Preface	xvii
Acknowledgments	xix
Chapter 1 Introduction	1
1.1 Background	1
1.2 Fluid Dynamics	1
1.3 Fluid Flow Analysis	1
1.4 Fluid Turbulence	2
1.5 Fluvial Hydraulics	2
1.6 Sediment Transport	2
1.7 Scope of the Book	3
1.8 Highlights of the Book	4
1.9 Book Content and Its Usage	4
1.10 Summary	5
Chapter 2 Fundamental Fluid Properties and Definitions	7
2.1 Introduction	7
2.2 Continuum Mechanics	7
2.3 Fluid Properties	8
2.4 Perfect and Real Fluids	8
2.5 Viscosity	9
2.6 Dimensionless Numbers	10
2.7 Statistical Analysis	12
2.7.1 Probability	14
2.8 Concepts on Laminar and Turbulent Flows	16
2.9 Hydraulics and Hydrodynamics	17
2.10 Open Channel Flow	18
2.11 Sediment Transport	18
2.12 Summary	20
2.13 Exercise Problems	20
Chapter 3 Elementary Fluid Kinematics and Dynamics	21
3.1 Introduction	21
3.2 General Descriptions of Fluid Motion	21
3.2.1 Lagrangian Approach	22
3.2.2 Eulerian Approach	22
3.3 Streamlines and Pathlines	23
3.4 Vorticity	26
3.4.1 Relation between Vorticity and Angular Velocity	27
3.5 Material Derivative and Acceleration	29
3.6 Equation of Continuity (Conservation of Mass)	30

3.7	Equations of Motion (Conservation of Momentum).....	32
3.8	Bernoulli's Equation (Conservation of Energy).....	36
3.9	Applications of the Bernoulli's Equation.....	38
3.9.1	Bernoulli's Equation with Head Loss.....	43
3.9.2	Trajectory of a Free Jet	43
3.9.3	Pitot Tube or Stagnation Tube	45
3.9.4	Venturi Meter.....	47
3.10	Potential Flow	50
3.10.1	Laplace Equation in Different Coordinate Systems	50
3.11	Summary.....	52
3.12	Exercise Problems	53
Chapter 4	Basic Concepts of Viscous Fluid Flows.....	55
4.1	Introduction	55
4.2	Flow through a Pipe (Hagen–Poiseuille Flow).....	55
4.3	Similarity Principles.....	56
4.3.1	Dimensional Analysis	57
4.3.2	Derivations of Some Dimensionless Numbers	58
4.4	Drag and Lift Forces	60
4.4.1	Drag and Lift Analysis.....	61
4.5	Viscous Boundary Layers	63
4.5.1	Estimation of Boundary Layer Thickness.....	64
4.5.2	Flow Separation and Vortex Formation	66
4.5.2.1	Separation of Flow.....	67
4.6	Basic Equations of Laminar Flow (Navier–Stokes Equations).....	68
4.7	Vorticity Transport Equations	71
4.8	Some Exact Solutions of Navier–Stokes Equations.....	72
4.8.1	Parallel Flow through a Straight Channel.....	72
4.8.2	Couette Flow.....	74
4.8.3	Generalized Couette Flow	75
4.8.4	Steady Flow Through Pipes	79
4.8.4.1	Maximum and Average Velocities.....	80
4.8.5	Flow Between Two Co-Axial Cylinders	81
4.8.6	Flow Between Two Concentric Rotating Cylinders	82
4.9	Unsteady Motion of a Flat Plate (Stokes's First Problem)	84
4.9.1	Unsteady Flow due to an Oscillating Flat Plate (Stokes's Second Problem)	88
4.10	Stagnation Point Flows.....	89
4.11	Low Reynolds Number Flows (High Viscosity).....	92
4.11.1	Creeping Flows	93
4.11.2	Stokes's Law and Applications.....	94
4.11.3	Hydrodynamic Lubrication	95
4.12	Summary.....	96
4.13	Exercise Problems	97
Chapter 5	Boundary Layer Theory	99
5.1	Introduction	99
5.2	Boundary Layer Equations and Approximations	99

