|-----------|---------------------------------------------------------------------------------|----------|
| <b>1</b>  | <b>Introduction.....</b>                                                        | <b>1</b> |
| <b>2</b>  | <b>Safety case and safety assessment .....</b>                                  | <b>5</b> |
| 2.1       | FEP database for repository in salt .....                                       | 7        |
| 2.1.1     | Webpage, salt knowledge archive and database .....                              | 9        |
| 2.1.2     | FEP list .....                                                                  | 10       |
| 2.1.3     | Further representations of FEP listing .....                                    | 14       |
| 2.1.3.1   | FEP matrix.....                                                                 | 14       |
| 2.1.3.2   | List of associated processes .....                                              | 15       |
| 2.1.3.3   | List of decisions .....                                                         | 16       |
| 2.1.4     | Salt knowledge archive; references .....                                        | 17       |
| 2.2       | Scenario development .....                                                      | 19       |
| 2.2.1     | Results from the German scenario working group .....                            | 19       |
| 2.2.2     | NEA .....                                                                       | 21       |
| 2.3       | Radionuclide mobility .....                                                     | 23       |
| 2.3.1     | Cooperation with NAGRA .....                                                    | 23       |
| 2.3.2     | First Nuclides .....                                                            | 25       |
| 2.3.3     | CAST .....                                                                      | 26       |
| 2.3.3.1   | General outcomes .....                                                          | 27       |
| 2.3.3.2   | Simulations for the <sup>14</sup> C release from a HLW repository in salt ..... | 28       |
| 2.3.3.2.1 | Repository concept .....                                                        | 28       |
| 2.3.3.2.2 | <sup>14</sup> C inventory .....                                                 | 29       |
| 2.3.3.2.3 | Reference scenario.....                                                         | 31       |
| 2.3.3.2.4 | Simulation model .....                                                          | 33       |
| 2.3.3.2.5 | Results and discussions .....                                                   | 37       |
| 2.4       | Relevance of gases in the safety case .....                                     | 43       |
| 2.4.1     | Introduction.....                                                               | 43       |
| 2.4.2     | Gas sources in a deep geological repository.....                                | 44       |
| 2.4.3     | Gas transport in deep geological repositories .....                             | 46       |
| 2.4.3.1   | Gas transport in clay systems.....                                              | 47       |
| 2.4.3.2   | Gas transport in crystalline rock systems .....                                 | 49       |

|           |                                                                                                                                        |           |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 2.4.3.3   | Gas transport in salt systems.....                                                                                                     | 49        |
| 2.4.4     | Process level modelling of gas transport.....                                                                                          | 50        |
| 2.4.4.1   | Clay- and crystalline rock systems.....                                                                                                | 50        |
| 2.4.4.2   | Salt systems .....                                                                                                                     | 51        |
| 2.4.5     | Radiological impact.....                                                                                                               | 52        |
| 2.4.6     | Treatment in safety assessment & management of uncertainties .....                                                                     | 53        |
| 2.4.7     | Importance for the safety case.....                                                                                                    | 55        |
| 2.5       | Treatment of uncertainty .....                                                                                                         | 56        |
| 2.5.1     | International workshop and cooperation .....                                                                                           | 56        |
| 2.5.2     | Methodological investigation of uncertainty and sensitivity analysis<br>for final repository systems in international comparison ..... | 60        |
| 2.5.2.1   | Second- and total-order sensitivity analysis using the RS-HDMR<br>meta-modelling approach .....                                        | 62        |
| 2.5.2.1.1 | The RS-HDMR method.....                                                                                                                | 63        |
| 2.5.2.1.2 | Investigation of RS-HDMR with a nonlinear repository model .....                                                                       | 66        |
| 2.5.2.1.3 | Results .....                                                                                                                          | 69        |
| 2.5.2.1.4 | Conclusions .....                                                                                                                      | 73        |
| 2.5.2.2   | Sensitivity analysis benchmarking .....                                                                                                | 74        |
| 2.5.2.2.1 | The model systems.....                                                                                                                 | 75        |
| 2.5.2.2.2 | Sensitivity analysis of the shale repository system .....                                                                              | 81        |
| 2.5.2.3   | Conclusions and outlook.....                                                                                                           | 88        |

| 4.1.5    | Conclusions .....                                                                       | 137        |
| 4.2      | Bentonite re-saturation – non-isothermal water uptake .....                             | 138        |
| 4.2.1    | Motivation .....                                                                        | 138        |
| 1.1.1.   | Test set-up and procedure.....                                                          | 138        |
| 4.2.2    | Test history .....                                                                      | 139        |
| 4.2.3    | Characteristic material data .....                                                      | 141        |
| 4.2.4    | Results for the original test set-up.....                                               | 142        |
| 4.2.4.1  | Temperature distribution .....                                                          | 142        |
| 4.2.4.2  | Reproducibility of the tests.....                                                       | 142        |

|         |                                                                                                       |     |
|---------|-------------------------------------------------------------------------------------------------------|-----|
| 4.2.4.3 | Dynamics of the water content distribution .....                                                      | 143 |
| 4.2.4.4 | Water content at the water inlet .....                                                                | 144 |
| 4.2.4.5 | Characteristic phases during evolution of the water content<br>distribution .....                     | 144 |
| 4.2.4.6 | Water uptake from the reservoir.....                                                                  | 147 |
| 4.2.5   | Results for the improved test set-up.....                                                             | 148 |
| 4.2.6   | Summary and conclusions .....                                                                         | 150 |
| 4.3     | Microbial processes .....                                                                             | 151 |
| 4.3.1   | Clay .....                                                                                            | 151 |
| 4.3.2   | Rock salt.....                                                                                        | 154 |
| 4.3.2.1 | Overview of the relevant microbial processes .....                                                    | 154 |
| 4.3.2.2 | Contribution to NEA natural analogue workshop.....                                                    | 154 |
| 4.3.2.3 | Contribution to salt club .....                                                                       | 155 |
| 4.4     | Natural analogues.....                                                                                | 158 |
| 4.4.1   | Analogues for safety cases in rock salt .....                                                         | 159 |
| 4.4.1.1 | General aspects of natural analogues for the safety case .....                                        | 160 |
| 4.4.1.2 | The application of analogues in national repository development<br>programmes based on rock salt..... | 165 |
| 4.4.1.3 | Rock salt specific analogue results .....                                                             | 167 |
| 4.4.1.4 | Learning lessons from other industries .....                                                          | 172 |
| 4.4.1.5 | Final comments and conclusions .....                                                                  | 174 |
| 4.4.1.6 | Recommendations for further work .....                                                                | 177 |
| 4.4.2   | Natural Analogue working Group (NAWG).....                                                            | 180 |
| 4.4.2.1 | Mechanical stability and self-sealing of rock salt.....                                               | 181 |
| 4.4.3   | Natural analogue study Ruprechtov (CZ) - An experience report.....                                    | 183 |
| 4.4.3.1 | Main aspects of the report .....                                                                      | 184 |
| 4.4.3.2 | Lessons learned .....                                                                                 | 189 |
| 4.4.4   | Analogues for a repository in a clay formation .....                                                  | 194 |
| 4.4.4.1 | Study approach .....                                                                                  | 195 |
| 4.4.4.2 | Analogue of Kushaym Matruk (Jordan) - example of the<br>documentation .....                           | 204 |
| 4.4.4.3 | Summary and Outlook .....                                                                             | 210 |
