

Table of Contents

1. The Biological Paradigm	3
1.1 Neural computation	3
1.1.1 Natural and artificial neural networks	3
1.1.2 Models of computation	5
1.1.3 Elements of a computing model	9
1.2 Networks of neurons	9
1.2.1 Structure of the neurons	9
1.2.2 Transmission of information	11
1.2.3 Information processing at the neurons and synapses	18
1.2.4 Storage of information – learning	20
1.2.5 The neuron – a self-organizing system	21
1.3 Artificial neural networks	23
1.3.1 Networks of primitive functions	23
1.3.2 Approximation of functions	24
1.3.3 Caveat	26
1.4 Historical and bibliographical remarks	26
2. Threshold Logic	29
2.1 Networks of functions	29
2.1.1 Feed-forward and recurrent networks	29
2.1.2 The computing units	31
2.2 Synthesis of Boolean functions	33
2.2.1 Conjunction, disjunction, negation	33
2.2.2 Geometric interpretation	34
2.2.3 Constructive synthesis	36
2.3 Equivalent networks	38
2.3.1 Weighted and unweighted networks	39
2.3.2 Absolute and relative inhibition	40
2.3.3 Binary signals and pulse coding	41
2.4 Recurrent networks	42
2.4.1 Stored state networks	42
2.4.2 Finite automata	43
2.4.3 Finite automata and recurrent networks	44
2.4.4 A first classification of neural networks	46

2.5	Harmonic analysis of logical functions	47
2.5.1	General expression	47
2.5.2	The Hadamard-Walsh transform	49
2.5.3	Applications of threshold logic	50
2.6	Historical and bibliographical remarks.....	52
3.	Weighted Networks – The Perceptron	55
3.1	Perceptrons and parallel processing	55
3.1.1	Perceptrons as weighted threshold elements	55
3.1.2	Computational limits of the perceptron model	57
3.2	Implementation of logical functions	60
3.2.1	Geometric interpretation	60
3.2.2	The XOR problem.....	62
3.3	Linearly separable functions	63
3.3.1	Linear separability.....	63
3.3.2	Duality of input space and weight space	64
3.3.3	The error function in weight space.....	65
3.3.4	General decision curves	65
3.4	Applications and biological analogy	66
3.4.1	Edge detection with perceptrons	66
3.4.2	The structure of the retina	68
3.4.3	Pyramidal networks and the neocognitron	69
3.4.4	The silicon retina.....	74
3.5	Historical and bibliographical remarks.....	75
4.	Perceptron Learning	77
4.1	Learning algorithms for neural networks	77
4.1.1	Classes of learning algorithms	78
4.1.2	Vector notation	79
4.1.3	Absolute linear separability	80
4.1.4	The error surface and the search method	81
4.2	Algorithmic learning	84
4.2.1	Geometric visualization	85
4.2.2	Convergence of the algorithm	87
4.2.3	Accelerating convergence	89
4.2.4	The pocket algorithm	90
4.2.5	Complexity of perceptron learning	91
4.3	Linear programming	92
4.3.1	Inner points of polytopes	92
4.3.2	Linear separability as linear optimization	94
4.3.3	Karmarkar's algorithm	95
4.4	Historical and bibliographical remarks.....	97

5. Unsupervised Learning and Clustering Algorithms	99
5.1 Competitive learning	99
5.1.1 Generalization of the perceptron problem	99
5.1.2 Unsupervised learning through competition	101
5.2 Convergence analysis	103
5.2.1 The one-dimensional case – energy function	103
5.2.2 Multidimensional case – the classical methods	106
5.2.3 Unsupervised learning as minimization problem	108
5.2.4 Stability of the solutions	110
5.3 Principal component analysis	112
5.3.1 Unsupervised reinforcement learning	112
5.3.2 Convergence of the learning algorithm	115
5.3.3 Multiple principal components	117
5.4 Some applications	117
5.4.1 Pattern recognition	118
5.4.2 Image compression	118
5.5 Historical and bibliographical remarks	120
6. One and Two Layered Networks	123
6.1 Structure and geometric visualization	123
6.1.1 Network architecture	123
6.1.2 The XOR problem revisited	124
6.1.3 Geometric visualization	127
6.2 Counting regions in input and weight space	129
6.2.1 Weight space regions for the XOR problem	129
6.2.2 Bipolar vectors	131
6.2.3 Projection of the solution regions	132
6.2.4 Geometric interpretation	135
6.3 Regions for two layered networks	138
6.3.1 Regions in weight space for the XOR problem	138
6.3.2 Number of regions in general	139
6.3.3 Consequences	142
6.3.4 The Vapnik–Chervonenkis dimension	142
6.3.5 The problem of local minima	145
6.4 Historical and bibliographical remarks	147
7. The Backpropagation Algorithm	149
7.1 Learning as gradient descent	149
7.1.1 Differentiable activation functions	149
7.1.2 Regions in input space	151
7.1.3 Local minima of the error function	152
7.2 General feed-forward networks	153
7.2.1 The learning problem	153
7.2.2 Derivatives of network functions	155
7.2.3 Steps of the backpropagation algorithm	159

