

Contents

1	Introduction	1
1.1	Multivariate Data Analysis and Pattern Discovery	2
1.2	Multivariate Data Analysis and Linear Algebra	4
1.3	A Diversity of Classical Settings	6
1.4	Some Issues That Are Not Addressed in This Book But Are Related	9
1.5	Some Examples of Software Implementation	9
2	Principal Component Analysis (PCA)	11
2.1	Setting the Problem	13
2.2	Solving the Problem	14
2.3	Link with SVD	16
2.4	Randomized SVD	17
2.5	Core Algorithm for PCA	20
2.6	Interpretation and Plotting	22
2.7	Classical Analysis	25
3	Complements on PCA	29
3.1	Preliminaries	29
3.2	Statistical Approach	32
3.3	Factor Analysis and Probabilistic PCA	33
3.4	Distribution of Eigenvalues of Random Matrices	35
3.5	Unitarily Invariant Norms	38
4	PCA with Metrics on Rows and Columns	41
4.1	Euclidean Structure on the Space of Matrices $\mathbb{R}^{n \times p}$	42
4.2	Setting the Problem	44
4.3	Solving the Problem	45
4.4	Examples	49
4.5	Classical Analysis of a Matrix with Metrics and Weights: A Geometric Approach	51

5 Correspondence Analysis	55
5.1 Link with χ^2 Distance	56
5.2 Description of the Method	57
5.3 CoA and Geometry of Point Clouds	59
5.4 Classical Presentation	60
5.5 Geometric Approach	64
6 PCA with Instrumental Variables	67
6.1 Setting the Problem	69
6.2 Solving the Problem	69
6.3 Interpretation of PCAiv	73
6.4 Non-orthonormal Basis	75
6.5 PCA with Metrics and Instrumental Variables	75
7 Canonical Correlation Analysis	79
7.1 Stating the Problem	80
7.2 Solving the Problem	81
7.3 Computing the Solution	83
8 Multiple Canonical Correlation Analysis	89
8.1 Preamble	90
8.2 A Tight Link Between Canonical Analysis and PCA with Metric on Rows	90
8.3 Multiple Canonical Analysis	93
8.4 A Tight Link Between Canonical Analysis and Correspondence Analysis	96
8.5 Multiple Correspondence Analysis	98
8.6 Summary of Relationships Between Some Methods	99
9 Multidimensional Scaling	101
9.1 Overview	103
9.2 Setting the Problem	105
9.3 Solving the Problem	106
9.4 Dimension Reduction	107
9.5 Quadratic Embedding	109
A References in Textbooks	117
Appendix B	119
B.1 Preliminaries in Linear Algebra	120
B.2 Euclidean Vector Space	128
B.3 Quadratic Forms	132
B.4 Primer in Multilinear Algebra	134
B.5 Random Projection	141
Bibliography	149