5.2.1	Prandtl's Boundary Layer Equations.....	102
5.2.2	Some Physical Properties of Boundary Layers	103
5.2.2.1	Skin-Friction Coefficient	104
5.2.2.2	Separation Point.....	104
5.3	Boundary Layer Along a Flat Plate	107
5.3.1	Shear Stress and Boundary Layer Thickness.....	111
5.4	Boundary Layer with Pressure Gradient on a Surface	113
5.5	Momentum Integral Theorem for the Boundary Layer Flow	116
5.5.1	The von-Karman Integral Relations.....	116
5.6	Applications of the Momentum Integral Equation to Boundary Layers.....	121
5.6.1	von-Karman – Pohlhausen Method for Non-Zero Pressure Gradient	121
5.6.2	For Zero Pressure Gradient.....	125
5.7	Boundary Layer for Entry Flow in a Duct.....	127
5.8	Summary	128
5.9	Exercise Problems	128
Chapter 6	Turbulent Flow Analysis	131
6.1	Introduction	131
6.2	Laminar and Turbulent Flows	131
6.2.1	Transition from Laminar to Turbulent Flow	133
6.2.2	Intermittent Flows.....	135
6.3	Transition in Boundary Layer Over Solid Body.....	136
6.4	Principles of Stability Theory	137
6.4.1	Method of Small Disturbances.....	137
6.5	Fundamentals of Turbulent Flows	140
6.5.1	Time-Averaged Motion and Fluctuations.....	142
6.5.2	Reynolds Equations and Reynolds Stresses	145
6.5.3	Boundary Conditions for Velocity Components.....	147
6.5.4	Turbulent Boundary Layer Equations	147
6.6	Classical Turbulence Modeling Using Semi-Empirical Theories.....	148
6.6.1	Boussinesq's Eddy Viscosity Hypothesis	149
6.6.2	Prandtl's Mixing Length Hypothesis	150
6.6.3	von-Karman Similarity Hypothesis	152
6.7	Velocity Distributions Over the Flat Surface.....	153
6.7.1	Linear Law in the Viscous Sub-Layer in the Inner Layer.....	155
6.7.2	Velocity Distribution from Prandtl's Mixing Length Theory	156
6.7.3	Velocity-Distribution from von-Karman's Hypothesis.....	160
6.7.4	Velocity Distribution from Cole's Law of Wake Strength for the Whole Layer.....	160
6.7.5	Velocity Distribution Due to van Driest's Damping Concept to the Wall ...	166
6.7.6	Velocity Distributions over Rough Surface	171
6.7.7	Universal Velocity Distribution Laws Through Pipes.....	175
6.8	Universal Resistance Law	179
6.8.1	Universal Resistance Law through Smooth Pipes at Large Reynolds Numbers.....	180
6.8.2	Universal Resistance Law for Rough Pipes at Large Reynolds Numbers...	182
6.9	Derivations of Energy Equations.....	183

6.9.1	Kinetic Energy Equation for Laminar Flow	183
6.9.2	Kinetic Energy Equation for Fluctuating Flow	187
6.9.3	Kinetic Energy Equation for the Mean Flow	191
6.9.4	Equations for Turbulent Kinetic Energy in Cartesian Coordinate System ...	194
6.9.5	Turbulent Energy Equation for Boundary Layer Flows	196
6.10	Mean Flows and Turbulence Characteristics	199
6.10.1	Mean Flows	200
6.10.2	Turbulence Intensities and Reynolds Shear Stresses	202
6.10.2.1	Turbulence Intensities	202
6.10.2.2	Reynolds Shear Stresses	205
6.10.2.3	Correlation Coefficients	206
6.10.3	Turbulence Bursting Process	207
6.10.4	Quadrant Threshold Technique	208
6.10.5	Theoretical Model for Turbulence Bursting	210
6.10.6	Distribution of Eddy Viscosity	211
6.10.7	Mixing Length	213
6.10.8	Turbulent Kinetic Energy (TKE)	215
6.10.9	Coefficients of Skewness and Kurtosis	216
6.10.10	Turbulent Kinetic Energy Flux	217
6.10.11	Turbulent Kinetic Energy Budget	218
6.10.12	Turbulent Kinetic Energy Production	218
6.10.13	Kinetic Energy Dissipation	219
6.11	Isotropic Turbulence	220
6.11.1	Spectral Analysis	222
6.11.2	Turbulent Integral Length Scale and Energy Cascade	226
6.11.3	Taylor's Length Scale	227
6.11.3.1	Kolmogorov Length Scale	227
6.11.4	Kolmogorov Hypothesis	228
6.12	Anisotropy of Turbulence	230
6.13	Turbulent Flow Analysis – Applications	232
6.14	Summary	233
6.15	Exercise Problems	233
Chapter 7	Turbulent Flow Measurements and Instrumentations	235
7.1	Introduction	235
7.2	Instrumentations for Laboratory Flow Measurements	235
7.2.1	OTT Laboratory Propeller-Type Current Meter	236
7.2.2	Hot-Wire Anemometer	236
7.2.3	Laser Doppler Anemometer (LDA)	237
7.2.4	Acoustic Doppler Velocimeter (ADV)	237
7.2.5	Particle Image Velocimetry	239
7.2.6	Flow Visualization Using Digital Imaging	240
7.2.7	Acoustic Bed Profiler (Ultrasonic Ranging System)	241
7.3	Field Velocity Measuring Instruments	242
7.3.1	Electromagnetic Current Meters	242
7.3.2	Inter-Ocean Current Meter (S4)	243
7.3.3	Acoustic Doppler Current Profiler	244

