Chapter 1 Theories and Tools for the Assessment of Environmental Impacts of Human Activities	1
<i>M. J. Black, A. L. Borrión and O. Mwabonje</i>	
1.1 Introduction	1
1.2 The Increasing Global Population, Potential Outcomes and Environmental Impacts	2
1.3 Development and Sustainability	6
1.4 What is Life Cycle Assessment	8
1.4.1 Early Development of Life Cycle Assessment	10
1.4.2 Life Cycle Assessment Environmental Impact Categories	11
1.5 Approaches to Understanding the Impacts of Human Activities	13
1.5.1 Earth's Carrying Capacity	13
1.5.2 Planetary Boundaries	14
1.5.3 Industrial Ecology and Cleaner Production	17
1.5.4 Circular Economy	19
1.6 Summary and Introduction to Life Cycle Assessment Case Studies	21
References	22
Chapter 2 The Circular Economy: Concept, Tools and Implementation	27
<i>Teresa Domenech and Julia A. Stegemann</i>	
2.1 The Circular Economy as a Solution to Impacts of the Linear Economy	27

2.2	The Concept of the Circular Economy	30
2.3	A Circular Economy in Different Industrial Sectors	35
2.3.1	Industrial Transitions to a Circular Economy	35
2.3.2	The Construction Industry and the Circular Economy	36
2.3.3	Plastics and the Circular Economy	38
2.3.4	Textiles and the Circular Economy	40
2.4	Supporting the Transition to a Circular Economy: Assessment of Material Flows and Impacts	42
2.5	New Business Models for Value Creation in the Circular Economy	44
2.6	Policy Support for the Circular Economy	46
2.7	Drivers and Challenges for the Transition to a Circular Economy	48
	References	49
Chapter 3	Life Cycle Assessment as a Metric for Circular Economy	54
	<i>X. C. Schmidt Rivera, P. Balcombe and M. Niero</i>	
3.1	Introduction	54
3.2	Frameworks Implementing Circular Economy Using LCA	55
3.3	Circular Economy Metrics and Indicators Using LCA	56
3.4	Life Cycle Assessment Methodology	59
	Step 1: Definition of Goal and Scope	60
	Step 2: Life Cycle Inventory Analysis	62
	Step 3: Life Cycle Impact Assessment (LCIA)	63
	Step 4: Life Cycle Interpretation	64
3.5	Life Cycle Assessment Standards and Guidelines	64
3.5.1	Carbon Footprint of Products	66
3.5.2	Environmental Labeling	66
3.5.3	Country Specific Guidance	67
3.5.4	Sector-specific Guidance	68
3.5.5	Organization Level	68
3.5.6	Water Footprint	69
3.5.7	Environmental Life Cycle Costing	69
3.5.8	Social Life Cycle Assessment	70
3.5.9	Integration of Environmental, Economic and Social: Sustainability Assessments	71
3.6	Benefits and Challenges of Using LCA in CE	72
3.7	Summary	74
	References	74

Chapter 4	Case Study – Construction Material (Steel)	81
	<i>J. P. Birat</i>	
4.1	Introduction	81
4.2	The Main Features of Construction in the Light of LCA Methodology	83
4.3	The Physics of Construction Relevant to LCA Issues	84
4.4	LCA of a Building: A Case Study	87
4.5	Environmental Product Declarations (EPDs)	97
4.6	Green Building Rating System	98
4.7	Perspective on Construction and LCA Related to the Energy and Ecological Transitions	99
4.8	Social Value of Construction	101
4.9	Conclusions	101
	Acknowledgements	102
	References	102
Chapter 5	Case Study – Construction Materials (Cement, Aggregates and Concrete Products)	105
	<i>Md. Uzzal Hossain and Chi-Sun Poon</i>	
5.1	Introduction	105
5.2	Life Cycle Assessment	107
5.2.1	Framework	107
5.2.2	Methodology	109
5.3	Circular Economy: Concept and Approach	109
5.4	Case Studies of Production of Construction Materials in Hong Kong	110
5.4.1	LCA of Cement Production	110
5.4.2	LCA of Aggregate Production	118
5.4.3	LCA of Concrete Products Production	121
5.4.4	LCA of Concrete Production	122
5.5	Conclusions and Future Outlooks	130
	Acknowledgements	130
	References	130
Chapter 6	Assessing the Environmental Benefits of Using Glass Powder as a Supplementary Cementitious Material in a Context of Open-loop Recycling	134
	<i>J. Deschamps, A. Tagnit-Hamou, B. Fournier and B. Amor</i>	
6.1	Introduction	134

