

Table of contents

Chapter I: Algorithms for generalized mean/variance problems

1. Fundamentals of Portfolio Theory.....	4
1.1. Utility theory and mean/variance principle.....	5
1.2. Mean/variance efficient frontier.....	7
1.3. Discrete time intertemporal portfolio theory.....	11
2. The ordinary Markowitz-algorithm.....	14
2.1. Basic model.....	15
2.2. Kuhn-Tucker-conditions.....	16
2.3. A special case.....	22
2.4. Continuity of the efficient frontier.....	23
2.5. Differentiating the efficient frontier.....	29
2.6. Concavity and minimum variance portfolio.....	30
2.7. Feasible base solution.....	32
2.8. A numerical application.....	33
3. Generalized Markowitz-algorithm.....	40
3.1. Optimization model.....	41
3.2. Optimum conditions.....	44
3.3. Feasible base solution.....	46
3.4. Numerical example.....	49
4. Extended Markowitz algorithm.....	59
4.1. Optimization model: unrestricted-in-sign variables.....	59
4.2. Feasible base solution.....	61
4.3. Numerical example.....	64
5. Summary of chapter one.....	68

Chapter II: International asset allocation with variable hedging opportunities

1. Overview of the literature.....	71
2. The model.....	75
3. Case study.....	83
3.1. Underlying data	84
3.2. An international US-\$ investor.....	85
3.3. Investment behaviour with and without variable hedging opportunities	92
4. Critical assessment.....	95
5. Summary of chapter two.....	96

Chapter III: Downside risk approaches

1. Overview of the literature.....	99
2. Safety first - the principles.....	103
2.1. Roy's paper [1952].....	104
2.2. The Telser criterion	106
2.3. The Roy criterion	110
2.4. The Kataoka criterion.....	112
3. Extensions of safety first.....	114
3.1. Shortfall probability efficient frontier	115
3.2. Shortfall probability efficient frontier subject to linear restrictions	118
3.3. Shortfall probability efficient frontier with riskless lending and borrowing	121
3.4. Efficient shortfall frontier.....	124
3.5. Efficient shortfall frontier subject to linear restrictions.....	127
4. Linear tracking error minimization.....	129
4.1. Traditional tracking error measures.....	130
4.2. A linear model for tracking error minimization.....	134
4.3. Case study.....	139
5. Summary of chapter three.....	146

Chapter IV: Portfolio insurance with options

1. Overview of the literature	149
2. Static and dynamic portfolio insurance.....	155
2.1. Static portfolio protection.....	156
2.2. Application for static portfolio protection	161
2.3. Synthetic protective put strategy.....	165
2.4. Case study for dynamic portfolio insurance	168
3. Probability distributions of optioned stock portfolios	171
3.1. The simulation model.....	172
3.2. Applying the algorithm	180
3.3. Option strategies and their probability distributions.....	181
4. Summary of chapter four	186
Summary.....	188
References.....	190
Index.....	199
