

I. Table of contents

I.	Table of contents	2
II.	Abbreviations Table	7
1.	Introduction.....	9
1.1.	Aim.....	9
1.2.	What is Schizophrenia?.....	10
1.3.	Schizophrenia, a global health burden without adequate treatment?.....	12
1.4.	Neurochemical models of schizophrenia	14
1.4.1.	The dopaminergic hypothesis of schizophrenia	14
1.4.2.	The serotonergic hypothesis of schizophrenia	15
1.4.3.	The glutamatergic hypothesis of schizophrenia and the role of GABA	16
1.4.4.	Synthesis of three intercompatible neurochemical models	17
1.5.	Neurodevelopmental models of schizophrenia	17
1.5.1.	Genetics of schizophrenia	17
1.5.2.	Environmental risk factors for schizophrenia	19
1.5.3.	Neuroanatomy and functional dysconnectivity in schizophrenia	20
1.5.4.	The neurodevelopmental hypothesis of schizophrenia	22
1.6.	Cognition in schizophrenia	23
1.6.1.	Cognitive Impairment in schizophrenia	23
1.6.2.	Cognitive models of schizophrenia.....	25
1.6.3.	Top-down models of cognitive impairment in schizophrenia.....	26
1.6.4.	Alternative and Bottom-up models of cognitive impairment in schizophrenia	29
1.7.	Sensory processing in schizophrenia	30
1.7.1.	Overview and History	30
1.8.	Visual Processing in healthy subjects.....	31
1.8.1.	The Visual System: Magno- and Parvocellular Pathways	31
1.8.2.	Visual Evoked Potentials	33
1.9.	Visual Processing in schizophrenia	34
1.9.1.	Visual perception in schizophrenia	34
1.9.2.	Prethalamic visual system anomalies in schizophrenia	35

1.9.3. A magnocellular deficit in schizophrenia..... 35

1.9.4. M- and P-pathway interaction: M- on P-priming dysfunction in schizophrenia 38

1.9.5. Lower order effects of visual pathway dysfunction in schizophrenia 40

1.9.6. Higher order effects of visual pathway dysfunction in schizophrenia 41

1.9.7. Possible causes and mechanisms of visual pathway dysfunction..... 42

1.10. Association between sensory processing and cognitive impairment in schizophrenia 44

1.11. Hypotheses..... 49

1.11.1. Hypothesis 1: *Neuropsychological Performance* is impaired in schizophrenia..... 49

1.11.2. Hypothesis 2: There is a differential activation of visual pathways by biased stimuli..... 49

1.11.3. Hypothesis 3: There is a magnocellular impairment in schizophrenia 50

1.11.4. Hypothesis 4: There is an association between VEP parameters and *NPS Performance* 50

1.12. Exploratory analyses 50

1.12.1. Exploratory Analysis 1: Association between further variables and *NPS Performance* 50

1.12.2. Exploratory Analysis 2: Association between further variables and VEP parameters 51

2. Methods 52

2.1. Participants 52

2.2. Neuropsychological Testing 55

2.3. EEG Procedure 57

2.4. Statistical analysis 59

2.4.1. Power analysis..... 59

2.4.2. Data collection, management and analysis 60

2.4.3. Hypothesis 1A: Standardization and factor analysis of *NPS Performance* 60

2.4.4. Hypothesis 1B: Group differences for *NPS Performance*..... 60

2.4.5. Exploratory Analysis 1: Association between further variables and *NPS performance*..... 60

2.4.6. Hypothesis 2: Analysis of the effect of stimulus condition on VEP parameters 60

2.4.7. Hypothesis 3: Group differences for VEP parameters 61

2.4.8. Exploratory Analysis 2: Association between further variables and VEP parameters 61

2.4.9. Hypothesis 4: Analysis of VEP parameter – *NPS performance* correlations..... 61

2.4.10. Logistic regression analysis for the classification of patients into high and low *NPS Performance* by VEP parameters 62

