

Contents

	Acknowledgement	9
	Introduction	10
	Abbreviations	12
Chapter 1	The definition of Language	15
Chapter 2	Speech perception and comprehension	21
	Learning lingual statistics	21
	Understanding of ambient speech	23
	An innate auditory magnet	26
	Perception of words and sentences	29
	Event-related potentials of speech perception	35
	Semantics	37
	Phonetic/semantic processing of language	44
	Language comprehension	49
	Disorders of speech perception and comprehension	53
Chapter 3	Development	57
	Unfolding of an innate disposition	57
	From babbling to word production	59
	Sentence construction	70
	Specific language impairment	77
	Developmental verbal dyspraxia	80
	Stuttering	84
	Williams syndrome	86
Chapter 4	Evolution	89
	A speciation event	89
	Vocal tract	90
	Lexicon	93
	Syntax	97
	Speech	99
	Language pathways	102
	The genus <i>Homo</i> and their language	103
	Genetic differences between modern humans and Neanderthals	114
Chapter 5	Cingulate gyrus: The pacemaker	117
	From sound to voice	117
	Cingulate vocalization	118
	The anatomy of vocalization	118

	The integration of MCC and SMA in humans	122
	Species-specific calls and affective vocalizations	127
	Voluntary, involuntary and quasi-voluntary vocalizations	130
	Metamorphosis of affective vocalizations into words	135
	Looking for the human vocalization area	138
	Akinetic mutism	142
Chapter 6	The supplementary motor area and sequencing of speech	145
	Execution of foundational behavioural movements	145
	The sequencing of action	150
	The sequencing of speech	152
	The will to talk	159
	SMA syndrome	163
Chapter 7	Insula: The island of articulation	167
	Integration of sensory inputs subserving feeding and vocalization	167
	Anatomy	168
	Insula and affective awareness	174
	Insula and speech	176
	Insula and prosody	180
	Affective prosody	182
	Linguistic prosody	185
	Apraxia of speech	186
Chapter 8	Limbic speech	191
	Limbic organization of communicative behaviour	191
	Limbic pathways	195
	Uncinate fasciculus	195
	Fronto-striate tract	200
	Frontal aslant tract	202
	Transcortical aphasia	205
	Transcortical motor aphasia or “limbic aphasia”	206
	Transcortical sensory aphasia	210
	Mixed transcortical aphasia	211
Chapter 9	Syntax	213
	The gist of sentence	213
	The origins of syntax	221
	The neural correlates of syntax	224
	Syntax learning	228
	Universal Grammar	232
Chapter 10	Verbal working memory	239
	General working memory	239
	A workbench for verbal memory	241
	Development	245
	The emergence of verbal working memory	248
Chapter 11	The extraction and application of rules	253
	Logic and grammar converge to reflect the real world	253
	Prefrontal hierarchical neural organization	253
	Hierarchical organization of speech production	257
	A triplane interface	258
	Learning rules	262
	Why the anterior insula recruits Broca's area?	267

Chapter 12	Speech production	271
	Broca's area: The speech conductor	271
	Anatomy and histology of Broca's area	271
	Functions of Broca's area	276
	Semantic processing	279
	Syntactic processing	282
	Phonological processing	288
	Integration of the semantic, syntactic and phonological processes	295
	Integration of self-generated propositional speech	300
	Disorders of speech production	303
Chapter 13	Processing of verbal concepts	309
	Categorization of percepts	309
	Generation of concepts	310
	Inferior parietal lobule, concepts and words	319
	Angular gyrus	322
	Supramarginal gyrus	325
	Disorders of speech conceptualization	328
Chapter 14	The pathways to language	331
	Patterns of white matter connections	331
	Dorsal fibre tracts	334
	Superior longitudinal fasciculus	336
	Arcuate fasciculus	338
	Ventral fibre tracts	339
	Inferior fronto-occipital fasciculus/extreme capsule fasciculus	341
	Middle longitudinal fasciculus	344
	Inferior longitudinal fasciculus	345
	Commissural pathways	346
	Integration of speech comprehension and production	347
	Conduction aphasias	349
Chapter 15	The Basal ganglia	355
	General anatomy and physiology	355
	Learning how to sequence	360
	Dopamine, sequencing and chunking	362
	Habit learning	364
	Speech-related functions	367
	Syntax learning	369
	Motivation of speech	370
	Speech production	372
	Speech disorders in basal ganglia lesions	375
Chapter 16	The cerebellum, cognition and language	381
	Anatomy and physiology	381
	The cerebellum and language	387
	Language disorders due to cerebellar lesions	391
Chapter 17	Procedural memory	397
	Memory of skill	397
	Neural correlates of procedural memory	398
	Language-related functions	402
Chapter 18	Mirroring words and meanings	409

	A surprising finding	409
	Mirror neurons and speech	413
	Controversy over mirror neurons	419
Chapter 19	Language as an Enigma	425
	Outlining the mystery	425
	Some necessary modifications	430
	An inconclusive debate	432
	The frontal approach to the language enigma	440
	Language is a communication medium	440
	Language arising from animal vocalization	441
	Language supported by natural selection	442
	Development of language recapitulating its evolution	442
	Language learned by imitation	443
	The deep structure of languages displays agency relationship	444
	The grammatical hierarchy represents agency hierarchy	444
	Language is generated in brain structures processing agency	445
Chapter 20	Gestures	447
	When body mediates information	447
	Gestures, as media for communicative behaviour	447
	Gestures in nonhuman primates	449
	Human gestural communication	450
	The parallel evolution-development of bodily and vocal gestures	454
	Neural correlates of gestures	457
	Manual sign language	461
	The theory of the gestural origin of language	463
Chapter 21	Imitation	467
	Duplication of information	467
	Vocal imitation in humans	469
	The neural substrate of verbal imitation in adults	471
Chapter 22	Imitation in nonhuman species	479
	Vocal learning in animals	479
	Vocal imitation in nonhuman primates	481
	Vocal imitation in songbirds	486
	Neural correlates of the song in birds	488
	Homologies between songbirds and humans	492
Chapter 23	An informal fallacy	497
	The difference between language acquisition and learning	497
	Myelination and maturation of infants' brain	500
	Language tracts in infancy and childhood	505
	Language processing in early childhood	508
	Development of affective consciousness	512
	Development of perceptual awareness and self-consciousness	515
Chapter 24	The brain's archaic copy device	519
	The difference between infantile and adult imitation	519
	Early infantile imitation	523
	Late infantile imitation	529
	Origins of infantile gestural and vocal imitation	532
	Anatomy and physiology of cingulate motor areas	537

Chapter 25	Universal Grammar as the shadow of action	543
	Signalizing actions with actions	543
	The verbum mediates the action	545
	Neural correlates of the processing of verbs	548
	How children learn verbs	551
	Causality and Universal Grammar	553
	Agency as mediating Universal Grammar	558
	Are causality relations embedded in the speech motor system?	562
Chapter 26	The anatomy of agency	565
	Identification of biological movements	565
	Neural correlates of verbal representations of agency	568
	The motor theory of language	579
Chapter 27	Verification by Splitting the Brain	583
	An abandoned avenue of research	583
	Anatomy and physiology of the corpus callosum	583
	Surgical procedure	586
	Neurological consequences of callosotomy	588
	Split brain and neuroscience	590
	Language in the split brain	593
