

Contents

0	Notation, Terminology, and Some Functional Analysis	1
1	Basics in Optimization	11
2	Continuity of Set-Valued Mappings	23
3	Lipschitz Continuity of Polyhedral Mappings	29
4	Metric Regularity	37
5	Lyusternik–Graves Theorem	47
6	Mappings with Convex Graphs	53
7	Derivative Criteria for Metric Regularity	61
8	Strong Regularity	77
9	Variational Inequalities over Polyhedral Sets	87
10	Nonsmooth Inverse Function Theorems	97
11	Lipschitz Stability in Optimization	103
12	Strong Subregularity	113
13	Continuous Selections	125
14	Radius of Regularity	139
15	Newton Method for Generalized Equations	147
16	The Constrained Linear-Quadratic Optimal Control Problem	157

17 Regularity in Nonlinear Control 167

18 Discrete Approximations 177

19 Optimal Feedback Control 189

20 Model Predictive Control 197