3. Results.....	63
3.1. Hypothesis 1A: <i>NPS Performance</i> , Principal component analysis (PCA) of cognitive domains in SZ and HC	63
3.2. Hypothesis 1B: <i>NPS Performance</i> , Group differences between SZ _M and HC.....	63
3.3. Exploratory Analysis 1: Association between further variables and <i>NPS Performance</i>	66
3.4. Visual Evoked Potentials: Stimulus and group differences	66
3.4.1. Source Analysis.....	66
3.4.2. Grand Averages and missing data	67
3.4.3. Hypothesis 2: VEP Modulation by differential M-/P-activation	67
3.4.4. Hypothesis 3: VEP Parameter group differences between HC and SZ _M , Mixed ANOVA.....	69
3.5. Exploratory Analysis 2: Association between further variables and VEP parameters	70
3.5.1. Association between handedness and VEP parameters: Non-parametric Testing and follow up ANOVAs	71
3.5.2. Association between age, premorbid verbal IQ and VEP parameters: Bootstrapped Pearson's correlations.....	72
3.6. Hypothesis 4: VEP Parameters and <i>NPS Performance</i> , Analysis of their linear relationship using PCA.	75
3.7. Hypothesis 4: VEP Parameters and <i>NPS Performance</i> correlations.....	77
3.7.1. N80 latency and <i>NPS performance</i> in SZ (n=44), driven by PCA	77
3.7.2. N80 latency and <i>NPS performance</i> in HC (n=34), exploratory	79
3.7.3. P1 latency and <i>NPS performance</i> , exploratory.....	80
3.7.4. N80 and P1 latency outlier analysis and exclusion	80
3.7.5. N80 amplitude and <i>NPS performance</i> , exploratory	81
3.7.6. P1 amplitude and <i>NPS performance</i> , exploratory	82
3.8. Logistic regression analysis of predictive power of N80 latency for <i>NPS performance</i> in SZ (n=44)..	82
4. Discussion.....	84
4.1. Summary of findings.....	84
4.2. <i>NPS Performance</i> in schizophrenia and healthy controls	84
4.2.1. Hypothesis 1: A general cognitive impairment in schizophrenia	84
4.2.2. Exploratory Analysis 1: Associations between further variables and <i>NPS Performance</i>	84
4.2.3. Conclusion on <i>Neuropsychological Performance</i>	85

4.2.4.	Top-Down or Bottom-Up Deficits?.....	85
4.3.	Visual Evoked Potentials: Sources, Grand Averages and Modulation by M- and P-biased stimuli.....	86
4.3.1.	Source Analysis and hemispheric asymmetry of the P1 potential	86
4.3.2.	Hypothesis 2: Modulation of amplitudes by M- and P-biased stimuli. Decreased P1 modulation in schizophrenia?.....	87
4.3.3.	Hypothesis 2E: Effect of Flicker on amplitudes and latencies.....	88
4.4.	Hypothesis 3: VEP Parameter group differences. Is there a magno- or parvocellular deficit in schizophrenia?.....	88
4.4.1.	Significance of the current findings on M- and P-Pathways in light of previous literature.....	89
4.4.2.	Evidence against isolated M-pathway impairment in schizophrenia	90
4.4.3.	Conclusion on Magnocellular impairment in schizophrenia.....	93
4.5.	Hypothesis 4: Association between early visual processing and <i>NPS Performance</i> in schizophrenia	93
4.5.1.	Summary of results: A heightened association of VEP parameters and <i>NPS Performance</i> in schizophrenia.....	93
4.5.2.	Hypothesis 4A: VEP Latencies and their association with <i>NPS performance</i> in schizophrenia..	94
4.5.3.	Hypothesis 4B: VEP Amplitudes and their association with <i>NPS performance</i> in schizophrenia	97
4.5.4.	Heightened influence of visual processing on cognition in schizophrenia?.....	97
4.6.	N80 latency as a potential biomarker for <i>NPS Performance</i> in schizophrenia?	99
4.7.	Association of early visual processing and <i>NPS Performance</i> in healthy controls	99
4.8.	Exploratory Analysis 2: Association between further variables and VEP Parameters	100
4.8.1.	Association between diagnosis and VEP parameters.....	100
4.8.2.	Association between antipsychotic dose and VEP parameters	101
4.8.3.	Association between handedness and VEP parameters	101
4.8.4.	Association between premorbid verbal IQ and VEP parameters.....	101
4.8.5.	Association between age and VEP parameters	102
4.9.	Limitations and Open Questions	104
4.9.1.	Sample size	104
4.9.2.	Missing VEP data.....	104
4.9.3.	Different patient groups in the analysis	104

4.9.4. A non-representative high functioning, high IQ and high *NPS Performance* patient sample : The ‘*Matching Fallacy*’104

4.9.5. Multiple comparisons108

4.9.6. No measure of symptom severity108

4.9.7. No differentiation between early and adult-onset schizophrenia108

4.9.8. Incomparable methods108

4.9.9. Fundamental methodological issues.....109

4.9.10. Early visual processing: Too narrow an approach?109

4.9.11. What about the eye and retina?109

4.9.12. What about the koniocellular pathway?.....110

4.10. Conclusion111

4.10.1. Cognition’s dependence on sensory processing: ‘Sensory Hijacking’ in Schizophrenia?111

4.10.2. Future directions113

4.11. Further considerations113

4.11.1. Vision as a key factor in the development of schizophrenia?113

4.11.2. Predictive Processing: The solution to everything?.....115

4.11.3. The future of schizophrenia119

5. Summary120

6. Zusammenfassung122

7. References List.....124

8. Personal contribution to data acquisition, assessment, and personal publications.....155

9. Appendix156
