Urban Form and Urban Heat Island

Towards a Cool Built Environment

Springer

Contents

1	Introduction	1
1.1	Research Background	1
1.1.1	Global Warming and Urbanization Change Urban Thermal Environment	1
1.1.2	Heat Island Effect Has Become a Significant Factor in Worsening Urban Climate Conditions	2
1.1.3	Urban Planning and Management Require Refined Strategies Aiming at Mitigating Urban Heat Island	3
1.2	Research Scope and Concept Definition	3
1.2.1	Research Scope	3
1.2.2	Urban Form	6
1.2.3	Heat Island Effect	7
1.3	Data Source	7
1.3.1	Land Surface Heat Island Intensity	7
1.3.2	Urban Form Indicators	9
1.4	Research Purpose and Significance	9
1.4.1	Research Purpose	9
1.4.2	Research Significance	11
1.4.3	Key Scientific Issues to Be Addressed	13
1.4.4	Research Content	13
1.4.5	Research Methods and Framework	15
1.5	Literature Review	16
1.5.1	Basic Route of Urban Form Research	16
1.5.2	Measurement of Urban Heat Island Effect	19
1.5.3	Research on the Formation Mechanism of Urban Heat Island Effect	24
1.5.4	Research on the Types of Urban Form Indicators Affecting Urban Heat Islands	30
1.5.5	Urban Heat Island Effect Prediction and Urban Form Optimization Research	39
1.5.6	Comprehensive Review of Related Research	44

1.5.7	Shortcomings of Existing Research	52
	References	53
2	Urban Heat Island Spatial Pattern and Urban Form Features of Different Heat Island Intensity Zones	57
2.1	Calculation of Heat Island Intensity	57
2.1.1	Land Surface Temperature Inversion	57
2.1.2	Calculation of Urban Heat Island Baseline and Zoning According to Urban Heat Island Intensity	60
2.2	Overall Spatial Pattern Characteristics of Heat Islands	62
2.2.1	“U” Shaped Ring Layer Differentiation with “High Inner and Outer, Middle Collapse”	62
2.2.2	Spatial Pattern of Hot Area	66
2.2.3	Aggregation of Hot and Cold Urban Areas	68
2.3	Spatial Distribution of Different Heat Island Intensity Areas	72
2.3.1	Location Distribution of Different Heat Island Intensity Areas	72
2.3.2	Landscape of Different Heat Island Intensity Area	74
2.3.3	Patch Association Between Different Heat Island Intensity Areas	75
2.4	Summary	76
	References	77
3	Key Urban Form Indicators Affecting Heat Island Intensity	79
3.1	Selection and Calculation Method of Urban Form Indicators	79
3.1.1	Indicator Selection	79
3.1.2	Calculation Method	80
3.2	Spatial Variation of Urban Form Indicators	84
3.2.1	Spatial Variation of Functional Development and Construction Combination Indicators on Urban–Rural Gradient	84
3.2.2	Spatial Pattern of Land Cover Indicators	88
3.2.3	Multi-axial Extension of Construction Intensity Class Indicators	89
3.3	Spatial Morphological Characteristics of Typical Heat Island Areas	91
3.3.1	Selection of Typical Heat Island Areas	91
3.3.2	Spatial Characteristics of Typical Extreme Heat Island Areas	97
3.3.3	Spatial Features of Typical Weak Heat Island Areas	103
3.4	Comparison of Urban Form Indicators in Different Heat Island Intensity Areas	111
3.4.1	Comparison of Functional Development Indicators	111
3.4.2	Comparison of Land Surface Cover Indicators	112
3.4.3	Comparison of Building Intensity Indicators	113

