

Finitely Presented Groups

With Applications in Post-Quantum Cryptography and
Artificial Intelligence

Edited by
Volker Diekert and Martin Kreuzer

DE GRUYTER

Contents

Preface VII

Part I: Theory

Anthony M. Gaglione and Dennis Spellman

The Universal Theories of Various Classes of Groups: A Survey — 3

James Howie and Olexandr Konovalov

Generalized Triangle Groups of Type $(2, 3, 2)$ with No Cyclic Essential Representations — 27

Olga Kharlampovich and Christopher Natoli

On Countable Elementary Free Groups — 43

Alexei G. Myasnikov and Mahmood Sohrabi

Groups Elementarily Equivalent to the Classical Matrix Groups — 53

Matthias Neumann-Brosig

An Approximation Theorem for Finitely Generated Groups — 87

Part II: Algorithms

Alexander Hulpke

Some Examples of Computer Calculations with Finitely Presented Groups — 99

Martin Kreuzer and Florian Walsh

An Algorithmic Survey of Finite $\mathbb{Z}$ -Algebras — 115

Vladimir Shpilrain

Complexity of Some Algorithmic Problems in Groups: A Survey — 137

Part III: Applications

Jane Gilman

Lifting Surface Automorphisms in $\mathbb{R}^3$ to S^3 — 155

Delaram Kahrobaei and Keivan Mallahi-Karai

Secret Sharing Schemes Using Representation Theory of Finite Groups — 165

Gabriele Kern-Isberner

Algebraic Messages from the Probabilistic Entropy Principles for Knowledge Representation in Artificial Intelligence — 175

Kristina Rosenthal

Teaching Conceptual Modeling in the Age of Generative Conversational AI: Ideas for a Research Agenda — 199

Jens Zumbrägel

Noncommutative Group Actions for Cryptography — 209

Part IV: The Life and Work of Gerhard Rosenberger

Martin Kreuzer

A Brief Biography — 225

Gerhard Rosenberger's Books — 226

Gerhard Rosenberger's Papers — 228

Index — 239
