

Peiqing Liu

A General Theory of Fluid Mechanics

Science Press
Beijing

Springer

Contents

1	Foundation of Fluid Mechanics	1
1.1	Combination of Early Development of Fluid Dynamics with Calculus	1
1.2	Methods of Describing Fluid Motion	6
1.3	Establishment and Application of Differential Equations for Ideal Fluid Motion	13
1.4	Differential Equation of Viscous Fluid Motion and Vortex Transport Equation	26
1.5	Establishment and Application of Boundary Layer Theory	32
1.6	Laminar Flow Transition Phenomenon and Stability Theory	39
1.7	Turbulence Phenomenon and Its Characteristics	44
1.8	Statistical Theory of Turbulence	51
1.9	Engineering Turbulence Theory	57
1.10	Turbulence Model	61
1.11	Turbulence Advanced Numerical Simulation Technology	67
1.12	Multi-scale Discussions of Turbulent Eddies	69
2	Aerodynamics	79
2.1	Development of Aerodynamics	79
2.2	Low-Speed Airfoil Flow	84

2.3	Development and Influence Mechanism of Boundary Layer Near Airfoil Surface	97
2.4	Low-Speed Flow Around Wing	108
2.5	Basic Theory of Compressible Flow	117
2.6	Solution of Compressible Flow	135
2.7	Hypersonic Aerodynamics	138
2.8	Principle of Aeroacoustics	144
2.9	Stall Characteristics of Low-Speed Airfoil and Wing	153
2.10	Interaction Between Shock Wave and Boundary Layer in Supersonic Flow	161
2.11	The Leading Role of Aerodynamics in the Development of Modern Aircraft	171
3	Hydrodynamics	175
3.1	Development of Hydrodynamics	175
3.2	Liquid Motion	180
3.2.1	Ideal Liquid Motion	180
3.2.2	Viscous Liquid Motion	180
3.2.3	Cavitation and Cavitation Erosion	181
3.2.4	Multiphase Flow	181
3.2.5	Non-newtonian Fluid Flow	182
3.2.6	Non Pressure Flow (Open Flow)	183
3.2.7	Pressure Flow	183
3.2.8	Flow Induced Vibration (Hydroelastic Problem)	184
3.3	One-Dimensional Flow Theory and Mechanical Energy Loss	184
3.3.1	Theory of One-Dimensional Flow	184
3.3.2	Mechanical Energy Loss	187
3.4	Steady Flow Along a Pressure Pipeline	192
3.4.1	Simple Pipe Flow	192
3.4.2	Water Pump System	194
3.4.3	Water Turbine System	196
3.5	Steady Flow in Open Channel	197
3.5.1	Overview	197
3.5.2	Steady Uniform Flow in Open Channel	199
3.5.3	Steady Nonuniform Gradually Varied Flow	201
3.5.4	Water Surface Curves for the Steady Gradually Varied Flow	206
3.5.5	Rapidly Varied Flow in the Open Channel	208

3.6	Unsteady Flow in a Pressure Pipeline	228
3.6.1	Overview	228
3.6.2	Basic Equation of One-Dimensional Unsteady Flow	231
3.6.3	Water Hammer and Its Governing Equations	233
3.6.4	Water Oscillating Flow	236
3.7	Unsteady Gradually Varied Flow in Open Channel	238
3.7.1	Overview	238
3.7.2	Differential Equation of Unsteady Gradually Varied Flow	239
3.8	Fundamentals of Water Wave Hydrodynamics	242
3.8.1	Overview	242
3.8.2	Basic Characteristics of Wave Motion	245
3.8.3	Types of Waves	248
3.8.4	Linear Wave Theory (Micro Amplitude Wave Theory)	252
3.8.5	Wave with Finite Amplitude	264
3.8.6	Solitary Wave	275
3.9	Applications in Hydraulics	282
3.9.1	Water Resources and Hydropower Engineering	282
3.9.2	Ship Engineering	284
3.9.3	Lubrication and Hydraulic Transmission	286
3.9.4	Marine and Coastal Engineering	288
4	Computational Fluid Dynamics	297
4.1	Derivation of Computational Fluid Dynamics	297
4.2	Discrete Techniques and Iterative Methods	300
4.3	Application of Computational Fluid Dynamics	304
4.3.1	Numerical Solution of Low Velocity Flow	304
4.3.2	Numerical Solution of Transonic Flow	309
4.3.3	Numerical Solution of Supersonic Flow	310
4.4	Commercial Software for Computational Fluid Dynamics	312
4.5	Numerical Simulation of Flow Field for a Large Axial Flow Fan	316
4.5.1	Problem Description	316
4.5.2	The Physical Model	316
4.5.3	Mesh Generation and Boundary Conditions	317
4.5.4	Results	318

