Chapter 1. Introduction	1
Acknowledgments	4
Chapter 2. Preliminaries on F	5
2.1. F as a group of homeomorphisms	5
2.2. F as a diagram group	5
2.3. The relation between F as a diagram group and F as a group of homeomorphisms	10
2.4. On orbitals and stabilizers in F	12
2.5. The derived subgroup of F	13
Chapter 3. The Stallings 2-core of subgroups of diagram groups	15
Chapter 4. Paths on the core of a subgroup $H \leq F$	21
Chapter 5. The closure of a subgroup $H \leq F$	27
Chapter 6. Transitivity of the action of H on the set $\mathcal{D}$	33
Chapter 7. The generation problem in F	39
Chapter 8. The Tuples algorithm	49
Chapter 9. F is a cyclic extension of a subgroup K which has a maximal elementary amenable subgroup	55
Chapter 10. Computations related to $\mathcal{L}(H)$	59
10.1. On the algorithm for finding a generating set of $\text{Cl}(H)$	59
10.2. Core 2-automata	65
10.3. Maximal subgroups of F of infinite index	72
Chapter 11. Solvable subgroups of Thompson's group F	77
11.1. On the closure of solvable subgroups	77
11.2. Characterization of solvable subgroups $H \leq F$ in terms of the core $\mathcal{L}(H)$	81
Chapter 12. Open problems	89
12.1. Subgroups of F which contain the derived subgroup of F	89
12.2. Maximal subgroups of F of infinite index	89
12.3. Subgroups $H \leq F$ with finite core $\mathcal{L}(H)$	91
Bibliography	93
