

Preface	v
About the Author	xi
Chapter 1 Heterogenous Catalysis: History and Processes	1
1.1 Introduction	1
1.2 The Definition of Catalysis	5
1.2.1 The Berzelius Definition	7
1.2.2 Chemical Thermodynamics and Catalytic Kinetics: The Ostwald Definition	8
1.2.3 The Sabatier Principle	11
1.3 The Golden Age of Heterogenous Catalysis	14
1.3.1 Introduction	15
1.3.2 The First Golden Age of Heterogenous Catalysis	18
1.3.3 The Second Golden Age of Heterogeneous Catalysis	22
1.4 Summary; Introduction to the Book Chapters	26
References	34
Chapter 2 Founding Principles of Heterogeneous Catalysis Science	37
2.1 Introduction	37
2.2 The Catalytic Reactive Site	42
2.2.1 The Langmuir Adsorption Isotherm	43
2.2.2 The Taylor Reaction Site	46

2.2.3	The BET Adsorption Isotherm: Determination of Surface Area	48
2.2.4	Pore Size Distribution: The T-plot	50
2.2.5	Pore Diffusion and Reaction Rate	52
2.2.6	The Concentration of Reactive Centers: Transient Kinetics	54
2.3	Fundamentals of Surface Reactivity	58
2.3.1	Physical Chemistry of Chemisorption	59
2.3.2	The Surface Science View	62
2.3.2.1	Surface Structure and Reactivity	62
2.3.2.2	Trends in Adsorption Energies	68
2.3.2.3	Transition States and the Brønsted-Evans-Polanyi Relation	75
2.3.3	The Nature of the Surface Chemical Bond: Chemical Reactivity Descriptors	84
2.3.3.1	Introduction	84
2.3.3.2	The Electronic Structure and Bond Energy of Transition Metals	85
2.3.3.3	Quantum Chemistry of the Surface Chemical Bond	88
2.3.3.4	Molecular Bond Activation	97
2.4	Catalytic Reactivity and Kinetics	105
2.4.1	Introduction	105
2.4.2	The Langmuir-Hinshelwood-Hougen-Watson Equations	108
2.4.3	The Reaction Order and Apparent Activation Energy (from Micro to Global Kinetics)	112
2.4.4	Sabatier Principle Kinetic Equations	121
2.5	Summary	127
	References	130

Chapter 3 Catalytic Hydrogenation Reactions **143**

3.1	Mechanism of Hydrocarbon Activation	145
3.1.1	Ethene Hydrogenation by Transition Metals	145
3.1.2	Hydrogenation and Dehydrogenation Catalyzed by Lewis Acid Oxides	152

3.1.3 Hydrogenolysis of n-Alkane Molecules	155
3.1.4 Selectivity of n-Alkane Conversion Catalyzed by Transition Metals; Isomerization	157
3.1.5 Alloy Catalysis; the Ensemble Effect	164
3.2 Mechanism of Hydrogenation Catalytic Reactions with N ₂ and CO	171
3.2.1 Nitrogen Hydrogenation; Ammonia Synthesis	172
3.2.1.1 Structure Sensitivity of the Ammonia Synthesis Reaction	175
3.2.1.2 The Associative N ₂ Activation Reaction	179
3.2.2 CO Hydrogenation Reactions	180
3.2.2.1 Mechanism of the Fischer-Tropsch Reaction	182
3.2.2.2 Microkinetics of the Fischer-Tropsch Reaction	194
3.2.2.3 Selectivity of the Fischer-Tropsch Reaction	205
3.2.2.4 Mechanism of Methanol Synthesis	209
3.3 Structure-Function Relation of Transition Metal- catalyzed Hydrogenation Reactions	215
3.4 Activation of Hydrocarbons with Heteroatoms	227
3.4.1 The Hydrodesulfurization and Hydrodenitrogenation Reactions	230
3.4.2 The Hydrodeoxygenation Reaction	245
3.4.2.1 Hydrodeoxygenation of Phenolics	247
3.4.2.2 Hydrodeoxygenation of Furan and Furfural	251
3.4.2.3 Carboxylic Acid Deoxygenation	256
3.5 Summary and List of Reactions	259
References	265

