<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xvii</i>
1. Thyroid hormone regulation of adult hippocampal neurogenesis: Putative molecular and cellular mechanisms	1
Darshana Kapri, Sashaina E. Fanibunda, and Vidita A. Vaidya	
1. Introduction	2
2. Thyroid hormone and thyroid hormone receptors (TRs)	3
3. Adult hippocampal neurogenesis	5
4. Thyroid hormone signaling and regulation of adult hippocampal neurogenesis	9
5. Role of TRs in the modulation of adult hippocampal neurogenesis	14
6. TR target genes and relevance to the effects of thyroid hormone on adult hippocampal neurogenesis	18
7. Relevance of mitochondrial and lipid metabolism to the effects of thyroid hormone on adult hippocampal neurogenesis	20
8. Conclusions	22
Acknowledgments	23
References	23
2. Synergistic gene regulation by thyroid hormone and glucocorticoid in the hippocampus	35
Jose Ezekiel C. Espina and Pia D. Bagamasbad	
1. Thyroid hormone and glucocorticoid action in the hippocampus	36
2. Effects of thyroid hormone on the hippocampus	41
3. Effects of stress and glucocorticoid on the hippocampus	46
4. Thyroid hormone and glucocorticoid synergy in development	49
5. Conclusions and recommendations	64
Acknowledgment	65
References	65

3. Oxytocin and vasopressin in the hippocampus	83
Ana-Maria Zagrean, Ioana-Antoaneta Georgescu, Mara Ioana Iesanu, Rosana-Bristena Ionescu, Robert Mihai Haret, Anca Maria Panaitescu, and Leon Zagrean	
1. Oxytocin and vasopressin	84
2. Hippocampus	93
3. Role of oxytocin and vasopressin in neurodevelopment	100
4. Roles of oxytocin and vasopressin in the adult hippocampus	108
5. Conclusion	113
References	114
4. Steroid hormones and hippocampal neurogenesis in the adult mammalian brain	129
Travis E. Hodges, Tanvi A. Puri, Samantha A. Blankers, Wansu Qiu, and Liisa A.M. Galea	
1. Adult hippocampal neurogenesis	130
2. Sex differences in neurogenesis in the hippocampus of adults	132
3. What is the function of adult neurogenesis in the hippocampus?	133
4. Stress, glucocorticoids, and neurogenesis across development	135
5. Neurogenesis and estrogens	146
6. Hippocampal neurogenesis and androgens	153
7. Conclusions	155
References	156
5. Steroidogenic enzymes in the hippocampus: Transcriptional regulation aspects	171
María Florencia Rossetti, Jorgelina Varayoud, and Jorge Guillermo Ramos	
1. Introduction	173
2. Hippocampus, memory and neurosteroids	174
3. Hippocampal steroidogenic enzymes and neurosteroid synthesis	176
4. Physiological and pathological effects on steroidogenic enzyme expression	177
5. Transcriptional regulation of steroidogenic enzyme expression: insights into DNA methylation.	179
6. Histone modification and non-coding RNA	187
7. Conclusions and future perspectives	188
Acknowledgments	189
Declaration of interest	189
Funding	189
References	189

6. Ectonucleotidases in the hippocampus: Spatial distribution and expression after ovariectomy and estradiol replacement	199
Ivana Grković, Nataša Mitrović, and Milorad Dragić	
1. Introduction	200
2. Purinergic signaling system	201
3. Ectonucleotidases family	203
4. Spatial distribution of ectonucleotidases in female rat hippocampus and influence of OVX and E2	206
5. E2 application modulates ectonucleotidases in the hippocampal synapses of male rats	212
6. Conclusion	214
Acknowledgment	214
References	214
7. Actions of Klotho on hippocampal neuronal cells	223
Jennifer Mytych	
1. Introduction	223
2. Klotho structure, function, and activity	224
3. Klotho and hippocampus	226
4. Conclusion and perspectives	238
Acknowledgments	239
References	239
8. Intracellular and extracellular cyclic GMP in the brain and the hippocampus	247
Lucas Taoro-González, Andrea Cabrera-Pastor, María Sancho-Alonso, and Vicente Felipo	
1. Synthesis, degradation and secretion of cGMP	248
2. cGMP mediators and functions in health and disease	251
3. cGMP in the brain and the hippocampus	254
4. Extracellular cGMP and brain function	267
5. Conclusions and future directions	275
References	276
9. The role of growth hormone in hippocampal function	289
Enrique Juárez-Aguilar, Juan David Olivares-Hernández, Citlalli Regalado-Santiago, and Fabio García-García	
1. Introduction	290
2. Hippocampus structure and function	290

