

Table of Contents

1	Introduction.....	1
1.1	The immune system.....	1
1.1.1	Granulocytes	1
1.1.2	Polymorphonuclear leukocyte (PMN) function	3
1.2	The trace element zinc.....	7
1.2.1	Zinc and the immune function	8
1.2.2	The role of zinc in acute inflammation	9
1.3	Granulocyte-macrophage colony-stimulating factor (GM-CSF)-induced mitogen-activated protein kinases (MAPK) signaling.....	10
1.4	The role of zinc in the MAPK signaling pathway	13
2	Aim of the thesis	14
3	Materials and methods	15
3.1	Materials	15
3.1.1	Equipment.....	15
3.1.2	Laboratory supplies.....	16
3.1.3	Cell culture media and additives	17
3.1.4	Flow cytometry antibodies.....	17
3.1.5	Western blot antibodies.....	18
3.1.6	Commercially available kits	18
3.1.7	Primer.....	18
3.1.8	Miscellaneous reagents.....	18
3.1.9	Software	20
3.2	Methods.....	22
3.2.1	Isolation and culture of primary human leukocytes and granulocytes from whole blood.....	22
3.2.2	Conditions in cell culture with primary human leukocytes and granulocytes	23
3.2.3	Conditions in stimulation experiments with primary human leukocytes and granulocytes	23
3.2.4	Cell counting using Bürker counting chamber and trypan blue staining	24

3.2.5	Flow cytometry	24
3.2.6	Western blot	29
3.2.7	Ribonucleic acid (RNA) isolation	33
3.2.8	Reverse transcription	33
3.2.9	Quantitative real-time polymerase chain reaction (PCR).....	34
3.2.10	Cytotoxicity test using propidium iodide (PI) staining	35
3.2.11	Quantification of neutrophil metabolic activity using MTT-assay ...	35
3.2.12	Measurement of reactive oxygen species (ROS) production using dihydrorhodamine 123	36
3.2.13	Quantification of neutrophil extracellular traps (NET) formation using a well plate reader.....	36
3.2.14	Enzyme-linked immunosorbent assay (ELISA)	37
3.2.15	Statistical analysis.....	38
4	Results	39
4.1	Zinc incubation increased the granulocyte-macrophage colony- stimulating factor receptor (GM-CSFR) surface expression in PMN and lymphocytes whereas monocytes showed an internalization of surface GM- CSFR.....	39
4.2	Zinc supplementation has no influence on the total GM-CSFR expression in each leukocyte subset	45
4.3	GM-CSF stimulation causes a short-term redistribution of intracellular zinc examined with the ZinPyr-1 probe.....	46
4.4	Zinc activates MAPK signaling and augments GM-CSF-induced signaling in the entirety of leukocytes	47
4.5	Zinc pre-incubation increases mRNA expression of the MAPK- dependent gene Mcl-1	48
4.6	GM-CSF stimulation leads to a high activation status of PMN, whereas zinc has a rather immune-modulating role balancing the immune response.....	50
5	Discussion.....	55
6	Summary.....	66
7	Acknowledgements	67