7.2.4	Learning with backpropagation.....	161
7.3	The case of layered networks.....	162
7.3.1	Extended network.....	162
7.3.2	Steps of the algorithm.....	164
7.3.3	Backpropagation in matrix form.....	168
7.3.4	The locality of backpropagation.....	169
7.3.5	Error during training.....	171
7.4	Recurrent networks.....	171
7.4.1	Backpropagation through time.....	172
7.4.2	Hidden Markov Models.....	175
7.4.3	Variational problems.....	178
7.5	Historical and bibliographical remarks.....	180
8.	Fast Learning Algorithms.....	183
8.1	Introduction – classical backpropagation.....	183
8.1.1	Backpropagation with momentum.....	184
8.1.2	The fractal geometry of backpropagation.....	190
8.2	Some simple improvements to backpropagation.....	197
8.2.1	Initial weight selection.....	197
8.2.2	Clipped derivatives and offset term.....	199
8.2.3	Reducing the number of floating-point operations.....	200
8.2.4	Data decorrelation.....	202
8.3	Adaptive step algorithms.....	204
8.3.1	Silva and Almeida's algorithm.....	205
8.3.2	Delta-bar-delta.....	207
8.3.3	Rprop.....	208
8.3.4	The Dynamic Adaption algorithm.....	209
8.4	Second-order algorithms.....	210
8.4.1	Quickprop.....	211
8.4.2	QRprop.....	212
8.4.3	Second-order backpropagation.....	214
8.5	Relaxation methods.....	221
8.5.1	Weight and node perturbation.....	221
8.5.2	Symmetric and asymmetric relaxation.....	222
8.5.3	A final thought on taxonomy.....	223
8.6	Historical and bibliographical remarks.....	224
9.	Statistics and Neural Networks.....	227
9.1	Linear and nonlinear regression.....	227
9.1.1	The problem of good generalization.....	227
9.1.2	Linear regression.....	229
9.1.3	Nonlinear units.....	231
9.1.4	Computing the prediction error.....	233
9.1.5	The jackknife and cross-validation.....	236
9.1.6	Committees of networks.....	237

9.2	Multiple regression	240
9.2.1	Visualization of the solution regions	240
9.2.2	Linear equations and the pseudoinverse	242
9.2.3	The hidden layer	243
9.2.4	Computation of the pseudoinverse	244
9.3	Classification networks	245
9.3.1	An application: NETtalk	246
9.3.2	The Bayes property of classifier networks	247
9.3.3	Connectionist speech recognition	250
9.3.4	Autoregressive models for time series analysis	258
9.4	Historical and bibliographical remarks	259
10.	The Complexity of Learning	263
10.1	Network functions	263
10.1.1	Learning algorithms for multilayer networks	263
10.1.2	Hilbert's problem and computability	263
10.1.3	Kolmogorov's theorem	265
10.2	Function approximation	267
10.2.1	The one-dimensional case	267
10.2.2	The multidimensional case	269
10.3	Complexity of learning problems	271
10.3.1	Complexity classes	272
10.3.2	NP-complete learning problems	275
10.3.3	Complexity of learning with AND-OR networks	277
10.3.4	Simplifications of the network architecture	280
10.3.5	Learning with hints	281
10.4	Historical and bibliographical remarks	284
11.	Fuzzy Logic	287
11.1	Fuzzy sets and fuzzy logic	287
11.1.1	Imprecise data and imprecise rules	287
11.1.2	The fuzzy set concept	288
11.1.3	Geometric representation of fuzzy sets	290
11.1.4	Fuzzy set theory, logic operators, and geometry	294
11.1.5	Families of fuzzy operators	295
11.2	Fuzzy inferences	299
11.2.1	Inferences from imprecise data	299
11.2.2	Fuzzy numbers and inverse operation	300
11.3	Control with fuzzy logic	302
11.3.1	Fuzzy controllers	302
11.3.2	Fuzzy networks	303
11.3.3	Function approximation with fuzzy methods	305
11.3.4	The eye as a fuzzy system - color vision	306
11.4	Historical and bibliographical remarks	307