4.6	Numerical Simulation of Flow-Field in a Large Lowspeed Closed-Circuit Aeroacoustics Wind Tunnel	321
4.6.1	Problem Description	321
4.6.2	The Physical Model	323
4.6.3	Mesh Generation and Boundary Conditions	325
4.6.4	Results	325
5	Experimental Fluid Mechanics	333
5.1	Classical Fluid Mechanics Experiment	333
5.2	Similarity Principle	339
5.3	Application of Similarity Theory	344
5.4	Flow Visualization Measurement Technique	349
5.5	Flow Velocimetry Technique	361
5.6	Experimental Measurement Method for Dynamic Forces	369
5.7	Test Error Analysis	373
6	Wind and Water Tunnel Equipment	381
6.1	Development of Wind Tunnel Equipment	381
6.2	Wind Tunnel Type	386
6.3	Low-Speed Wind Tunnel	392
6.4	Introduction to Typical Low-Speed Wind Tunnels	401
6.5	Supersonic Wind Tunnel	417
6.6	Transonic Wind Tunnel	420
6.7	Hypersonic Wind Tunnel	431
6.8	Variable Density Wind Tunnel	436
6.9	Water Tunnel (or Channel) Equipment	441
7	Flight Mystery and Aerodynamic Principles	445
7.1	Flying Fantasy	445
7.2	Exploratory Cognition of Flight	450
7.3	Rapid Development of Aircraft	454
7.4	Flight Principle	460
7.5	Wing Shape and Aerodynamic Coefficient	476
7.6	Supercritical Wing	484
7.7	Winglet	495
7.8	Slender Fuselage	498
7.9	Moment in Stable Flight and Tail	501
7.10	Demand of Aircraft Power (Engine)	507
7.11	High-Lift Device of an Aircraft	514
7.12	Aircraft Landing Gear	527
7.13	Aircraft Aerodynamic Noise	537

7.14	Supersonic Aircraft	548
7.15	Drag Reduction Technology for Large Transport Aircraft	555
8	Introduction to Celebrities in Fluid Mechanics	581
8.1	Archimedes (287–212 B.C.)	581
8.2	Leonardo Da Vinci (1451–1519)	582
8.3	Galileo (1564–1642)	583
8.4	Pascal (1623–1662)	585
8.5	Newton (1643–1727)	586
8.6	Leibniz (1646–1716)	587
8.7	Bernoulli (1700–1782)	588
8.8	Euler (1707–1783)	589
8.9	D'Alembert (1717–1783)	590
8.10	Lagrange (1736–1813)	591
8.11	Laplace (1749–1827)	592
8.12	Kelly (1773–1857)	593
8.13	Gauss (1777–1855)	594
8.14	Poisson (1781–1840)	596
8.15	Navier (1785–1836)	597
8.16	Cauchy (1789–1857)	598
8.17	Saint-Venant (1797–1886)	600
8.18	Poiseuille (1799–1869)	601
8.19	Darcy (1803–1858)	602
8.20	Froude (1810–1879)	603
8.21	Stokes (1819–1903)	604
8.22	Helmholtz (1821–1894)	604
8.23	Kelvin (1824–1907)	606
8.24	Riemann (1826–1866)	607
8.25	Langley (1834–1906)	609
8.26	Mach (1838–1916)	610
8.27	Reynolds (1842–1912)	611
8.28	Rayleigh (1842–1919)	612
8.29	Boussinesq (1842–1929)	613
8.30	Laval (1845–1913)	614
8.31	Joukowski (1847–1921)	615
8.32	Lilienthal (1848–1996)	616
8.33	Lamb (1849–1934)	617
8.34	Lorentz (1853–1928)	618
8.35	The Wright Brothers (1867–1912, 1871–1948)	620
8.36	Lanchester (1868–1946)	621

8.37	Prandtl (1875–1953)	622
8.38	Karman (1881–1963)	622
8.39	Taylor (1886–1975)	624
8.40	Zhou Peiyuan (1902–1993)	625
8.41	Kolmogorov (1903–1987)	626
8.42	Whittle (1907–1996)	628
8.43	Schlichting (1907–1982)	629
8.44	Landau (1908–1968)	630
8.45	Guo Yonghuai (1909–1968)	631
8.46	Qian Xuesen (1911–2009)	632
8.47	Lu Shijia (1911–1986)	634
8.48	Shen Yuan (1916–2004)	636
8.49	Batchelor (1920–2000)	636
8.50	Whitcomb (1921–2009)	637
8.51	Lighthill (1924–1998)	638
8.52	Zhuang Fenggan (1925–2010)	639

Bibliography	643