3.4.4	Comparison of Building Combination Indicators	114
3.5	Core Urban Form Indicators Selection	114
3.5.1	Selection Principles	114
3.5.2	Selection Results	116
3.5.3	Credibility Test	118
3.6	Summary	119
	References	120
4	The Mechanism of Urban Form Affecting Heat Island Effect	121
4.1	A Framework of the Mechanism Explanation	122
4.1.1	Theoretical Basis: Energy Balance in Local Canopy Space	122
4.1.2	Heat Conduction Mode: Human Heat Emission, Radiant Heat Gain, Convective Heat Dissipation	123
4.1.3	Mechanism Framework: Enhancement Mechanism, Damping Mechanism, and External Environment Factor Correction Mechanism	125
4.2	Mechanism of Urban Form Increasing Heat Island Intensity	128
4.2.1	Function Operation Increases Heat and Temperature: Industrial, Commercial, Residential Function Operation Increases Man-Made Heat Discharge	128
4.2.2	Artificial Surface Heat Exchange Warming: Buildings, Impervious Surfaces Absorb Solar Radiation, Increasing Radiative Heating	131
4.2.3	Building Combination Heat Concentration: Building Combination Slows Air Circulation, Restricting Convective Heat Dissipation	134
4.2.4	Different Urban Forms Increase the Effect of Heat Island Intensity	139
4.3	Mechanism of Urban Form Reducing Heat Island Intensity	141
4.3.1	Ecological Surface Heat Absorption Cooling: Ecological Surface Water Evaporation, Increasing Convective Heat Dissipation	141
4.3.2	Building Shadow Cooling: Reduced Openness Leads to Increased Shadow Area, Reducing Radiant Heat Absorption	144
4.3.3	The Effect of Different Urban Forms in Reducing Heat Island Intensity	145
4.4	Comprehensive Mechanism of Urban Form on Heat Island Intensity	145
4.4.1	Identification of External Environmental Factors	145
4.4.2	Comprehensive Impact and Spatial Effects	151

4.4.3	Comparison of the Impact of Various Urban Form Indicators	154
4.5	Summary	158
	References	160
5	Urban Form Regulation Techniques for Reducing Heat Island Intensity	161
5.1	Urban Form Indicator Warning and Optimization Techniques	162
5.1.1	Threshold Analysis of Each Indicator Affecting the Formation of High-Temperature Areas	162
5.1.2	Indicator Warning and Regulation Measures	168
5.2	Urban Form Guidance Technology for Different Types of Block	174
5.2.1	Block Type Division	174
5.2.2	The Correlation Between Urban Form Indicators and Heat Island Intensity in Different Types of Blocks	179
5.2.3	Urban Form Regulation of Different Types of Blocks	183
5.3	Urban Form Optimization Techniques for Special Function Zones	189
5.3.1	Avoid the “Overlapping Effect” Between High-Temperature Zones, Increase Green Coverage Along Main Roads and Concentrated Industrial Areas	189
5.3.2	Extend the Cooling Area of Water Bodies, Reduce the Construction Intensity of Waterfront Areas	189
5.4	Case Study on Reducing Heat Island Intensity—Taking Hualou Street Block as an Example	190
5.4.1	Analysis of Current Urban Form of Hualou Street Block and Control Indicators Identification	190
5.4.2	Thermal Environment of Hualou Street Neighborhood	192
5.4.3	Comparison of Thermal Environment in Multiple Renovation Modes	193
5.4.4	Comprehensive Optimization Plan Design and Thermal Environment Analysis	196
5.4.5	Urban Form Optimization Strategy	198
5.4.6	Chapter Conclusion	201
	References	203
6	Conclusion and Prospect	205
6.1	Research Conclusion	205
6.1.1	Spatial Pattern of Urban Heat Islands and Different Heat Island Intensity Zones	205
6.1.2	Core Urban Form Indicators Affecting Heat Island Intensity	206
6.1.3	The Comprehensive Mechanism of Urban Form Affecting the Heat Island Effect	206

Contents

6.1.4	Multidimensional Spatial Control Technology to Reduce Heat Island Intensity	207
6.2	Innovation	208
6.2.1	Construct a Core Urban Form Indicator System that Affects Heat Island Intensity	208
6.2.2	Reveal the Comprehensive Mechanism of Urban Form on the Heat Island Effect	208
6.2.3	Proposed a Differentiated Urban Form Control Technology to Reduce the Intensity of the Heat Island	209
6.3	Limitations and Prospects	209
6.3.1	Insufficient Research on the Impact of Urban Form on Heat Island Intensity Under Different Climatic Conditions	209
6.3.2	Insufficient Research on Planning and Design Strategies to Reduce Heat Island Intensity	209