6.2	Materials and Method	137
6.2.1	Goal and Scope Definition	137
6.2.2	Life Cycle Inventory	138
6.2.3	Life Cycle Impact Method	140
6.2.4	Interpretation	141
6.3	Results and Discussion	142
6.3.1	Comparative LCA Results	142
6.3.2	Interpretation	145
6.3.3	Discussion	147
6.4	Conclusion	148
	Acknowledgements	149
	References	149
Chapter 7	Life Cycle Assessment of Sustainable Polymer Packaging	153
	<i>Miao Guo and Nilay Shah</i>	
7.1	Introduction	153
7.1.1	Sustainable Polymers from Renewable Resources	153
7.1.2	Life Cycle Assessment (LCA)	156
7.1.3	LCAs of Sustainable Polymers	157
7.2	Case Study 1 – Starch-based Bio-composites	158
7.2.1	LCA Methodology	158
7.2.2	Inventory Analyses	159
7.2.3	'Cradle-to-factory-gate' LCIA for Starch-based Composites	159
7.2.4	Discussion	163
7.3	Case Study 2 – Energy Profiling of Starch-glucose Biosynthesis Polymers	164
7.3.1	LCA Methodology	164
7.3.2	Experimental Methods	166
7.3.3	Life Cycle Inventory Analysis	166
7.3.4	Life Cycle Impact Assessment	168
7.4	Remarks on Sustainable Biopolymers	172
	Acknowledgements	174
	References	174
Chapter 8	Case Study: Textiles	178
	<i>Ş. Altun Kurtoğlu</i>	
8.1	Introduction	178
8.2	Fast Fashion, Textile Wastes and Recycling	180
8.3	Environmental Impacts of Fibres	183
8.3.1	Environmental Impacts of Natural Fibres	183

8.3.2	Cotton	183
8.3.3	Other Natural Fibres: Wool	185
8.3.4	Environmental Impacts of Man-made Fibres	186
8.4	Environmental Impacts of Textile Processes	187
8.4.1	Environmental Impacts of Yarn-spinning Processes	187
8.4.2	Environmental Impacts of Weaving	188
8.4.3	Environmental Impacts of Knitting	188
8.4.4	Environmental Impacts of Nonwoven Production	189
8.4.5	Environmental Impacts of Wet Processes	189
8.5	Eco-design	192
8.6	Environmental Certification	192
8.7	Life Cycle Assessment in Textile Production	193
8.7.1	LCA Studies in Fibre Production	195
8.7.2	LCA Studies in Textile Processes	197
8.7.3	LCA Studies in Use Phase, Wastes and Recycling – Some Examples	197
8.7.4	Case Study – Polyethylen Terephthalate (PET)	199
8.8	The Textile Industry and the Circular Economy – Discussion	203
	References	204
Chapter 9	Refining Made Circular: The Potential for Substituting Biogenic for Fossil Carbon	212
	<i>V. Moreau, F. Meylan and S. Erkman</i>	
9.1	Introduction	212
9.2	Methodology	214
9.2.1	Inputs	215
9.2.2	Outputs	218
9.3	Results and Discussion	224
9.3.1	Biomass Inputs	224
9.3.2	Fuel and Chemical Outputs	225
9.4	Conclusion	228
	References	229
Chapter 10	Case Study – Packaging	232
	<i>M. Niero and A. Manzardo</i>	
10.1	Introduction	232
10.1.1	Packaging: Evil or Necessary Good?	232