7.4	Hydraulic Flumes	245
7.4.1	Re-Circulating Flumes	245
7.4.1.1	Flume for Digital Imaging	246
7.4.2	Open Ended Hydraulic Flumes	248
7.5	Flume Experimental Setup: Case Studies	250
7.5.1	Flow Over Triangular-Shaped Waveform Structures	250
7.5.2	Flow Around Different Shapes of Piers	252
7.6	Turbulence in Natural Rivers	257
7.6.1	Mean Velocity and Turbulence Characteristics in Natural Rivers	258
7.7	Summary	263
7.8	Exercise Problems	264
Chapter 8	Sediment Transport Phenomena	265
8.1	Introduction	265
8.2	Properties of Individual Sediment Particles	265
8.2.1	Particle Size	265
8.2.2	Particle Shape	267
8.2.3	Terminal Fall Velocity of Sediment Particle	268
8.3	Motion with Linear Resistance	271
8.3.1	Motion with Nonlinear Resistance	271
8.3.2	Terminal Velocity	273
8.4	Effect of Particles on Viscosity	277
8.4.1	Stable Suspension for Spherical Particles	279
8.4.2	Unstable Suspension	279
8.4.3	Suspension of Non-Spherical Particles	279
8.5	Bulk Properties of Sediments	280
8.5.1	Grain-Size Distributions of Sediments	280
8.5.1.1	Characteristics of Frequency Curves	281
8.5.2	Grain Size Distributions (Log-Normal, Hyperbolic and Laplace)	286
8.5.2.1	Normal Distribution	288
8.5.2.2	Hyperbolic Distribution	288
8.5.2.3	Skew Laplace Distribution	289
8.5.3	Porosity and Specific Weight	290
8.5.4	Angle of Repose	291
8.6	Incipient Motion of Sediment Particles	291
8.6.1	Competent Velocity	292
8.6.1.1	Critical Velocity Equations	292
8.6.2	Lift Force Concept	298
8.6.3	Critical Tractive Force	300
8.6.3.1	Average Shear Stress	300
8.6.4	Critical Shear Stress	301
8.7	Semi-Empirical Equations for Incipient Motion	303
8.7.1	Shields' Analysis (1936)	304
8.7.2	White's Analysis (1940)	307
8.7.3	Kurihara's Analysis (1948)	309
8.7.4	Iwagaki's Analysis (1956)	310
8.7.5	Wiberg and Smith's Analysis (1987)	312

8.7.6	Ling's Analysis (1995).....	315
8.7.7	Zanke's Analysis (2003).....	318
8.7.8	Further Developments.....	320
8.8	Shear Stress for Sloping of River Bed and Bank.....	330
8.9	River Bank Erosion.....	336
8.10	Probabilistic Concepts of Incipient Sediment Motion.....	339
8.11	Threshold of Incipient Motion Due to Turbulent Bursting.....	352
8.12	Threshold Motion of Mixed Grain Sizes.....	354
8.13	Summary.....	359
8.14	Exercise Problems.....	360
Chapter 9	Bed Load Transport, Suspension, and Total Load.....	361
9.1	Introduction.....	361
9.2	Modes of Sediment Movement.....	361
9.3	Bed Load Transport Phenomena.....	362
9.3.1	Basic Definitions.....	362
9.3.2	Transportation of Bed Load.....	362
9.4	Bed Load Transport Equations.....	363
9.4.1	Shear Stress Concept for Bed Load Equations.....	363
9.4.2	Bed Load Equations Based on Particle Velocity.....	376
9.4.3	Bed Load Equation Based on Concept of Shear-Layer Thickness.....	382
9.4.4	Bed Load Equations Based on Concept of Sliding and Rolling.....	382
9.4.5	Bed Load Equations for Non-Uniform Sediment.....	390
9.5	Probabilistic Concept for Bed-Load Transport.....	394
9.5.1	Einstein's Bed Load Equations.....	394
9.5.1.1	Basic Concepts.....	394
9.5.1.2	Physical Model.....	394
9.5.1.3	Determination of Probability of Erosion.....	396
9.5.2	Gessler's Equation (1965).....	401
9.5.3	Modified Einstein's Approach.....	402
9.6	Saltation.....	405
9.6.1	Bagnold's Model (1966) due to Energy Concept.....	411
9.7	Image Analysis on Particle Motion.....	412
9.7.1	Particle Velocity and Its Characteristics over Rough Beds.....	417
9.8	Suspended Load.....	423
9.8.1	Theoretical Considerations of Suspension Equation.....	423
9.8.2	Velocity and Concentration Distributions in Sediment Mixed Fluid.....	429
9.8.3	Rouse Equation (1937) for Sediment Suspension.....	429
9.8.3.1	Applications.....	431
9.8.4	Einstein's Approach (1950).....	435
9.8.5	Hunt's Diffusion Equation (1954) for Sediment Suspension.....	437
9.8.5.1	Heterogeneous Sediment Sizes.....	440
9.9	Direct Computation of Suspension Grain Size Distributions.....	441
9.9.1	Conditions of Log-Normality in Suspension.....	448
9.9.2	Computation of Deposition from Suspension.....	451
9.9.3	Uppsala (UNGI) Experiments.....	453
9.9.4	Calcutta (ISI) Experiments.....	454