Chapter 4 Selective Catalytic Oxidation Reactions **297**

4.1 Introduction	297
4.2 The Four Main Catalytic Oxidation Systems	301
4.2.1 Introduction and Oxidation Fundamentals	301
4.2.2 Redox Systems	305

4.2.2.1	Autocatalytic Radical Reactions	305
4.2.2.2	Homogenous Selective Oxidation by Transition Metal Complexes	308
4.2.2.3	Heterogeneous Selective Transition and Noble Metal Catalysis	311
4.2.2.4	Reducible Solid-state Metal Oxide Catalysts	316
4.3	The Mechanism of Selective Catalytic Oxidation by Transition and Noble Metals	318
4.3.1	Ammonia Oxidation	318
4.3.2	Methanol Oxidation	324
4.3.3	Selective Oxidation of Ethene and Propene by Ag and Cu; Ethene Epoxidation	329
4.3.3.1	Ethene Epoxidation	330
4.3.3.2	Selective Propene Oxidation	343
4.4	Reaction Mechanisms of Solid-state Redox Oxidation Reactions	347
4.4.1	Introduction	347
4.4.2	Kinetics and Reactivity Principles	349
4.4.2.1	Mars-van Krevelen Kinetics	349
4.4.2.2	Reactivity Determinants	351
4.4.3	Solid-state Multicomponent Mo Oxide Catalysts	355
4.4.3.1	Mechanism of Selective Propene and Propane Oxygenation	355
4.4.3.2	Mechanism of Selective Methanol Oxidation	365
4.4.4	Vanadium Oxide and Related Catalyst Systems	374
4.4.4.1	Oxidation of Butane to Maleic Anhydride	375
4.4.4.2	Oxidative Dehydrogenation of Alkanes	382
4.4.4.3	Aerobic Reduction of NO by Ammonia to N ₂ ; Supported Vanadium Oxide and Metal-promoted Zeolite Catalysis	390
4.5	Summary; Elementary Reactions of Heterogeneous Selective Oxidation Catalysis	395
4.5.1	Selective Oxidation by Autocatalytic Radical Chain Reaction	396

4.5.2 Non-oxidative Radical Reactions	399
4.5.3 Alkane Activation by Reducible Oxide Atoms	400
4.5.3.1 The Rebound/Harpoon Mechanism of Methane to Methanol Oxidation	401
4.5.3.2 Homolytic C–H Bond Activation	401
4.5.4 Heterolytic Bond Activation Reactions	403
4.5.4.1 Transition Metals	404
4.5.4.2 Heterolytic Bond Dissociation by Oxides	406
4.5.5 The Oxene Oxygenation Reaction	407
4.5.6 Oxygen Insertion Into the Alkene π Bond; the Epoxidation Reaction	408
4.5.7 Reactivity Descriptors; the Dowden M-shaped Volcano Curve	412
4.5.8 Summary and List of Reactions	421
References	422

Chapter 5 Solid Acid Catalysis **449**

5.1 Introduction	449
5.1.1 Initial Developments	450
5.1.2 The Discovery of Zeolite Catalysis	452
5.1.3 Organic Carbocations	454
5.1.4 The Catalytic Reaction Cycle; Shape-selective Catalysis	457
5.1.5 Carbocations as Transition States	462
5.2 Inorganic Chemistry of Solid Acidity	466
5.2.1 The Hammett Function	466
5.2.2 The Acidity of Mixed Oxides	468
5.2.3 The Definition of Deprotonation Energy (DPE)	474
5.2.4 The Theory of Surface Brønsted Acidity	478
5.3 Zeolite Catalysts, Their Structure and Acidity	489
5.3.1 Introduction	489
5.3.2 The Structure Dependence of the Zeolite Deprotonation Energy	493
5.3.3 DPE as Function of Al/Si Framework Composition	496

