Editor biographies	xi
List of contributors	xiv
1 Introduction to engineering nanostructured materials for energy and environmental applications <i>R V Mangalaraja and R Udayabhaskar</i>	1-1
Part I Energy	
2 Engineering 2D chalcogenides for energy and environmental remediation <i>A Arulraj, N Thachnatharen, C Rajkumar and R V Mangalaraja</i>	2-1
2.1 Introduction	2-1
2.2 Synthesis approaches for chalcogenides	2-3
2.3 Applications of chalcogenides	2-5
2.3.1 Energy	2-5
2.3.2 Environmental remedial applications	2-12
2.4 Summary	2-19
Acknowledgement	2-20
References	2-20
3 Two-dimensional nanolayers for wearable supercapacitors <i>Neetu Talreja, Divya Chauhan and R V Mangalaraja</i>	3-1
3.1 Introduction	3-1
3.2 2D nanolayers and their properties	3-3
3.3 2D nanolayer based electrodes for supercapacitor applications	3-4
3.3.1 Graphene based electrode materials for supercapacitors	3-5
3.3.2 Transition metal dichalcogenides (TMDs)	3-7
3.3.3 MXene	3-8
3.3.4 Other 2D nanolayers	3-10
3.4 Nanolayer based flexible wearable devices	3-10
3.5 Conclusion and future prospects	3-15
Acknowledgment	3-15
References	3-15

4 Micro-mesoporous carbon-based nanostructured materials for flexible supercapacitors 4-1

Mohammad Ashfaq, Divya Chauhan and R V Mangalaraja

4.1	Introduction	4-1
4.2	Synthesis of micro- and mesoporous carbon-based materials	4-4
4.2.1	Carbonization and activation process	4-4
4.2.2	Sulfonation process	4-6
4.2.3	Halogenation process	4-7
4.3	Graphene: a revolution in energy storage	4-7
4.3.1	Graphene and graphene composites in supercapacitors	4-8
4.4	Other carbon-based materials in supercapacitors	4-9
4.4.1	CNTs and CNFs	4-9
4.4.2	Carbon aerogels/composites	4-10
4.5	Flexible carbon-based material energy storage devices	4-12
4.6	Conclusion and future prospects	4-14
	Acknowledgment	4-14
	References	4-15

5 Platinum based alloy nanostructure electrocatalyst for oxygen reduction reaction in polymer electrolyte membrane fuel cells 5-1

Moorthi Lokanathan, Bhalchandra Kakade and R V Mangalaraja

5.1	Introduction	5-1
5.2	Polymer electrolyte membrane fuel cells (PEMFCs)	5-2
5.2.1	The working principle of PEMFCs	5-2
5.2.2	Challenges of PEMFCs	5-2
5.2.3	ORR mechanisms on Pt and Pt based alloy surfaces	5-3
5.3	Electrochemical measurement and activity calculation	5-3
5.3.1	Preparation of the catalyst ink and a modified working electrode	5-3
5.3.2	Cyclic voltammetry (CV)	5-4
5.3.3	Rotating disc electrode (RDE) study	5-5
5.3.4	Rotating ring disc electrode (RRDE) study	5-6
5.3.5	Durability or stability test	5-7
5.4	A platinum based nanostructure electrocatalyst for ORR	5-7
5.4.1	Pt monometallic nanostructures	5-7
5.4.2	Pt based binary alloy nanostructures	5-10
5.4.3	Pt based ternary alloy nanostructures	5-14
5.5	Summary	5-18

Acknowledgements	5-18
References	5-19
6 Ultrathin, flexible hybrid transition metal oxide nanostructures for renewable energy storage devices	6-1
<i>B Gnana Sundara Raj, S Anandan and R V Mangalaraja</i>	
6.1 Introduction	6-1
6.2 Fundamentals of nanostructured materials (NMs) for energy saving devices	6-4
6.3 Materials with supercapacitor electrodes	6-6
6.3.1 Supercapacitors based on hybrid transition metal oxides (HTMOs)	6-7
6.3.2 Supercapacitors based on graphene–hybrid transition metal oxides (G–HTMOs)	6-12
6.4 Conclusions and future perspectives	6-17
Acknowledgements	6-18
References	6-18
7 Graphene based nanocomposites for energy conversion: the oxygen reduction, oxygen evolution, and hydrogen evolution reactions	7-1
<i>Periyasamy Gnanaprakasam, Periyasamy Sundaresan, Muthukumar Abinaya, R V Mangalaraja, Ruey Shin Juang and Baskaralingam Vaseeharan</i>	
7.1 Introduction	7-1
7.2 Synthesis of graphene	7-2
7.2.1 Top-down approaches	7-2
7.2.2 Bottom-up approaches	7-5
7.3 Heteroatom doped graphene	7-7
7.3.1 Synthesis of N-doped graphene	7-8
7.3.2 Synthesis of B-doped graphene	7-10
7.3.3 Synthesis of F-doped graphene	7-10
7.4 Energy conversion applications of graphene composites	7-12
7.4.1 Oxygen reduction reaction	7-12
7.4.2 Oxygen evolution reaction	7-14
7.4.3 Hydrogen evolution reaction	7-16
7.5 Conclusion	7-18
Acknowledgements	7-19
References	7-19

