

Table of Contents

- Abstract..... II**
- Introduction 1**
 - 1.1 Neurodevelopment 1
 - 1.1.1 Anatomy of the human brain 1
 - 1.1.2 Early neurodevelopment 1
 - 1.1.3 Neuronal migration 2
 - 1.2 Neurodevelopmental disorders..... 4
 - 1.2.1 Perturbation of neurodevelopmental key processes 4
 - 1.3 Proteostasis and the cellular chaperome 6
 - 1.3.1 TCP1 Ring Complex (TRiC)..... 6
 - 1.3.2 TRiC subunits and architecture..... 7
 - 1.3.3 TRiC-mediated substrate folding..... 8
 - 1.3.4 TRiC in cellular processes and diseases 10
 - 1.4 Aim of the study 12
- Experimental Procedures..... 13**
 - 2.1 Material..... 13
 - 2.1.1 Bacterial strain..... 13
 - 2.1.2 Eukaryotic cell lines 13
 - 2.1.3 Antibodies 13
 - 2.1.4 Fluorescent dyes..... 14
 - 2.1.5 Oligonucleotides 14
 - 2.1.6 Plasmids 15
 - 2.1.7 Enzymes 16
 - 2.1.8 Buffers and reagents 16
 - 2.1.9 Software 17
 - 2.2 Molecular biology: Cloning of TRiC missense variants 18
 - 2.2.1 cDNA synthesis 18
 - 2.2.2 Polymerase chain reaction 18
 - 2.2.3 Restriction digest 18
 - 2.2.4 Agarose gel electrophoresis and isolation of DNA fragments..... 19
 - 2.2.5 DNA ligation and heat shock transformation of *E. coli*..... 19
 - 2.2.6 Isolation of plasmid DNA..... 20
 - 2.2.7 Site-directed mutagenesis by overlap extension PCR 21

2.2.8 Sanger-Sequencing.....	22
2.3 Cell culture methods	22
2.3.1 Adherent cell culture	22
2.3.2 Cell cryopreservation	23
2.3.3 Transient transfection	23
2.3.4 RNA Isolation	23
2.3.5 Preparation of whole cell lysates	23
2.3.6 Preparation of lysates for proteome analysis	24
2.3.7 Measurement of mitochondrial membrane potential	24
2.3.8 Cell proliferation assay	24
2.3.9 Detection of reactive oxygen species	25
2.3.10 Scratch assay	25
2.4 Protein biochemistry.....	25
2.4.1 SDS-Polyacrylamide Gel Electrophoresis (SDS-PAGE)	25
2.4.2 Immunoblotting (Western Blot)	26
2.5 Fluorescence microscopy.....	27
2.5.1 Paraformaldehyde fixation	27
2.5.2 Immunocytochemistry.....	27
2.5.3 Aggresome staining	28
Results.....	29
3.1 <i>De novo</i> CCT3 variant causes brain malformations.....	29
3.1.1 CCT3 variants with detrimental effects in different taxa.....	30
3.2 TRiC variants in patient-derived fibroblasts	31
3.2.1 TRiC subunits and cytoskeletal isoforms are differentially expressed in patient-derived fibroblasts	33
3.2.2 Cellular growth is impaired in patient-derived fibroblasts	33
3.2.3 Cellular morphology is unaffected in patient-derived fibroblasts.....	35
3.2.4 Morphology of actin and tubulin is unaffected in patient-derived fibroblasts.....	36
3.2.4 Focal adhesions show no vinculin alterations in patient-derived fibroblasts.....	37
3.2.5 Mitochondrial function is not impaired in patient-derived fibroblasts	39
3.2.6 Autophagic flux is unaffected in patient-derived fibroblasts	41
3.3 Overexpression of TRiC missense variants in HeLa cells.....	42
3.3.1 Protein stability is impaired by CCT3 missense variant.....	42
3.3.3 CCT3-Q12R localises at the mitochondria	45
3.3.4 CCT3-Q12R expression shows no mitochondrial effects.....	48

3.3.5 Truncated CCT3 shows no mitochondrial localisation.....	49
3.3.6 CCT3-Q12R does not alter the subcellular localisation of TRiC	50
Discussion.....	52
4.1 <i>De novo</i> CCT3 variant causes brain malformations.....	53
4.1.1 CCT3 in different taxa	54
4.2 Investigation of further patient-derived fibroblasts.....	54
4.2.1 Growth of TRiC-impaired fibroblasts.....	55
4.2.2 Cytoskeleton in TRiC-impaired fibroblasts	56
4.2.3 Functional analysis of fibroblasts	59
4.3 TRiC missense variants in HeLa cells	60
4.3.1 Stability and localisation of TRiC missense variants	60
4.3.2 Functional effects of CCT3-Q12R expression.....	64
Conclusion	65
