

Contents

1	Introduction	1
1.1	Motivation	1
1.2	State of the art	2
1.3	Purpose and scope of this thesis	4
1.4	Outline of this thesis	5
2	Constitutive equations and numerical implementation	6
2.1	Constitutive equations	6
2.1.1	Elasto-plastic material behaviour	6
2.1.2	Mohr-Coulomb	8
2.1.3	Hypoplastic material model	12
2.1.4	Damage modelling for elasto-plastic material	15
2.2	Numerical implementation	17
2.2.1	Finite element method	17
2.2.2	Discrete element method	23
3	Selection of granules and description of single grains	24
3.1	Selection of granules	24
3.2	Determination of grain properties	26
3.2.1	Single particle tests	27
3.2.2	Statistical representation	29
3.2.3	Numerical example	36
4	Determination of bulk particle properties	40
4.1	Oedometer test	41
4.2	Triaxial test	42
4.2.1	Experimental setup	42
4.2.2	Experimental results	43
4.2.3	Numerical simulation	45
4.3	Friction test	46
4.4	Uniaxial compression test	48
4.4.1	Experimental setup	49
4.4.2	Experimental results	50
4.4.3	Numerical simulation and parameter fitting	52
4.5	Tensile test	61
5	Experimental investigation	64
5.1	Experimental setup	64
5.2	Experiments without stiffener	66
5.2.1	Experiment 1	67

5.2.2	Experiment 2	70
5.2.3	Experiment 3	74
5.2.4	Experiment 4	75
5.2.5	Conclusion for experiments without stiffener	77
5.3	Experiments with stiffener	78
5.3.1	Experiment 5	79
5.3.2	Experiment 6	81
5.3.3	Experiment 7	84
5.3.4	Conclusion of experiments with stiffener	86
6	Numerical investigation	88
6.1	Simplified side hull structure	88
6.1.1	Simulations without granules	89
6.1.2	Simulation with granules	95
6.2	Realistic side hull structure	106
6.2.1	Comparison of materials	107
6.2.2	Changes in hull design	110
7	Conclusions and Outlook	113
	Appendix	116
A	Material parameter identification	116
A.1	Experimental results for material models	116
A.2	Numerical results for material models	117
	Bibliography	119
