormones in males	333
Maria Chiara Decaroli, Sara De Vincentis, and Vincenzo Rochira	
1. Introduction	334
2. Influence of aging on testosterone and its metabolites: Findings from the literature	335
3. Mechanisms underlying age-related testosterone decline	337
4. Hormonal assays: Tips, tricks and pitfalls	342
5. The clinical diagnosis of hypogonadism in aging men	345
6. Management of LOH	352
7. Conclusions	358
References	358

Contents

14. Sexual dimorphism, aging and immunity	367
Veena Taneja	
1. Introduction	368
2. Epigenetics in sex-bias response	369
3. Regulation of epigenetics by sex hormones	375
4. Sex chromosome and dimorphic immune response	376
5. Sex hormones and immunity	377
6. Sex-hormones in autoimmunity	380
7. Sex-bias in mucosal immunity	382
8. Infections, aging and sex-bias	385
9. Conclusions	387
Acknowledgments	388
References	389
15. Hormones and bone loss across the menopause transition	401
Arun S. Karlamangla, Albert Shieh, and Gail A. Greendale	
1. Osteoporosis and the menopause transition	401
2. Sex hormones changes over the menopause transition	405
3. Sex hormones and onset of rapid bone loss	405
4. Bone resorption markers and the rapid phase of bone loss	410
5. Summary and future directions	411
Acknowledgments	413
References	413
16. Relaxin abrogates genomic remodeling of the aged heart	419
Guillermo Romero and Guy Salama	
1. Introduction	420
2. Biochemistry of the aging heart	421
3. Structural changes in the aging heart	424
4. Relaxin	425
5. Relaxin signaling	427
6. Effects of relaxin in the aged heart	430
7. Tissue remodeling	432
8. Electrical remodeling	434
9. Mechanistic aspects of the effects of RLX in the heart	435
10. Relaxin in the clinic	438
11. Concluding remarks	439
Acknowledgment	439
References	439

17. Role of FoxO transcription factors in aging-associated cardiovascular diseases	449
Sneha Mishra, Venkatraman Ravi, and Nagalingam Ravi Sundaresan	
1. Introduction	450
2. Role of FoxO in cardiac remodeling	451
3. Role of FoxO transcription factors in vascular remodeling and dysfunction	457
4. Role of FoxO in myocardial ischemia and ischemia-reperfusion injury	462
5. Role of FoxO in regulating metabolic homeostasis of heart	464
6. Role of FoxO in regulating diet-induced alterations in heart	465
7. Role of FoxO in modulating autophagy and proteasomal degradation	466
8. Role of FoxO in regulating age-dependent cardiac functions in flies	468
9. Conclusion	469
References	469
18. Ghrelin and adipokines: An overview of their physiological role, antimicrobial activity and impact on cardiovascular conditions	477
Luís Perpétuo, Pierre Marie Voisin, Francisco Amado, Christophe Hirtz, and Rui Vitorino	
1. Introduction	478
2. Ghrelin, the “hunger hormone”	480
3. Adipokines	481
4. Antibacterial activity of ghrelin and adipokines	494
5. The role of ghrelin and its impact on cardiovascular systems and conditions	496
6. Role of adipokines in cardiovascular diseases	498
7. Conclusion	501
Acknowledgments	502
Conflicts of interest	502
References	502
19. Sex hormones and cognition in aging	511
Caroline Gurvich, Jessica Le, Natalie Thomas, Elizabeth H.X. Thomas, and Jayashri Kulkarni	
1. Introduction	512
2. Sex hormones and their associations with cognition	512
3. Endogenous hormones and cognition in women of reproductive age	513
4. Sex hormones and cognition during healthy aging	515
5. Sex hormones and cognitive changes in menopause	516
6. Sex hormones and their role in neurodegenerative disorders	518

Contents

7. Hormone therapy and cognition	521
8. Conclusion	524
References	525
20. Role of hormones in sarcopenia	535
T. Priego, A.I. Martín, D. González-Hedström, M. Granado, A. López-Calderón, and Daniel Cardalini	
1. Introduction	536
2. The GH-IGF-I axis	539
3. Insulin resistance and glucose regulation	542
4. Adrenal hormones	544
5. Gonadal steroids	546
6. Adipokines	549
7. Angiotensin II	553
8. Vitamin D	554
9. Thyroid hormones	555
10. Concluding remarks	556
References	557
21. Sources of lumbar back pain during aging and potential therapeutic targets	571
T. Peter Li, Amit Jain, and Xu Cao	
1. Introduction	572
2. Paravertebral muscles and ligaments stabilize the FSU	572
3. Pathophysiology of lumbar back pain	573
4. Facet joint degeneration as a source of pain	575
5. Intervertebral disc disruption as a source of pain	575
6. Vertebral endplate degeneration as a source of pain	576
7. Roles of transforming growth factor- β (TGF β) and parathyroid hormone (PTH) in maintaining the homeostasis of the FSU	577
8. Conclusion	578
Acknowledgment	578
References	579
22. Leydig cell aging: Molecular mechanisms and treatments	585
V. Papadopoulos and B.R. Zirkin	
1. Introduction: Testosterone production and the aging testis	586
2. Cell biology of Leydig cell steroidogenesis	589
3. Steroidogenic cholesterol: Sources, trafficking and targeting to CYP11A1	592

4. SITE proteins in cholesterol import machinery and steroidogenesis	594
5. Oxidant/antioxidant imbalance and reductions in testosterone production	597
6. Existing treatments to increase serum T levels	599
7. Targeting critical protein-protein interactions to reverse LOH	599
8. Conclusions and future directions	601
Acknowledgments	602
References	602
23. Adiponectin/AdipoRs signaling as a key player in testicular aging and associated metabolic disorders	611
Mayank Choubey, Ashutosh Ranjan, and Amitabh Krishna	
1. Introduction	612
2. Regulatory nexus between aging, obesity hormones, and male reproduction	613
3. Essential role of adipokines in regulating male reproductive physiology	614
4. Adiponectin/AdipoRs: History, structure, and metabolic role	615
5. Adiponectin/AdipoRs as a regulator of male reproductive physiology	619
6. Impact of aging on male reproduction	623
7. Adiponectin/AdipoRs in testicular aging	624
8. Summary	628
References	629
