|--------------------------------------------------------------------------------------------|----|
| <b>On the Morphism <math>1 \rightarrow 121, 2 \rightarrow 12221</math></b>                 | 1  |
| Jean-Paul Allouche                                                                         |    |
| 1 Introduction                                                                             | 1  |
| 2 A Cousin of the Sequence $N$                                                             | 2  |
| 3 Relation with the (Prouhet-)Thue-Morse Sequence                                          | 3  |
| 4 “Vile” Integers and the Sequence $P = 2, 1, 1, 2, 2, 2, 1, 1, \dots$                     | 4  |
| 5 The Morphism $\varphi$ , Its Fixed Point $P$ , and Sturmian Sequences                    | 4  |
| 6 A Conjecture of Mahler and a Result of Dubickas                                          | 5  |
| 7 Sum-Free Sets and a Family of Morphism Generalizing $\varphi$                            | 5  |
| 8 Dimensions of the Lower Central Series Factors of a Certain<br>Just Infinite Lie Algebra | 6  |
| 9 The Morphism $\varphi$ and a Classical Kolam                                             | 6  |
| 10 A Simple Variant of $N$ and the Period-Doubling Sequence                                | 7  |
| 11 Another Simple Variant of Sequence $N$                                                  | 8  |
| 11.1 A Conjecture of Akiyama, Brunotte, Pethő and<br>Thuswaldner, and Vivaldi              | 9  |
| 11.2 Proofs of Conjectures in the OEIS for Sequences<br>A284388 and A284391                | 10 |
| References                                                                                 | 12 |
| <b>Polynomials and Combinatorial Identities</b>                                            | 15 |
| Horst Alzer                                                                                |    |
| 1 Introduction                                                                             | 15 |
| 2 Polynomials                                                                              | 16 |
| 3 Combinatorial Identities                                                                 | 21 |
| References                                                                                 | 31 |
| <b>Rainbow Greedy Matching Algorithms</b>                                                  | 33 |
| Patrick Bennett, Colin Cooper, and Alan Frieze                                             |    |
| 1 Introduction                                                                             | 33 |
| 2 GREEDY                                                                                   | 36 |
| 2.1 Solution to the Differential Equation                                                  | 39 |

|     |                                                                                                                                                   |     |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2.2 | Asymptotics for $\tau_0$ from $M(\tau) = 0$ .....                                                                                                 | 40  |
| 3   | MODIFIED GREEDY .....                                                                                                                             | 44  |
| 3.1 | Upper Bound on the Value of $\mu$ .....                                                                                                           | 47  |
| 4   | Final Thoughts .....                                                                                                                              | 49  |
|     | References .....                                                                                                                                  | 49  |
|     | <b>Predictive Models of Non-Performing Loans: The Case of Greece</b> .....                                                                        | 51  |
|     | A. Donatou, M. Stefanakos, K. Pappas, and J. Leventides                                                                                           |     |
| 1   | Introduction .....                                                                                                                                | 51  |
| 1.1 | Basics .....                                                                                                                                      | 51  |
| 1.2 | Literature Review .....                                                                                                                           | 52  |
| 1.3 | Scope of Our Research .....                                                                                                                       | 53  |
| 2   | Problem Definition and Methodology .....                                                                                                          | 54  |
| 2.1 | Introduction .....                                                                                                                                | 54  |
| 2.2 | Problem Definition and Research Objectives .....                                                                                                  | 54  |
| 2.3 | Methodology .....                                                                                                                                 | 56  |
| 3   | Results .....                                                                                                                                     | 57  |
| 3.1 | Variable Selection .....                                                                                                                          | 57  |
| 3.2 | Residential NPL Ratio Estimation .....                                                                                                            | 59  |
| 3.3 | Consuming NPL Ratio Estimation .....                                                                                                              | 61  |
| 3.4 | Corporate NPL Ratio Estimation .....                                                                                                              | 65  |
| 3.5 | NPL Ratio Estimation of All Loans .....                                                                                                           | 68  |
| 4   | Conclusions .....                                                                                                                                 | 70  |
|     | References .....                                                                                                                                  | 80  |
|     | <b>The Cost of Detection in Interaction Testing</b> .....                                                                                         | 81  |
|     | Ryan E. Dougherty                                                                                                                                 |     |
| 1   | Introduction .....                                                                                                                                | 81  |
| 2   | The Probabilistic Framework and $W$ .....                                                                                                         | 82  |
| 3   | A Stein-Lovász-Johnson Upper Bound .....                                                                                                          | 83  |
| 4   | Lovász Local Lemma Bounds .....                                                                                                                   | 87  |
| 5   | Conclusion and Future Work .....                                                                                                                  | 88  |
|     | References .....                                                                                                                                  | 88  |