5.3.4 DPE Variation Due to Al^{3+} Substitution by Fe^{3+} and Ga^{3+}	500
5.4 Zeolite Catalysis, Structure Dependence and Shape Selectivity	502
5.4.1 Introduction	502
5.4.2 Hydrocarbon Adsorption in Zeolites	503
5.4.3 Bifunctional Catalytic Reactions	506
5.4.3.1 The Mechanisms of Hydroisomerization, Hydrocracking, and Aromatization	507
5.4.3.2 The Kinetics of the Hydroisomerization and Hydrocracking Reaction; Inverse Shape Selectivity	513
5.4.3.3 Reaction Rate as a Function of Zeolite Structure; the Catalytic Hammett Acidity Function	516
5.4.4 Shape-selective Elementary Reactions	520
5.4.4.1 Restricted Transition State Selectivity	520
5.4.4.2 Protonation of Isobutene; Curvature Effects	522
5.4.4.3 Pre-transition State Stabilization; Methanol Alkylation of Toluene	525
5.4.5 Zeolite-catalyzed Dehydration of Methanol to Alkenes, Alkanes, and Aromatics	528
5.4.6 Kinetics of Bimolecular Solid Acid-catalyzed Reactions	538
5.4.6.1 Bimolecular Reaction Kinetics of the Dimerization of Alkene	538
5.4.6.2 The Alkylation of Isobutane and Alkene	542
5.5 Summary and List of Reactions	548
References	553

Chapter 6 Molecular Heterogenous Catalytic Reactions	573
6.1 Introduction	573
6.2 Disproportionation and Polymerization Catalysis	576
6.3 Lewis Acid Single-site Heterogenous Catalysts	582

6.3.1	Catalysis by Non-reducible Lewis Acid Cations	583
6.3.1.1	Selective Oxygen Atom Insertion into Propene and Cyclohexanone	583
6.3.1.2	Lewis Acid-catalyzed Hydride Transfer Reactions in Polar Molecules; Carbohydrate Conversion Catalysis	587
6.3.1.3	Heterolytic C–H Bond Activation by Ga and Zn Cations	590
6.3.2	Single-site Redox Catalysis; Selective Oxidation	595
6.3.2.1	Redox-selective Oxidation by Zeolite Compounds	595
6.3.2.2	The Panov Benzene Hydroxylation Reaction	600
6.3.2.3	Methane to Methanol Oxidation	603
6.3.2.3.1	The Rebound/Harpoon Mechanism of Methane Hydroxylation	604
6.3.2.3.2	The Heterolytic Pathway of Methane Oxidation	606
6.3.2.3.3	The Hydrogen Peroxide Reaction with Methane	607
6.3.3	Methane to Aromatics Catalysis; The Methane Dehydro-aromatization Reaction	609
6.3.4	Summary; Clusters in Zeolites	612
6.4	Single-atom/Reducible Support Catalysts; Au Catalysis	613
6.4.1	Single-atom Catalysis	613
6.4.2	Au Catalysis	616
6.4.2.1	CO Oxidation and the Water-gas Shift Reaction; The Dual Site Mechanism	619
6.4.2.2	Alcohol Oxidation in Gas Phase	621
6.4.2.3	Alcohol Oxidation in the Water Phase	622
6.4.2.4	Selective Oxidation of 5-hydroxymethylfurfural (HMF) to 2,5-furandicarboxylic Acid (FDCA)	624

6.5 Summary and List of Reactions	626
References	628
Chapter 7 The Catalytic Enterprise	646
7.1 Introduction	646
7.2 Catalytic Science-Technology Dynamics	648
7.2.1 Science Philosophy Views	648
7.2.2 Three Case Studies from Catalysis	659
7.2.2.1 Sulfur Reduction and Automotive Exhaust Reduction	659
7.2.2.2 Zeolite-Catalyzed Processes	661
7.2.2.3 Heterogenous Coordination Complex Catalysts	664
7.3 Catalysis Science	666
7.3.1 Introduction	666
7.3.2 Reaction Mechanism and Catalyst Design	667
7.3.2.1 The Working Catalyst	667
7.3.2.2 The Simulation of Surface Reactivity	674
7.3.3 Catalysis, a Predictive Science?	679
7.3.4 Future Perspective	682
References	686
Index	693