8 Materials science of advanced carbon nanomaterials for photovoltaic and photothermal devices **8-1**

Thangaraj Pandiyarajan, R V Mangalaraja Balasubramanian Karthikeyan and M A Gracia-Pinilla

8.1	Introduction	8-1
8.2	Classifications of carbon allotropes	8-3
8.2.1	Three-dimensional materials	8-3
8.2.2	Two-dimensional materials	8-4
8.2.3	One-dimensional materials	8-4
8.2.4	Zero-dimensional materials	8-5
8.3	Graphene synthesis route	8-5
8.3.1	Exfoliation	8-5
8.3.2	Bottom-up approaches	8-13
8.4	Photovoltaic devices	8-18
8.4.1	Fundamental processes and important parameters	8-18
8.4.2	Types of solar cells	8-20
8.4.3	Graphene based photovoltaic cells	8-21
8.5	Photothermal therapy	8-42
8.5.1	Graphene based PTT	8-44
8.5.2	Chemo/photothermal synergistic therapy	8-49
8.6	Concluding remarks and outlook	8-51
	References	8-52

Part II Environmental Remediation

9 Metal doped iron (III) oxide nanomaterials for wastewater treatment **9-1**

N Jayaprakash, E Sundaravadivel, S Rajalakshmi and R Suresh

9.1	Introduction	9-1
9.2	The synthesis of metal doped Fe ₂ O ₃ nanostructures	9-4
9.3	Properties of metal doped Fe ₂ O ₃ nanostructures	9-6
9.4	Applications of doped Fe ₂ O ₃ in environmental remediation	9-7
9.4.1	Adsorption	9-7
9.4.2	Catalysis	9-9
9.4.3	Disinfection	9-17
9.5	Summary	9-18
	References	9-18

10	Nanoferrites for green magnetic refrigeration	10-1
	<i>T Prabhakaran, F Béron, A M G Carvalho, R V Mangalaraja and J C Denardin</i>	
10.1	Introduction	10-1
10.1.1	Conventional refrigerators (CRs) and the need for solid-state refrigerants	10-3
10.1.2	Magnetic refrigeration	10-4
10.1.3	Estimation of the MCE by direct and indirect methods	10-7
10.1.4	First-order and second-order phase transition materials	10-8
10.2	The performance of ferrites as magnetic refrigerants	10-10
10.2.1	The MCE of ZnFe_2O_4 nanoparticles	10-11
10.2.2	Ferrite nanocomposites	10-13
10.2.3	Comparison of the MCE with previous reports	10-17
10.3	Perspectives and summary	10-19
	Acknowledgements	10-19
	References	10-20
11	Degradation of antibiotic pollutants and green hydrogen production from wastewater through a photocatalytic reaction	11-1
	<i>Saeed Farhang Sahlevani, Héctor Valdés Morales and R V Mangalaraja</i>	
11.1	Introduction	11-1
11.2	Fundamentals of photocatalytics	11-3
11.3	Photocatalytic degradation of antibiotic wastewater	11-4
11.3.1	ZnO	11-5
11.3.2	TiO ₂	11-6
11.3.3	Hybrid nanomaterials	11-7
11.4	Conclusions and outlook	11-13
	References	11-13
12	Fluorescent nanoclusters used as a probe for sensing of toxic chemicals and biomolecules	12-1
	<i>Krishnamoorthy Shanmugaraj, R V Mangalaraja, Radhamanohar Aepuru, Cristian H Campos, Malaichamy Ilanchelian and Mohamad Hafiz Bin Mamat</i>	
12.1	Introduction	12-1
12.2	Synthesis methods of nanoclusters	12-3

12.3 Applications of fluorescent metal nanoclusters	12-4
12.3.1 Detection of cations and anions	12-5
12.3.2 Detection of small molecules	12-10
12.3.3 Pesticide detection	12-13
12.3.4 Nucleic-acid detection	12-14
12.3.5 Protein detection	12-16
12.4 Conclusions and trends	12-17
Acknowledgements	12-18
References	12-18