    6.2 Non-symmetric Row and Column Dissection ..... 155

7 Extensions and Variations ..... 156

    7.1 Rank Allocation ..... 157

    7.2 Sparsity Refinement ..... 157

|     |                                                   |     |
|-----|---------------------------------------------------|-----|
| 7.3 | Generalized Multilevel Low Rank Matrix .....      | 157 |
| 8   | Numerical Examples .....                          | 159 |
| 8.1 | Asset Covariance Matrix .....                     | 159 |
| 8.2 | Fiedler Matrix .....                              | 163 |
| 8.3 | Discrete Gauss Transform Matrix .....             | 163 |
| 8.4 | Distance Matrix .....                             | 165 |
| 8.5 | Multiscale Inverse Polynomial Kernel Matrix ..... | 166 |
|     | References .....                                  | 169 |

## **A Code-Based Watermarking Scheme for the Protection of Authenticity of Medical Images .....**

Iosif Polenakis, Vasileios Vouronikos, Nikolaos Vouronikos, Maria Chroni, and Stavros D. Nikolopoulos

|     |                                                 |     |
|-----|-------------------------------------------------|-----|
| 1   | Introduction .....                              | 175 |
| 1.1 | Related Work .....                              | 176 |
| 1.2 | Motivation and Contribution .....               | 177 |
| 2   | Theoretical Background .....                    | 178 |
| 2.1 | Image Partition .....                           | 178 |
| 2.2 | Image Watermarking .....                        | 179 |
| 3   | The Model .....                                 | 181 |
| 3.1 | C Factor Optimization .....                     | 182 |
| 3.2 | Code-Based Multiple Watermarking .....          | 183 |
| 3.3 | Repetitive Watermarking of Medical Images ..... | 184 |
| 3.4 | Architecture and Deployment .....               | 189 |
| 4   | Evaluation .....                                | 190 |
| 4.1 | Experimental Setup .....                        | 191 |
| 4.2 | Experimental Results .....                      | 195 |
| 4.3 | Discussion Over the Exhibited Results .....     | 204 |
| 5   | Conclusion .....                                | 206 |
| 5.1 | Potentials and Limitations .....                | 206 |
| 5.2 | Future Research .....                           | 207 |
|     | References .....                                | 208 |

## **The Minimum Cost Energy Flow Problem Under Demand Uncertainty. Effect on Optimal Solution, Variability, Worst- and Best-Case Scenarios .....**

Nick C. Poullos, Evangelos Melas, and Maria Livada

|     |                                          |     |
|-----|------------------------------------------|-----|
| 1   | Introduction .....                       | 211 |
| 2   | Problem Definition and Simulations ..... | 214 |
| 2.1 | Two Stations and Three Clients .....     | 214 |
| 2.2 | General Remarks .....                    | 215 |
| 2.3 | Simulation Particulars .....             | 216 |
| 3   | Simulation Results .....                 | 217 |
| 3.1 | Further Simulation Results .....         | 219 |
| 4   | Conclusions .....                        | 220 |
|     | References .....                         | 221 |

**A Mathematical Study of the Braess’s Paradox Within a Network  
Comprising Four Nodes, Five Edges, and Linear Time Functions ..... 223**  
Costas Poullos, Evangelos Melas, Nick C. Poullos, Maria Livada,  
and John Leventides

1 Introduction ..... 223

2 Braess Paradox ..... 224

3 A Four-Node Network with Linear Time Functions ..... 226

4 Results ..... 227

References ..... 232

**On Similiarities Between Two Global Optimization Algorithms  
Based on Different (Bayesian and Lipschitzian) Approaches ..... 233**  
Antanas Žilinskas

1 Introduction ..... 233

2 Algorithms Under Consideration..... 234

3 Interpretation of algorithms ..... 235

4 Conclusions ..... 237

References ..... 237