12. Associative Networks	309
12.1 Associative pattern recognition	309
12.1.1 Recurrent networks and types of associative memories	309
12.1.2 Structure of an associative memory	311
12.1.3 The eigenvector automaton	312
12.2 Associative learning	314
12.2.1 Hebbian learning – the correlation matrix	314
12.2.2 Geometric interpretation of Hebbian learning	317
12.2.3 Networks as dynamical systems – some experiments	318
12.2.4 Another visualization	322
12.3 The capacity problem	323
12.4 The pseudoinverse	324
12.4.1 Definition and properties of the pseudoinverse	325
12.4.2 Orthogonal projections	327
12.4.3 Holographic memories	330
12.4.4 Translation invariant pattern recognition	331
12.5 Historical and bibliographical remarks	333
13. The Hopfield Model	335
13.1 Synchronous and asynchronous networks	335
13.1.1 Recursive networks with stochastic dynamics	335
13.1.2 The bidirectional associative memory	336
13.1.3 The energy function	338
13.2 Definition of Hopfield networks	339
13.2.1 Asynchronous networks	339
13.2.2 Examples of the model	341
13.2.3 Isomorphism between the Hopfield and Ising models	346
13.3 Converge to stable states	347
13.3.1 Dynamics of Hopfield networks	347
13.3.2 Convergence proof	348
13.3.3 Hebbian learning	352
13.4 Equivalence of Hopfield and perceptron learning	354
13.4.1 Perceptron learning in Hopfield networks	354
13.4.2 Complexity of learning in Hopfield models	356
13.5 Parallel combinatorics	357
13.5.1 <i>NP</i> -complete problems and massive parallelism	357
13.5.2 The multiflop problem	357
13.5.3 The eight rooks problem	359
13.5.4 The eight queens problem	360
13.5.5 The traveling salesman	361
13.5.6 The limits of Hopfield networks	363
13.6 Implementation of Hopfield networks	365
13.6.1 Electrical implementation	365
13.6.2 Optical implementation	366
13.7 Historical and bibliographical remarks	368

14. Stochastic Networks	371
14.1 Variations of the Hopfield model	371
14.1.1 The continuous model	372
14.2 Stochastic systems	373
14.2.1 Simulated annealing	374
14.2.2 Stochastic neural networks	375
14.2.3 Markov chains	376
14.2.4 The Boltzmann distribution	379
14.2.5 Physical meaning of the Boltzmann distribution	382
14.3 Learning algorithms and applications	383
14.3.1 Boltzmann learning	383
14.3.2 Combinatorial optimization	385
14.4 Historical and bibliographical remarks	386
15. Kohonen Networks	389
15.1 Self-organization	389
15.1.1 Charting input space	389
15.1.2 Topology preserving maps in the brain	390
15.2 Kohonen's model	393
15.2.1 Learning algorithm	393
15.2.2 Mapping high-dimensional spaces	397
15.3 Analysis of convergence	399
15.3.1 Potential function – the one-dimensional case	399
15.3.2 The two-dimensional case	401
15.3.3 Effect of a unit's neighborhood	402
15.3.4 Metastable states	403
15.3.5 What dimension for Kohonen networks?	405
15.4 Applications	406
15.4.1 Approximation of functions	406
15.4.2 Inverse kinematics	407
15.5 Historical and bibliographical remarks	409
16. Modular Neural Networks	411
16.1 Constructive algorithms for modular networks	411
16.1.1 Cascade correlation	412
16.1.2 Optimal modules and mixtures of experts	413
16.2 Hybrid networks	414
16.2.1 The ART architectures	414
16.2.2 Maximum entropy	417
16.2.3 Counterpropagation networks	418
16.2.4 Spline networks	420
16.2.5 Radial basis functions	422
16.3 Historical and bibliographical remarks	424

17. Genetic Algorithms	427
17.1 Coding and operators	427
17.1.1 Optimization problems	427
17.1.2 Methods of stochastic optimization	428
17.1.3 Genetic coding	431
17.1.4 Information exchange with genetic operators	432
17.2 Properties of genetic algorithms	433
17.2.1 Convergence analysis	433
17.2.2 Deceptive problems	437
17.2.3 Genetic drift	438
17.2.4 Gradient methods versus genetic algorithms	440
17.3 Neural networks and genetic algorithms	441
17.3.1 The problem of symmetries	441
17.3.2 A numerical experiment	443
17.3.3 Other applications of GAs	444
17.4 Historical and bibliographical remarks	446
18. Hardware for Neural Networks	449
18.1 Taxonomy of neural hardware	449
18.1.1 Performance requirements	449
18.1.2 Types of neurocomputers	451
18.2 Analog neural networks	452
18.2.1 Coding	453
18.2.2 VLSI transistor circuits	454
18.2.3 Transistors with stored charge	456
18.2.4 CCD components	457
18.3 Digital networks	459
18.3.1 Numerical representation of weights and signals	459
18.3.2 Vector and signal processors	460
18.3.3 Systolic arrays	461
18.3.4 One-dimensional structures	463
18.4 Innovative computer architectures	466
18.4.1 VLSI microprocessors for neural networks	466
18.4.2 Optical computers	469
18.4.3 Pulse coded networks	472
18.5 Historical and bibliographical remarks	474