9.9.5	Mathematical Model	456
9.9.5.1	Interpretation of Paleo-Flow Velocities.....	461
9.9.6	Mazumder's Model (1994).....	462
9.9.7	Other Developments	464
9.10	Sediment Concentration in Suspension.....	466
9.10.1	Van Rijn's Equation (1984)	466
9.10.2	Woo et al.'s Equation (1988)	468
9.10.3	Umeyama's Equations (1992, 1999).....	469
9.10.4	Cellino and Graf's Equation (2000).....	471
9.10.5	Other Models	473
9.11	Stratification Effects by Suspension Concentration	474
9.11.1	Estimation of Near-Bed Velocity and Reference Concentration	483
9.12	Bed Roughness Effects on Suspension Distributions.....	485
9.12.1	Patterns of Grain-Size Distributions in the Transport Layer	495
9.13	Total Load.....	498
9.13.1	Total Load by Einstein (1950).....	499
9.13.2	Total Load by Bagnold (1966)	499
9.13.3	Total load by Chang et al. (1967).....	500
9.14	Summary	500
9.15	Exercise Problems	502
Chapter 10	Bedform Migration and Scour Structures.....	503
10.1	Introduction	503
10.2	Resistance to Flow	503
10.3	Resistance Formulae.....	504
10.3.1	Lacey's Formula	508
10.3.2	Garde and Rangaraju's Formula	508
10.4	Bedforms	509
10.5	Empirical Relations for Ripples and Dunes.....	513
10.6	Sand Bars.....	517
10.7	Theoretical Developments	519
10.8	Different Types of Ripples.....	530
10.9	Initiation of Bedforms	532
10.10	Bedform Migration.....	536
10.10.1	Bedform Migration – Model Studies	538
10.10.2	Laboratory Flume Studies	545
10.11	Scouring Process	553
10.11.1	Components of Scouring Process	555
10.11.2	Scour Below Pipe Lines.....	555
10.11.3	Crescentic Scour.....	560
10.11.3.1	General Analysis of Scour Geometry	565
10.11.4	Scour Around Submerged Cylinders of Different Shapes	567
10.12	Scour around Cylindrical Bridge Piers.....	569
10.13	Flow and Scour around Complex Bridge Piers.....	576
10.14	Scour Protection Measures	580
10.14.1	Bed Armoring Protective Measures	581
10.14.1.1	Riprap	581

10.14.1.2	Partially Grouted Riprap	581
10.14.1.3	Articulating Concrete Blocks (ACB)	582
10.14.1.4	Gabion Mattresses	582
10.14.1.5	Grout-Filled Mats	582
10.14.1.6	Sack Gabions	582
10.14.2	Flow Altering Protective Measures	582
10.14.2.1	Tetrahedral Frames	582
10.14.2.2	Ring Columns	582
10.14.2.3	Sheath	583
10.14.2.4	Collar	584
10.14.2.5	Cable with Collar	584
10.14.3	Combination Methods	584
10.14.3.1	Riprap and Collar	584
10.14.3.2	Raft with Flexible Apron	584
10.15	Experimental and Field Studies on Scour Protection Systems	584
10.15.1	Use of Raft Foundation as Scour Protection Measure	586
10.16	Summary	588
10.17	Exercise Problems	590