10.1.2	Packaging in the Circular Economy from a Policy Perspective	233
10.1.3	Overview of CE Strategies Relevant for Packaging	234
10.2	Life Cycle Assessment of Packaging	237
10.2.1	Focus at the Product Level	237
10.2.2	Organizational Life Cycle Assessment in the Packaging Sector	240
10.3	Methodological Challenges for LCA of Packaging in the CE	244
10.3.1	Functional Unit Definition	244
10.3.2	System Boundaries Definition	245
10.3.3	End-of-life Modelling	248
10.3.4	Modelling of Reuse	250
10.3.5	Impact Assessment and Footprinting	251
10.4	Implications for the Packaging Sector and its use of LCA Towards CE	253
10.4.1	Trends and Challenges for CE Implementation in the Packaging Sector	253
10.4.2	The Role of Design and Business Models	253
10.4.3	The Role of Food-packaging Systems and Consumer Perceptions	254
10.4.4	Food Safety as a Constraint for CE Development in the Packaging Sector	255
10.5	Conclusions	256
	References	256
Chapter 11	Case Study: Agricultural Crop Production	262
	<i>T. L. Oldfield, W. Chen, F. Murphy and N. M. Holden</i>	
11.1	Introduction	262
11.2	Agricultural Systems – Linear vs. Circular	265
11.3	Methodology to Compare Linear and Circular Agricultural Systems	266
11.4	Examples of Crop System ACWB Valorisation	267
11.4.1	Crop Production (Numerous) → Residue (Examples) → Animal Feed (Business-as-usual)	267
11.4.2	Crop Production (Rice) → Residue → Composting → Crop Production	271
11.4.3	Crop Production (Olives) → Residue → Pyrolysis → Crop Production (+ Energy)	273

11.4.4	Crop Production (Potato) → Residue → Biocomposite	279
11.4.5	Crop Production (Tomato) → Residue → Biosolarization → Crop Production	280
11.5	Discussion and Conclusions	282
11.5.1	Design Out Waste and Pollution	282
11.5.2	Keep Products and Materials in Use for as Long as Possible	284
11.5.3	Restorative and Regenerative Practices for Natural Systems	284
	Acknowledgements	285
	References	285

Chapter 12 Livestock Production 290

*Alexandre Strapasson, Collins Oduor and
Beatriz Domeniconi*

12.1	Introduction	290
12.2	Fundamental Dynamics of Livestock Production	292
12.2.1	Feed Conversion Ratio (FCR)	294
12.2.2	Intensification of Animals	295
12.2.3	Animal Density	295
12.2.4	System Boundaries of Livestock Production	296
12.3	Case Study on Sustainable Beef Production in Brazil	296
12.4	Case Study on Carbon Cycles in Kenya's Pasturelands	302
12.4.1	Pathways of Carbon (C) Losses in the Pasturelands of Kenya	303
12.4.2	Direct Carbon Emissions from Livestock	305
12.4.3	Carbon Emissions from Processing Livestock Products: Reflections on the Dairy Sector	306
12.5	Case Study on Global Livestock Production: a Whole-system Approach	306
12.5.1	The Global Calculator's Simulations on Livestock and Dietary Changes by 2050	308
12.6	Conclusions	311
	Acknowledgements	311
	References	311

Chapter 13 Case Study – Bioenergy Life-cycle Analysis and Implications on Bioenergy-driven Circular Economy	317
<i>Hao Cai and Michael Wang</i>	
13.1 Background	317
13.1.1 Case Study 1: Corn Ethanol	319
13.1.2 Case Study 2: Sugarcane Ethanol	323
13.1.3 Case Study 3: Corn Stover Ethanol	326
13.1.4 Case Study 4: Soybean Biodiesel	329
13.1.5 Case Study 5: Algae Renewable Diesel	331
13.2 Discussion and Conclusion	333
Acknowledgements	334
References	334
 Chapter 14 Resource Impacts of Fully Renewable Energy Systems: The Case of Metals	 337
<i>V. Moreau</i>	
14.1 Introduction	337
14.2 Materials and Methods	340
14.2.1 Energy Scenarios	341
14.2.2 Renewable Energy Technology Scenarios	341
14.2.3 Metal Inventories	344
14.2.4 Resource Impacts	344
14.3 Results	346
14.3.1 Resource Impacts of Renewable Energy Scenarios	346
14.3.2 Disaggregated Impact Scores	350
14.4 Discussion	350
14.5 Conclusions	353
References	354
 Chapter 15 Linking Life Cycle Assessment to the Wider Circular Economy	 358
<i>S. J. McLaren</i>	
15.1 Introduction	358
15.2 Concepts and Tools in Environmental Sustainability	360
15.3 Some Fundamental Characteristics in Framing of Environmental Problems	362
15.3.1 Environmental, Social and Economic Dimensions of Sustainability	362

<i>Contents</i>	xxiii
15.3.2 Strong and Weak Conceptions of Sustainability	363
15.3.3 Relative and Absolute Perspectives in Environmental Sustainability	365
15.3.4 Humans as Part of, or Separate from, the Environment	367
15.3.5 Assessment of Positive or Negative Aspects of Sustainability	368
15.4 Implications for Use of the Circular Economy and LCA	369
References	371
Subject Index	375