3. Growth hormone-receptor system	292
4. Growth hormone regulation of hippocampal function	293
5. Growth hormone deficiency (GHD) therapy and the hippocampus	301
6. Growth hormone therapy and the cognitive improvement in the traumatic injured brain	302
7. Growth hormone and hypoxia-ischemia hippocampal injury	303
8. Conclusions	304
Acknowledgments	306
References	306
10. Leptin regulation of synaptic function at hippocampal TA-CA1 and SC-CA1 synapses	315
Jenni Harvey	
1. Introduction	316
2. Leptin and leptin receptors	316
3. LepR signal transduction	317
4. LepR expression in the CNS	319
5. Leptin regulation of hippocampal SC-CA1 synapses	320
6. Leptin induces LTP at adult SC-CA1 synapses	321
7. Role of NMDA receptor subunits	323
8. Excitatory TA-CA1 synapses	323
9. Synaptic plasticity at TA-CA1 synapses	324
10. Activity-dependent LTD at TA-CA1 synapses	325
11. Leptin has the ability to induce LTD at adult TA-CA1 synapses	328
12. Leptin induces rapid structural changes	329
13. Functional implications of the synaptic actions of leptin	329
14. Age-related changes in leptin function	331
15. Conclusions	332
References	332
11. Ghrelin mediated hippocampal neurogenesis	337
Jeffrey S. Davies	
1. Ghrelin	338
2. Ghrelin's molecular and cellular mechanisms of action	341
3. The Hippocampus	345
4. Conclusions and future directions	354
Acknowledgment	355
References	355

12. Ghrelin-O-acyltransferase (GOAT) acylates ghrelin in the hippocampus	369
Masako Isokawa	
1. GOAT is necessary for ghrelin physiology	370
2. Cellular localization of GOAT in the hippocampus	371
3. Binding profile of acyl ghrelin in the hippocampal subfields	373
4. Acylation of ghrelin occurs in the hippocampus	375
5. Role of GOAT in the hippocampal function	378
6. Conclusions and future directions	388
Acknowledgments	389
References	389
13. Hippocampal orexin receptors: Localization and function	393
Mahmoud Elahdadi Salmani, Masoumeh Sarfi, and Iran Goudarzi	
1. Overview	394
2. Origin of the orexinergic system	395
3. Distribution of the orexinergic system	396
4. Orexin in the hippocampus	398
5. Orexin receptor expression in the hippocampus	403
6. Hippocampal OX1R functional significance	404
7. Orexin receptor 2 functional significance	407
8. Concluding remarks and future directions	408
Acknowledgments	411
References	411
Further reading	421
14. A role for insulin-like growth factor-1 in hippocampal plasticity following traumatic brain injury	423
Hannah C. Williams, Shaun W. Carlson, and Kathryn E. Saatman	
1. Introduction	424
2. Modulation of hippocampal synaptic structure and function by TBI and IGF-1	428
3. Potential for IGF-1 to facilitate neurogenesis in the traumatically injured brain	433
4. Future directions	442
Acknowledgments	443
References	443

15. Effects of Glucagon-like peptide 1 (GLP-1) analogs in the hippocampus	457
Yolanda Diz-Chaves, Salvador Herrera-Pérez, Lucas C. González-Matías, and Federico Mallo	
1. Peripheral GLP-1	458
2. GLP-1 in the brain	460
3. The GLP-1 receptor	461
4. GLP-1 analogs effects on memory and learning	462
5. GLP-1 analogs effects on food intake and food-motivated behavior	465
6. Anti-inflammatory properties of GLP-1 analogs in the hippocampus	466
7. GLP-1 analogs and neurodegenerative disorders: Focusing Alzheimer's disease	469
8. Conclusions and future directions	470
Acknowledgments	470
References	471
 16. Highlights regarding prolactin in the dentate gyrus and hippocampus	 479
Marta Carretero-Hernández, Leonardo Catalano-Iniesta, Enrique J. Blanco, María José García-Barrado, and José Carretero	
1. Introduction	480
2. The prolactin receptor in the central nervous system	481
3. The origin of prolactin in the central nervous system	485
4. The effects of prolactin on the hippocampus	487
References	496
