

Contents

1 Introduction	1
1.1 Fibrosis	1
1.1.1 Pathological fibrosis	1
1.1.2 Liver fibrosis	2
1.1.3 Mediators of inflammation and fibrogenesis	5
1.2 Acute kidney injury and hepatorenal syndrome	7
1.2.1 Acute kidney injury and chronic kidney disease progression	7
1.2.2 Hepatorenal syndrome (HRS)	9
1.3 Y-box protein 1	10
1.4 Common bile duct ligation model	12
1.5 Aim of study	14
2 Material	15
2.1 Devices	15
2.2 Consumables	16
2.3 Reagents	17
2.4 Kits	20
2.5 Antibodies	21
2.5.1 Primary antibodies	21
2.5.2 Secondary antibodies	21
2.6 Primers and probes	22
2.7 Plasmids	23
2.8 Cell lines	23
2.8.1 HUT78T	23
2.8.2 AML12	23
2.9 Bacteria	24
2.10 Software	24
3 Methods	25
3.1 Cell culture methods	25
3.1.1 Culture of eukaryotic cells	25
3.1.2 Cell counting	25
3.1.3 Transient transfection with electroporation	25
3.1.4 Stimulation of eukaryotic cells	26
3.1.5 Isolation and cultivation of granulocyte from mouse bone marrow	26

3.1.6 Isolation and cultivation of kidney tubular epithelial cells	27
3.2 Microbiological methods	28
3.2.1 Heat shock transformation of <i>E. coli</i> XL1-Blue	28
3.2.2 Plasmid isolation from <i>E. coli</i> XL1-Blue (Maxi-prep)	28
3.3 Molecular biology methods	29
3.3.1 RNA isolation from eukaryotic cells	29
3.3.2 RNA isolation from tissue and primary neutrophils	29
3.3.3 Measurement of nucleic acid concentration	30
3.3.4 Reverse transcription	30
3.3.5 Quantitative real-time polymerase chain reaction (qRT-PCR)	30
3.3.6 Chromatin immunoprecipitation (CHIP)	31
3.3.7 Luciferase reporter assay	32
3.3.8 Electrophoretic mobility shift assay (EMSA)	33
3.4 Protein biochemical methods	35
3.4.1 Protein lysis of eukaryotic cells	35
3.4.2 Protein lysis of tissue	35
3.4.3 Cytoplasmic and nuclear protein isolation of eukaryotic cells	36
3.4.4 Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS PAGE)	37
3.4.5 Protein concentration measurement with BCA assay	38
3.5 Animal experiment methods	38
3.5.1 Animal husbandry and care	38
3.5.2 Bile duct ligation model	39
3.6 Immunological methods	40
3.6.1 Western blot	40
3.6.2 Immunohistochemistry	41
3.6.3 Multiplex enzyme-linked immunosorbent assay (Multiplex-ELISA)	43
3.6.4 Flow cytometry analysis	44
3.7 Statistical analyses	45
4 Results	46
4.1 Liver cell-specific <i>Ybx1</i> deletion in mice	46
4.1.1 Characterisation of liver-specific deletion of <i>Ybx1</i>	47
4.1.2 Liver outcome of <i>Alb^{Cre}Ybx1^{fl/WT}</i> mice in the BDL model	52
4.1.3 Kidney outcome of <i>Alb^{Cre}Ybx1^{fl/WT}</i> mice in BDL model	53
4.2 Kidney cell-specific <i>Ybx1</i> deletion in mice	55

4.2.1 Verification of kidney-specific deletion of <i>Ybx1</i>	55
4.2.2 Liver outcome of <i>Pax8^{Cre}Ybx1^{fl/WT}</i> mice in BDL model	59
4.2.3 Kidney outcome of <i>Pax8^{Cre}Ybx1^{fl/WT}</i> mice in BDL model	61
4.3 Myeloid cell-specific <i>Ybx1</i> deletion in mice	64
4.3.1 Verification of immune cell specific deletion of <i>Ybx1</i>	65
4.3.2 Liver outcome of <i>LysM^{Cre}Ybx1^{fl/WT}</i> mice in BDL model	68
4.3.3 Kidney outcome of <i>LysM^{Cre}Ybx1^{fl/WT}</i> mice in BDL model	71
4.4 The role of YB-1 in neutrophil-tubular cell crosstalk	73
4.5 The role of YB-1 in <i>CXCL10</i> gene expression	75
5 Discussion	82
5.1 Hepatic YB-1 is profibrotic in livers	82
5.2 Renal tubular YB-1 plays a pro-fibrotic role and mediates injury in the kidneys	84
5.3 YB-1 in kidney-liver crosstalk	85
5.4 Myeloid YB-1 orchestrates organ injury	86
5.5 YB-1 regulates <i>CXCL10</i> expression	89
6 Summary	91
