Vorwort

Summary	I
----------------	----------

Zusammenfassung	IV
------------------------	-----------

1 Introduction	1
-----------------------	----------

2 Material	5
-------------------	----------

2.1 Material	5
--------------	---

2.2 Chemical pre-treatment of the bulk material and particle size separation	6
--	---

References	10
------------	----

3 Methods	11
------------------	-----------

3.1 Morphology and surface	12
----------------------------	----

3.1.1 Environmental Scanning Electron microscopy (ESEM)	12
---	----

3.1.2 Specific surface area	12
-----------------------------	----

3.2 Mineralogy	13
----------------	----

3.2.1 X-Ray Diffraction Analysis (XRD)	13
--	----

3.3 Chemical composition	14
--------------------------	----

3.3.1 X-Ray Fluorescence Analysis (XRF)	14
---	----

3.3.2 Inductively Coupled Plasma - Optical Emission Spectroscopy	17
--	----

3.4 Short range order	18
-----------------------	----

3.4.1 Fourier Transform Infrared Spectroscopy (FTIR)	18
--	----

3.5 Thermal reactions	19
-----------------------	----

3.5.1 Simultaneous Thermal Analysis (STA)	19
---	----

3.6 Exchange behaviour and interlayer composition	21
---	----

3.6.1 Cation Exchange Capacity (CEC)	21
--------------------------------------	----

3.6.2 Layer Charge Determination (ξ)	24
--	----

References	26
------------	----

4 Mineralogical characterisation and selection strategy	29
4.1 Introduction	29
4.2 Bentonites and Smectites	30
4.3 Vermiculite	41
4.3.1 Morphological, mineralogical, chemical and thermal properties	41
4.3.2 Cation exchange reactions	50
4.4 Illite	56
4.5 Sepiolite and Palygorskite	60
4.5.1 Morphological, mineralogical, chemical and thermal properties	60
4.5.2 Thermal transformation of sepiolite	64
4.6 Kaoline and Kaolinite	68
4.7 Magadiite	75
4.8 Conclusions	79
References	81
5 Comprehensive description of layer and edge charge and exchange properties	85
5.1 Introduction	85
5.2 Material	87
5.3 Layer charge and layer charge reduction	88
5.3.1 Methods	89
5.3.2 Results and Discussion	90
5.4 Edge Charge	95
5.4.1 Methods	95
5.4.2 Results and Discussion	96
5.5 Conclusions	103
References	103

6	Structural modifications during acid treatment of several clay minerals	107
6.1	Introduction	107
6.2	Materials and sample preparation	108
6.3	Methods	110
6.4	Results and Discussion	113
6.4.1	Bentonites and Smectites	113
6.4.2	Vermiculite	132
6.4.3	Illite	137
6.4.4	Sepiolite	144
6.4.5	Kaoline and Kaolinite	148
6.4.6	Magadiite	158
6.4.7	Effects of H_2SO_4 compared to HCl	162
6.5	Summary and conclusions	164
	References	166
	Appendix	169
