

Contents

Chapter 1. Introduction	1
1.1. Future work on the closure of the double ramification cycle	3
1.2. Special case of 2-gons	3
1.3. Some of the complications arising in the general case	4
1.4. Acknowledgements	6
Part 1. Fine moduli of enriched structures	7
Chapter 2. Preliminaries	9
2.1. Notation for pullbacks	9
2.2. Graphs	9
2.3. Fitting ideals	10
2.4. Prestable curves and their moduli	11
2.5. Boundaries and labelled graphs of curves	12
2.6. Controlled curves and charts	13
Chapter 3. Defining enriched structures	17
3.1. Enriched structures on controlled curves	17
3.2. Pulling back enriched structures	20
3.3. Enriched structures for general C/S	23
Chapter 4. Representability of the functor of enriched structures	27
Chapter 5. Enriched structures over separably closed fields	33
5.1. The structure of pullbacks of certain ideal sheaves to fibres	34
5.2. Comparing the two notions of enriched structure	37
Chapter 6. The stack of enriched structures and universal Néron models	39
6.1. Geometric regularity of the stack of enriched structures	40
6.2. $\mathbb{E}$ is an isomorphism	43
Chapter 7. Relation to the constructions of Mainò	45
7.1. Over reduced base schemes	46
7.2. Blowing up the moduli space of curves	49
Part 2. Compactifying the stack of enriched structures	51
Chapter 8. Defining compactified enriched structures	53
8.1. From relative components to hemispheres	54
8.2. Enrichment data	54
8.3. Local structure of pullbacks of ideal sheaves again	55

8.4.	Compatibility of enrichment data	59
8.5.	Pulling back compactified enriched structures	63
8.6.	Compactified enriched structures for general C/S , and properties	64
Chapter 9. Properness of the stack of compactified enriched structures		67
Chapter 10. Comparison to enriched structures		73
10.1.	When all the labels vanish	74
10.2.	Integral base schemes	80
10.3.	Deducing the general case	81
Appendix A. Defining sheaves on a base for a Grothendieck topology		83
Bibliography		87
Index of definitions and examples		89
Index of notation		91
